

# Program overview

08-Dec-2022 11:24

**Year** 2022/2023  
**Organization** Electrical Engineering, Mathematics and Computer Science  
**Education** Bachelor Computer Science and Engineering

| Code                             | Omschrijving                             | ECTS | p1 | p2 | p3 | p4 | p5 |
|----------------------------------|------------------------------------------|------|----|----|----|----|----|
| <b>B-TI 2022</b>                 |                                          |      |    |    |    |    |    |
| <b>Bachelor 1st year TI 2022</b> |                                          |      |    |    |    |    |    |
| CSE1000                          | Mentoring                                | 0    |    |    |    |    |    |
| CSE1100                          | Object-oriented programming              | 5    |    |    |    |    |    |
| CSE1105                          | OOP Project                              | 5    |    |    |    |    |    |
| CSE1110                          | Software Quality and Testing             | 5    |    |    |    |    |    |
| CSE1200                          | Calculus                                 | 5    |    |    |    |    |    |
| CSE1205                          | Linear Algebra                           | 5    |    |    |    |    |    |
| CSE1210                          | Probability Theory and Statistics        | 5    |    |    |    |    |    |
| CSE1300                          | Reasoning and Logic                      | 5    |    |    |    |    |    |
| CSE1305                          | Algorithms and Data Structures           | 5    |    |    |    |    |    |
| CSE1400                          | Computer Organisation                    | 5    |    |    |    |    |    |
| CSE1405                          | Computer Networks                        | 5    |    |    |    |    |    |
| CSE1500                          | Web and Database Technology              | 5    |    |    |    |    |    |
| CSE1505                          | Information and Data Management          | 5    |    |    |    |    |    |
| <b>Bachelor 2nd year TI 2022</b> |                                          |      |    |    |    |    |    |
| CSE2000                          | Software Project                         | 15   |    |    |    |    |    |
| CSE2115                          | Software Engineering Methods             | 5    |    |    |    |    |    |
| CSE2120                          | Concepts of Programming Languages        | 5    |    |    |    |    |    |
| CSE2215                          | Computer Graphics                        | 5    |    |    |    |    |    |
| CSE2220                          | Signal Processing                        | 5    |    |    |    |    |    |
| CSE2225                          | Image Processing                         | 5    |    |    |    |    |    |
| CSE2230                          | Multimedia Analysis                      | 5    |    |    |    |    |    |
| CSE2310                          | Algorithm Design                         | 5    |    |    |    |    |    |
| CSE2315                          | Automata, Computability and Complexity   | 5    |    |    |    |    |    |
| CSE2420                          | Digital Systems                          | 5    |    |    |    |    |    |
| CSE2425                          | Embedded Software                        | 5    |    |    |    |    |    |
| CSE2430                          | Operating Systems                        | 5    |    |    |    |    |    |
| CSE2510                          | Machine Learning                         | 5    |    |    |    |    |    |
| CSE2520                          | Big Data Processing                      | 5    |    |    |    |    |    |
| CSE2525                          | Data Mining                              | 5    |    |    |    |    |    |
| CSE2530                          | Computational Intelligence               | 5    |    |    |    |    |    |
| <b>Bachelor 3rd year TI 2022</b> |                                          |      |    |    |    |    |    |
| CSE3000                          | Research Project                         | 15   |    |    |    |    |    |
| CSE3100                          | Functional Programming                   | 5    |    |    |    |    |    |
| CSE3130                          | Introduction to Quantum Computer Science | 5    |    |    |    |    |    |
| CSE3210                          | Collaborative Artificial Intelligence    | 5    |    |    |    |    |    |
| CSE3230                          | Algebra and Cryptography                 | 5    |    |    |    |    |    |
| CSE3300                          | Algorithms for NP-Hard problems          | 5    |    |    |    |    |    |
| CSE3500                          | Human Computer Interaction               | 5    |    |    |    |    |    |

|                     |                                                                 |

**Contact for students**

Please note! The answers to a lot of your questions can be found on the internet <https://www.tudelft.nl/en/student/>.

Are you a first year student and did you not find the answer to your question? Contact one of your mentors first.

For students that are not in their first year the first person to contact in case you have any question is the commissioner of education of CSE ([coi@ch.tudelft.nl](mailto:coi@ch.tudelft.nl)). They know the answer to a lot of questions but can also point you towards other people in the faculty or check with them in case of any problems.

