Course Contents	De student verwerft inzicht in de histologie, fysiologie en functie van het endocrien systeem. Het endocrien systeem speelt een belangrijke rol bij de regeling van de fysiologische processen in het menselijke lichaam. Behandeld wordt hoe hormonen de stofwisselingsprocessen en glucose homeostase reguleren, wat de belangrijkste endocriene assen (hersenenhypothalamus-hypofyse-perifeer endocrien orgaan) zijn, en hoe calcium- en botstofwisseling hormonaal worden gereguleerd. Daarnaast worden stoornissen in het endocriene systeem behandeld, met o.a. ziektebeelden die gepaard gaan met een verhoogde- of verlaagde hormoon productie (diabetes, hypo- en hypercortisolisme, hypo- en hyperthyreoïdie), alsmede osteoporose. De regulerende functie van het endocrien systeem wordt in de normale, gezonde situatie geïntroduceerd aan de hand van de elementaire aspecten van de regeltechniek. Daartoe worden de regeltechnische begrippen geïntroduceerd (lineariteit, input-output en toestandsbeschrijving van dynamische systemen middels blokdiagram en vergelijkingen) die de student in staat stellen om de fysiologische processen in op vereenvoudigde wijze te modelleren. De communicatie in de endocriene regelkring vindt plaats door middel van boodschappen in de vorm van chemische signalen, zoals hormonen door kliercellen. Additionele regeltechnische begrippen worden geïntroduceerd om de invloed van deze signalen op het systeemgedrag te kunnen begrijpen en analyseren: overdrachtsfunctie, dynamische responsie, Laplace-domein oplossingen van responsies, polen en nulpunten van systemen. Implementatie, simulatie en verificatie van dynamische modellen en regelsystemen wordt gedaan met behulp van Python (notebooks).	
Study Goals	Aan het eind van dit vak kan de student: - de hormonale regelmechanismen van stofwisselingsprocessen, incl. glucosehomeostase beschrijven, in de normale situatie en bij disregulatie - de principes van de endocriene assen beschrijven en deze toepassen op de hypothalamus-hypofysebijnier-en schildklier-as in de normale situatie en bij disregulatie - de principes van calcium- en botmetabolisme beschrijven - de diagnostiek en behandeling beschrijven bij patiënten met schildklier- en bijnier aandoeningen en bij patiënten met osteoporose - Understand the principals of modeling and feedback control systems - Represent the dynamical systems in the time-domain state-space framework, recognize differences between linear and non-linear systems and make use of linearization techniques - Compute (Obtain) the response of a LTI system in the frequency domain - Understand the concept of stability - Assess the stability and design a stabilizing controller for a closed-loop LTI system in the frequency domain - Use Python to simulate responses of linear and nonlinear systems. - Recognize the principles of feedback control systems in the function of the endocrine systems	
Study Goals continuation	Bijdragen aan de eindtermen zijn terug te vinden in het blokboek.	
Education Method	- Hoorcolleges (NB: sommige hoorcolleges zullen in het Engels gegeven worden) - Werkcolleges (begeleid werken aan opdrachten, mogelijk spreekt een deel van de staf geen Nederlands) - Vaardigheidsonderwijs - Quizzes (vrijdagmiddag) waarmee een kleine bonus op het eindcijfer verdiend kan worden.	
Literature and Study Materials	Een actuele beschrijving van de opdrachten en de te kiezen cases (vaardigheidsonderwijs en zelfstudieopdrachten) zijn beschikbaar op Brightspace. Daarnaast wordt eventuele extra informatie beschikbaar gesteld op Brightspace. Voorgescreven boeken: 9781975115364 Ross MH, Pawlina W Histology International Edition Uitgave/jaar: 2019 , druk/editie: 8 9780323353175 Kumar V, Abbas AK, Aster JC Robbins Basic Pathology Uitgave/jaar: 2017 , druk/editie: 10 9781455743773 Boron WF, Boulpaep E Medical Physiology Uitgave/jaar: 2009 , druk/editie: 3 Aanvullend materiaal: 978-0-691-13576-2 Aström, K.J.; Murray, R.M. Assessment	Het eindcijfer is opgebouwd uit de volgende onderdelen: - Schriftelijk tentamen - Wekelijkse quizvragen waarmee 10% bonus verdiend kan worden.	
Permitted Materials during Tests	Er mag een handgeschreven A4 (dubbelzijdig) formuleblad en een niet-grafische rekenmachine worden gebruikt. Op het formuleblad mogen alleen formules staan die relevant zijn voor het regeltechnische deel van dit vak en schetsen van stapresponsies. Tekst (anders dan bedoeld om de formules te ordenen) op dit blad is niet toegestaan.	
Enrolment / Application	Om deel te kunnen nemen aan dit vak dient er tijdig te worden aangemeld. Een aanmelding voor een vak is niet gelijk aan een aanmelding voor een (deel)tentamen, inschrijving in brightspace of een inschrijving voor een studie in studielink. Meer informatie over aanmelden voor vakken, de procedure en actuele deadlines kun je terugvinden op; https://www.tudelft.nl/studenten/onderwijs/vakken-en-tentamens Aanmelden voor tentamens dient apart te gebeuren.	

Department	*in sommige gevallen gelden er ingangseisen of aanvullende criteria om toegelaten te worden tot een vak. Deze zijn terug te vinden in de OER van de opleiding; zie Judgement
Judgement	BSc Clinical Technology (joint-degree)
Contact	Voor actuele reglementen, richtlijnen en regelingen (o.a. aanmelding onderwijs en geldigheid van behaalde cijfers)verwijzen we je naar de Onderwijsreglementen; http://onderwijs.3me.tudelft.nl/reglementen
	Er kan contact worden opgenomen met de blokcoördinatoren via de in het blokboek verstrekte emailadressen.