During the whole study programme there are General Assemblies: in the first year each quarter and for the higher years each semester. The meetings will be announced on Brightspace and are also scheduled in your timetable.

For questions regarding help and support for personal problems or study delay all students can contact the academic counsellors: <https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/organisation/academic-counsellors/>.

For answers regarding questions about specific courses, first go to the Brightspace page of the course and if you can't find the answer there, contact the responsible lecturer.

Would you like to participate in improving the study programme? Sign up for the so called lecture-response-group (collegeresponsiegroep) of your year. Contact the commissioner of education for more information.

EWI

**In association with the Faculty of****Term of validity**

Please note! The information provided here is informative and not binding. Binding information can be found in the regulations <https://www.tudelft.nl/en/student/legal-position/regulations/>.

**Program Goals**

1. The CSE programme aims to:  
educate students so that they can obtain a Bachelor of Science degree in Computer Science & Engineering  
enable students to gain admission to one of the Masters programmes following on directly from the Bachelors programme, including the Masters programmes in Computer Science, Computer Engineering and Embedded Systems.

Once you have finished the programme Computer Science & Engineering (CSE) the graduate:

has knowledge of the core concepts and basic methods of the field of computer science such as programming, software engineering, logic, fundamental computer science, databases, web technology, computer systems and networks, information systems and artificial intelligence;

has the necessary mathematical knowledge, such as a knowledge of calculus, linear algebra, probability theory and statistics;

is aware of the role of computer science in its application fields;

can apply the above-mentioned knowledge to problems of limited complexity in the field of computer science and its application fields.

has been introduced to research and in particular to modelling in the field of computer science, i.e.

- can analyse problems in order to produce a research plan;

- can use scientific literature to find solutions to studied problems;

- can adapt and implement these solutions.

has a systematic approach in designing software and software systems:

can formulate the requirements to be fulfilled by software and software systems;

can take and substantiate design decisions, taking into account technical, ethical

preconditions and socio-economic consequences;

can effectively model the aspects involved;

can choose and apply a suitable software engineering method in order to implement and test that system.

is inquisitive and has an attitude of lifelong learning;

has a systematic approach, e.g. in hypothesis driven problem solving or engineering

software;

has the knowledge and the skills to use, justify and assess concepts and theories in computer science as to their value for research and can adapt these for his or her own use;

has insight into the scientific practice in computer science (research system, relation with clients, publication system, importance of integrity, etc.);

knows the methods and techniques used in the scientific practice of computer science and

can apply them under supervision;

is aware of the limitations of science.

can adopt a critical approach towards and deliberate on his or her own arguments as well as those of others in order to subsequently arrive at a well-founded position;

can recognize and use reasoning methods, ask the right questions, and make and

understand qualitative and quantitative statements in the field of computer science.

can work in a professional manner within an international team to solve complex software

design problems with fellow computer scientists or others;

can present the results of the work both orally and in writing to fellow computer scientists

or others.

can analyze and discuss the socio-economic, ethical and legal consequences that ill-considered, incorrect or poorly designed

systems can have;

can account for a developed computer science artefact (software, algorithm, database, system, etc.) with respect to the responsible use of data and algorithms and the software

development process followed.

**Program Structure 1**

The duration of the study programme in CSE is three years (3 x 60 EC). The first year consists of 12 courses of 5 EC each: 11 regular courses and 1 project. The second year consists of 11 courses: 6 regular courses of 5 EC, a so called Variant (= three consecutive courses) of 15 EC and a large project of 15 EC. The third year is different from the first two years. The first semester you will follow a minor (see below) and then there are 3 courses left of each 5 EC. The last part of the programme consists of the CSE3000 Research project of 15 EC.

Each year is divided into four quarters with a length of 10 weeks and during each quarter you have three courses of 5 EC in parallel. It is expected that during these 10 weeks you spend 40 hours studying. This means you have to study around 13 hours for each course, each week. But of this may vary. Not all the hours are planned in your timetable, you need to do a lot of independent planning and studying.

**Program Structure 2**

CSE students and their professors are part of the academic community of the TU Delft. Each community has rules of behaviour and the TU Delft has laid them down in the Code of Ethics: <https://www.tudelft.nl/en/student/legal-position/education-regulations/code-of-ethics>. The following rules are from this code:

|                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>Exam requirements</b>                | <p>The exam requirements specify under which circumstances you are eligible for a CSE diploma. You can find them in the Rules &amp; Regulations of the Board of Examiners <a href="https://www.tudelft.nl/en/student/eemcs-student-portal/education/rules-regulations">https://www.tudelft.nl/en/student/eemcs-student-portal/education/rules-regulations</a>. In summary, it is written that you can may receive your CSE diploma when you have passed all courses, included the minor, with a grade of 6 or higher.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>With Honours Regulation</b>          | <p>Once you have finished the Bachelor programme you can request your diploma with a form on the following website: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/forms/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/forms/</a>.</p> <p>Students who have completed their Bachelor CSE within the three years and who have an average for all the courses, not including the Bachelor Thesis Project of at least a 8 and who have at least a 8 for the Bachelor Thesis Project will receive a diploma with distinction.</p> <p>The exact rules can be found in the Rules and Guidelines of the Exam Commission (<a href="http://studenten.tudelft.nl/en/eemcs/regulations/">http://studenten.tudelft.nl/en/eemcs/regulations/</a>).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Administration by the Faculty of</b> | EWI                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Minor Semester</b>                   | In the first half of your third year you will follow a minor. The minor gives you the possibility to broaden your knowledge or to go abroad and gain experience in living and studying in another country.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Expected prior Knowledge</b>         | <p>More information can be found on <a href="https://www.tudelft.nl/en/education/programmes/minor/">https://www.tudelft.nl/en/education/programmes/minor/</a>.</p> <p>The admission requirements for the study CSE can be found at the Central Student Administration.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Education Methods</b>                | <p>Lecturers of the CSE programme use many different education methods, depending on the course material that has to be taught. The most frequently used education methods are listed below:</p> <ul style="list-style-type: none"> <li>- Lecture: the lecturer gives a presentation about the material in a lecture room. Often the lectures are complemented with homework assignments.</li> <li>- Instructions: during instructions you can work on assignments with the help of lecturers and teaching assistants. The groups are kept small so you have the opportunity to ask questions.</li> <li>- Interactive lecture: an interactive lecture is a combination between a lecture and an instruction. The professor explains material regarding assignments while in between the explanations you get the chance to work on the assignments.</li> <li>- Practical/lab: during a practical or lab you work (mostly independently) on programming assignments and practical problems with the help of teaching assistants.</li> <li>- Project: a project is a practical assignment you solve with a group. Usually, at the end of a project a deliverable has to be handed in. Teamwork is an important part of a project.</li> <li>- Independent study: For all the discussed methods mentioned above it is essential that you are the one doing the work. Only this way you will be able to apply the things that you have learned by yourself.</li> </ul> |
| <b>Honours track</b>                    | <p>For students who are looking for something more challenging it is possible to join the Honours Programme Bachelor (HPB) in the second year. It is directly accessible to students who have finished all the courses of the first year within one year with an average grade of at least an 8,0.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

### Bachelor 1st year TI 2022

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Prerequisites</b>  | Please note! The entry requirements are mentioned in the regulations <a href="https://www.tudelft.nl/en/student/eemcs-student-portal/education/rules-regulations">https://www.tudelft.nl/en/student/eemcs-student-portal/education/rules-regulations</a> . If there are differences between what is mentioned here and what is mentioned in the regulations, that what is mentioned in the regulations is binding.                                                                                                                                          |
| <b>Introduction 1</b> | <p>Registration for exams</p> <p>For the exams of all the courses you have to register at least two weeks before the day that they take place. More information is available on: <a href="https://www.tudelft.nl/en/student/eemcs-student-portal/education/registration-courses-and-examinations">https://www.tudelft.nl/en/student/eemcs-student-portal/education/registration-courses-and-examinations</a>.</p> <p>If you decide after your register that you dont want to participate in the course or exam dont forget to cancel your registration.</p> |
| <b>Introduction 2</b> | <p>As is the case for all the programmes of the TU Delft, also for CSE you must obtain at least 45 EC in your first year. This is called the binding recommendation on continuation of studies (BSA).</p> <p>For more information go to: <a href="https://www.tudelft.nl/en/student/legal-position/regulations/">https://www.tudelft.nl/en/student/legal-position/regulations/</a>.</p>                                                                                                                                                                     |
| <b>Introduction 3</b> | <p>Preview year 2:</p> <p>In the last quarter of the first year you will choose a so called Variant that you will follow during the first three quarters of your second year. More information on the Variants can be found on the study guide pages about the second year and will be shared during the General Assemblies.</p>                                                                                                                                                                                                                            |

| CSE1000                                | Mentoring                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0 |

| <b>Course Contents</b>                 | Students are divided into groups (~15 students) with accompanying student and teacher mentor. These mentor groups meet in the first quarter one time per week (around the lunch time) and discuss important issues such as time management, learning to study, fraud, exams, etc. Additionally, depending on choice, individual meetings with each student are performed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Study Goals</b>                     | <ul style="list-style-type: none"> <li>- Creation of social safety net</li> <li>- Offering support in studying</li> <li>- Promotion of an active studying attitude</li> <li>- Making student aware of own study attitude and helping in fostering an active studying attitude</li> <li>- Supporting students by means of individual attention and monitoring ("keeping fingers on the pulse")</li> <li>- Discussion of topics important for studying such as preparation and making of exams, discussion of fraud, BSA, etc.</li> </ul>                                                                                                                                                                                                                                                                                                    |   |
| <b>Education Method</b>                | Weekly mentor group meetings (in Q1), bi-weekly mentor group meetings (in Q2), and individual face to face meetings with each student.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Assessment</b>                      | By means of verifying obligatory presence on the mentor meetings and the completion of the assignments associated with the mentorate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Enrolment / Application</b>         | <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p> <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. | <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Course Contents</b>                 | <p>Primitive datatypes: value domains, operators, expression, type conversions, declarations and assignments.<br/> Control structures (selection and repetition): conditional selection (single, two-fold and multiple statements), repetition (pretest and posttest loops).<br/> Composition of data: arrays, Strings, ArrayLists, Sets.<br/> Classes: specification and implementation.<br/> Inheritance: modeling inheritance, type casts, redefining methods, static and dynamic binding.<br/> Use of libraries (APIs): e.g., to work with files, network, multi-threading.<br/> Implementation of small programs.<br/> Testing of small programs with unit testing.<br/> Debugging strategies.<br/> A selection of more advanced programming topics.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Study Goals</b>                     | <p>After completing this course, the student:</p> <ul style="list-style-type: none"> <li>- Can describe the key characteristics of object-oriented programming.</li> <li>- Can write methods and classes using the Java programming language.</li> <li>--- Can write methods and classes using correct indentation and coding style.</li> <li>--- Can write an equals method for a class using the Java programming language.</li> <li>--- Can create and manipulate a data structure using methods and classes.</li> <li>- Can design, implement and debug a simple program that contains inheritance and interfaces using the Java programming language.</li> <li>- Can design, implement and debug a simple program that reads from files, and writes to files using the Java programming language.</li> <li>- Can write unit tests for a program in Java using the Junit testing framework.</li> <li>- Can effectively search for existing packages, classes and programming solutions, using the Java documentation as well as online resources, and apply this information in their own programs.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Education Method</b>                | <p>Lectures, tutorials, and practical sessions with programming exercises.</p> <p>The programming exercises are feedback assignments, i.e., they do not count towards your grade, but you can get feedback on them to improve your programming skills.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Assessment</b>                      | <p>This course contains two summative exams:</p> <ol style="list-style-type: none"> <li>1) Theoretical exam in Weblab (MC, Open &amp; (Small) Programming questions; no auxiliary materials may be used).</li> <li>2) Programming exam (Open book, IDE &amp; additional resources/documentation allowed).</li> </ol> <p>This course contains two formative tests. These do not count towards your final grade, but allow you to practice programming in a real exam environment:</p> <ol style="list-style-type: none"> <li>1) A Midterm Theoretical Exam (in week 5).</li> <li>2) A Mock Programming Exam (in week 8).</li> </ol> <p>Between the two formative tests you can score a bonus of at most 0.5 points on your final grade. For both the Midterm and the Mock Exam you get a score of at most 0.5 bonus points. Your final bonus is calculated as: MIN(0.5, Midterm Bonus + Mock Exam Bonus), this means the bonus on top of your final grade is capped at 0.5 points.</p> <p>Your final grade is composed of:</p> <ol style="list-style-type: none"> <li>1) The Theoretical Exam (weight 0.5, minimal required grade 5/10)</li> <li>2) The Programming Exam (weight 0.5, minimal required grade 5/10)</li> </ol> <p>If your score for the Theoretical Exam and Programming Exam are (1) both minimally a 5/10 and (2) the average of both is at least 5.75, you pass this course.</p> <p>If you scored any bonus for the formative tests, this final bonus with ONLY be applied if you pass the course based on your grades for the Theoretical Exam and Programming Exam. You CANNOT compensate a failing grade with your bonus points.</p> <p>Within the academic year you can resit the Theoretical Exam and the Programming Exam in quarter 2. Out of the two attempts for the Theoretical Exam and the Programming Exam respectively, the highest score will count towards your final grade. Partial grades for the Theoretical Exam or Programming Exam cannot be carried over to a next academic year.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p> |   |
| <b>Enrolment / Application</b>         | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |

| <b>Course Contents</b>                 | <p>Modern software development is not just about knowing the right programming language or the right technology stack. It is as important to know how to work together in a team to get a serious programming project done.</p> <p>In this course, you will learn how to collaboratively create a software system. The contents of this course range from learning about teamwork, analyzing the informal requirements of a client, using popular collaboration tools like GitLab to plan and track project progress, using collaborative tools like Git, to learning popular frameworks and libraries to bring the project to success. You will also learn how to evaluate the usability of an application.</p> <p>The first weeks of the course will be structured through lectures to get you and your group started, afterwards, the course will transition into the implementation phase, in which you will work on the project. Every group will be closely supervised by a tutor.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Study Goals</b>                     | <p>After completing this course, you will be able to ...</p> <ol style="list-style-type: none"> <li>1) Act professionally in a team of software developers <ul style="list-style-type: none"> <li>... Get insight into how you work in a team and make agreements</li> <li>... Chair a meeting and take minutes</li> <li>... Give and receive feedback</li> </ul> </li> <li>2) Manage a complex software project in a group <ul style="list-style-type: none"> <li>... Infer and formalize requirements from an informal client description</li> <li>... Plan and manage the project tasks in GitLab</li> <li>... Organize and distribute tasks between team members</li> </ul> </li> <li>3) Follow a collaborative software engineering process <ul style="list-style-type: none"> <li>... Use Git to version and share source code contributions</li> <li>... Contribute source code to a group project through GitLab merge requests</li> <li>... Evaluate code contributions of other team members in GitLab merge requests</li> </ul> </li> <li>4) Create a distributed application from a provided set of project requirements <ul style="list-style-type: none"> <li>... Build a distributed application with Spring Boot</li> <li>... Build a graphical client with Java FX</li> <li>... Exchange data through REST and web sockets using an object mapper like Jackson</li> <li>... Manage the lifecycle of an application through dependency injection</li> <li>... Implement reactive REST clients with long-polling</li> <li>... Write unit tests for a distributed software system</li> </ul> </li> <li>5) Evaluate the design of a user interface with a heuristic usability evaluation</li> </ol>                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Education Method</b>                | <p>Following this course will require you to...</p> <p>Follow interactive lectures and pre-recorded material for self-study<br/> Participate in a collaborative programming project in a small team<br/> Assess the work of yourself and others through peer reviews<br/> Actively participate in tutor sessions<br/> Run a usability evaluation and document it in a report<br/> Pitch your project results in a short video</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Assessment</b>                      | <p>--- Formative Assessment ---</p> <p>You will receive feedback on the individual learning progress and success through weekly rubrics<br/> You will discuss your individual learning progress and success in weekly tutor meetings</p> <p>--- Individual Knock-Out Elements ---</p> <p>Not reaching the following criteria will lead to a removal/fail:</p> <p>Upholding a professional attitude when interacting with peers and staff.<br/> Attending all tutor meetings (Absence will only be excused on a case-by-case basis, when a valid reason has been indicated before(!) missing a meeting)<br/> Completing all individual assignments<br/> ... Passing the Git assignment<br/> ... Having an accepted merge request of reasonable size<br/> ... Constructive participation in all peer reviews<br/> Actively participating in the team process<br/> ... Visibly contributing to the project throughout all weeks of the project (i.e. commits and merge-request activity)<br/> ... Contributing a substantial (source-code) feature to the final product<br/> ... Contributing to all team deadlines and deliverables<br/> ... Receiving a positive evaluation in final peer review<br/> Ability to explain lecture contents and defend all aspects of the team project in the oral examination</p> <p>--- Summative Assessment ---</p> <p>40% Process (focus: How well did the group work together?)<br/> Teamwork<br/> Backlog<br/> Planning and task distribution in GitLab<br/> Code contribution and code reviews</p> <p>15% Usability Report (focus: heuristic usability evaluation)</p> <p>40% Product (focus: How well has the application been implemented?)</p> <p>5% Project-Pitch Video &amp; Oral Examination (focus: clarification and fraud prevention)</p> <p>--- Please Note ---</p> <p>All assignment deadlines throughout the course are fixed. We do not allow late-submissions and do not offer repair options.<br/> The listed (sub-) points of the summative assessment represent grading components. ALL must be passed to receive a positive</p> |   |

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>Enrolment / Application</b> | <p>In addition to your regular enrollment of the course, you must also register in Brightspace, AT THE LATEST during the first lecture, so you can be assigned to a group. Late registrations after the group creation cannot be considered anymore.</p> <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE program or an EEMCS bridging program (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE). Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p> |

| <b>Course Contents</b>                 | <p>The course covers the most important testing techniques needed to build high quality software systems. The course covers both the testing techniques themselves, and the software design techniques needed to create testable systems.</p> <p>Specific topics covered are:</p> <ul style="list-style-type: none"> <li>* testing principles, test levels, and the testing pyramid</li> <li>* software testing automation and JUnit</li> <li>* specification-based testing, equivalence partitioning and domain testing</li> <li>* boundary analysis and testing</li> <li>* property-based testing</li> <li>* structural testing and the different coverage criteria</li> <li>* mock objects</li> <li>* design for testability</li> <li>* test-driven development (TDD)</li> <li>* test code quality and test smells</li> <li>* larger tests</li> </ul>                                                                                                                                                                                                                           |          |
| <b>Study Goals</b>                     | <p>We expect students to be able to:</p> <ul style="list-style-type: none"> <li>* Create unit, integration, and system tests using current existing tools (i.e., JUnit, Mockito, and JaCoCo) that effectively test complex software systems.</li> <li>* Derive test cases that deal with exceptional, corner, and bad weather cases by performing different testing techniques as well as able to reflect about their limitations, when and when not to apply them in a given context.</li> <li>* Measure and reflect on the efficiency of the developed test suites by means of different test adequacy metrics (i.e., line, branch, condition, MC/DC coverage).</li> <li>* Design and implement testable software systems by means of architectural patterns such as dependency injection, and ports and adapters.</li> <li>* Write maintainable test code by avoiding well-known test code smells.</li> <li>* Understand the principles of state-of-the-art techniques for intelligent software testing, such as mutation testing and search-based software testing.</li> </ul> |          |
| <b>Education Method</b>                | <p>This course follows a flipped classroom approach. Students read chapters of the book and work on (practical and theoretical) exercises during their study time; lectures are used for questions and broader discussions.</p> <p>We offer TA support during the labs.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |          |
| <b>Books</b>                           | Effective Software Testing, by Maurício Aniche: <a href="https://www.effective-software-testing.com">https://www.effective-software-testing.com</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |          |
| <b>Assessment</b>                      | <p>The evaluation of the course is based on one midterm and one final exam. Both happen in WebLab and are composed of coding questions and theoretical questions. Students can consult the documentation of certain testing libraries during the exams.</p> <p>The midterm is optional and its grade might be replaced by the exam's grade. See the formula:</p> $\text{Course grade} = 0.2 * \max(\text{midterm}, \text{endterm}) + 0.8 * \text{endterm}$ <p>We offer resits for the final exam. We do not offer resits/second chances for the midterms.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |          |
| <b>Enrolment / Application</b>         | <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p> <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE). Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p>                                                                                                                                                                                                                                                |          |

| <b>Expected prior knowledge</b>        | Reasoning & Logic, High school mathematics.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Course Contents</b>                 | The main objective of this course is to provide a solid basis of mathematical concepts and skills that will be necessary in the rest of the Bachelor Computational Science. The material treated in this course plays an important role in courses such as Algorithms and Data Structures, Linear Algebra, Computer Graphics, Probability and Statistics, Signal Processing and Image Processing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Study Goals</b>                     | <p>Here is a list of topics that will be treated in this course, and the associated learning objectives.</p> <p>Understanding of functions. The student can determine domain, range and inverse of a given function, and sketch its graph. The student can simplify compositions of functions, in particular in case of (inverse) trigonometric functions.</p> <p>Limits. The student knows and understands the concept of limits as well as the associated rules of calculation. The student can evaluate limits. The students knows the conditions under which 'Hospitals Rule' can be applied, and can apply the rule in these cases.</p> <p>Differentiation. The student knows the rules of calculation for differentiation, in particular the Chain Rule. The student can apply those to determine derivatives (first order and higher) of a given function, if necessary by implicit differentiation. The student can determine linearisations and differentials of functions.</p> <p>Integration: The student knows and understands the definition of an integral in terms of Riemann sums, and can apply the Fundamental Theorem of Calculus to calculate integrals. The student knows the rules of calculation for integration, in particular the Substitution Rule and Integration by parts, and can employ these to find anti-derivatives and evaluate integrals.</p> <p>Sequences and Series. The student can determine convergence and limits of a (possible recursively defined) sequence. The student masters techniques, in particular the Comparison test, Alternating Series Test and the Ratio Test, to determine convergence and absolute convergence of a given series. The student can determine the radius of convergence and interval of convergence of a given power series. The student is able to determine the limit of certain types of (power) series.</p> <p>Complex numbers. The student knows the rules of calculation for complex numbers and can apply those to solve algebraic equations. The student knows and can apply Euler's Identity and De Moivre's Rule.</p> <p>Multivariate functions. The student can sketch and interpret graphical representations of functions of several variables. The student can determine linearisations, tangent planes, directional derivatives, gradient and local extrema of multivariate functions.</p> <p>Integration of multivariate functions. The student can evaluate the integral of a function in two variables on a simple region and interpret the answer.</p> |   |
| <b>Education Method</b>                | Every week, there will be 6 hours of lectures for this course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Books</b>                           | <p>For the course material and exercises we use the book "Calculus: Early Transcendentals", Interational Metric Edition, 9th edition, by James Stewart.<br/>ISBN: 978-1-305-27237-8</p> <p>PLEASE NOTE: the use of older edition may cause problems, since the numbering of exercises and sections varies between editions.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Assessment</b>                      | <p>The final grade of this course is determined by two tests; one in week 2.5 and one in week 2.10.</p> <p>There will be one overall retake. It is not possible to do a retake for separate tests.</p> <p>After the final test, the final grade for this course is calculated as follows:</p> $(\text{grade test 1})/3 + 2 * (\text{grade test 2})/3$ <p>The course is passed if this grade is 5.75 or higher AND the grade of the second test is 5 or higher.</p> <p>If the grade for the resit is higher than the final grade, it will replace the final grade.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Enrolment / Application</b>         | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. | <b>Study Goals</b>                      | <p>An important goal of the course is to make the student comfortable with fundamental notions from linear algebra. At the end of this course you will be able to understand the connections between these concepts. You may also be asked to come up with proofs for elementary properties (i.e. write down a consistent/correct short proof) and give a correct counterexample.</p> <p>After successfully completing the course you will be able to:</p> <ul style="list-style-type: none"> <li>- Solve systems of linear equations.</li> <li>- Identify if a system of linear equations is solvable, and if the solution is unique.</li> <li>- Show the equivalence between a vector equation, a matrix equation and a system of linear equations.</li> <li>- Give a geometric description of solutions sets of vector equations.</li> <li>- Determine the linear (in)dependence of a set of vectors and identify the (geometric) properties of linear dependence.</li> <li>- Identify if a transformation is linear and determine the standard matrix of a linear transformation.</li> <li>- Determine the matrix of geometric linear transformations.</li> <li>- Be able to perform matrix operations (sum, scalar multiple, multiplication, transpose) and describe the law-like properties of matrix multiplication and apply these properties.</li> <li>- Describe the properties of invertible matrices, determine the inverse of a non-singular matrix and apply these topics.</li> <li>- Give definitions of subspace, column space and null space of a matrix and determine a basis for a subspace.</li> <li>- Describe and apply the concept of dimension of a linear subspace, rank of a matrix and the rank theorem.</li> <li>- Determine the LU-decomposition of a matrix.</li> <li>- Determine the determinant of a matrix by applying the properties of a determinant.</li> <li>- Apply the properties of determinants (product, transpose, inverse).</li> <li>- Determine the eigenvalues and eigenvectors of a matrix.</li> <li>- Determine the algebraic and geometric multiplicity of a matrix.</li> <li>- Determine if a matrix is diagonalizable and if so, determine a diagonalization of the matrix.</li> <li>- Analyze the case of complex eigenvalues and eigenvectors.</li> <li>- Determine the matrix of a linear transformation with respect to a basis.</li> <li>- Calculate and apply properties of the inner product in the context of orthogonality and orthogonal sets.</li> <li>- Calculate the orthogonal projection on a subspace.</li> <li>- Determine an orthogonal basis of a subspace by means of the Gram-Schmidt process.</li> <li>- Explain the normal equation of the least-squares method and apply the least-squares method to linear models.</li> <li>- Explain and calculate the orthogonal diagonalization of symmetric matrices and describe the spectral theorem for symmetric matrices.</li> </ul> |   |
| <b>Education Method</b>                 | <p>Lectures blended with exercise sessions, online homework exercises and instructions.</p> <p>Disclaimer: information may change depending on the developments around the coronavirus.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |

| <b>Expected prior knowledge</b>         | Calculus, in particular differentiating and integrating functions of one and two variables is indispensable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Course Contents</b>                  | <p>Graphical and numerical summaries of data<br/> Introduction to probability<br/> Some elementary combinatorics to find probabilities<br/> Conditional probability; Bayes' rule; stochastic (in)dependence<br/> Random variables; probability mass function; density function; distribution function<br/> Standard distributions: Binomial, Poisson, Geometric, Normal, Uniform, Exponential, Pareto<br/> Expectation and variance; transformations; Jensen's inequality<br/> Multivariate random variables; joint distributions; joint and marginal density functions; (in)dependence of random variables<br/> Covariance and correlation<br/> Chebychev's inequality; Law of Large numbers; Central Limit Theorem<br/> Sampling theory and statistical models; mean, sample variance, histogram, empirical distribution function, boxplot<br/> Theory of Estimators: Bias, Efficiency, Mean squared error<br/> Linear Regression: univariate and multivariate, goodness of fit<br/> Introduction to statistical learning<br/> Confidence intervals of Mean and Proportion; t-distribution<br/> Testing theory: Type I/II Error, p-value, significance level, critical region<br/> One sample t-test<br/> Parametric bootstrap</p> <p>Expected prior knowledge:</p> <p>Calculus, in particular differentiating and integrating functions of one and two variables is indispensable.</p> |   |
| <b>Study Goals</b>                      | <p>At the end of the course, the students will be able to:</p> <ul style="list-style-type: none"> <li>- compute (conditional) probabilities</li> <li>- use discrete and continuous random variables</li> <li>- use joint random variables</li> <li>- compute expectation and (co)variance</li> <li>- apply the law of large numbers and the central limit theorem</li> <li>- analyse data by means of graphical and numerical summaries</li> <li>- formulate a statistical model</li> <li>- estimate parameters</li> <li>- perform a linear regression analysis</li> <li>- construct a confidence interval</li> <li>- formulate and carry out hypothesis tests</li> <li>- perform a bootstrap analysis</li> <li>- Use Python to perform elementary simulation and data analysis</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Education Method</b>                 | Education will take place in a blended way: the student watches a prelecture video, makes some exercises related to this, participates in the lecture (which consist of lecturing by the teacher and making exercises) and then makes some more exercises at home. This cycle is repeated for every lecture.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |

| <b>Assessment</b>                       | <p>One midterm (week 5) on Part 1: Probability Theory and one final exam (week 10) on Part 2: Statistics. Final grade is the average of both tests. A maximum of 1 bonus point can be earned for the computer assignments provided that the final grade is greater than or equal to 5.0.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Permitted Materials during Tests</b> | Formula sheet (will be provided at each test) and a simple, non-programmable, non-graphical calculator.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |
| <b>Enrolment / Application</b>          | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. | <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Required for</b>                    | Every course in which exact reasoning is required, e.g. to prove a theorem, or reasoning from the assumption that a theorem is true. Examples:<br>* Calculus<br>* Algorithms and Data Structures<br>* Linear Algebra<br>* Probability and Statistics<br>* Machine Learning<br>* Algorithm Design<br>* Automata, Languages and Computability<br>* Logic-Based Artificial Intelligence<br>* Cryptography<br>* Software Verification<br>* Complexity Theory                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Expected prior knowledge</b>        | High school mathematics                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Course Contents</b>                 | <p>It is often useful or even essential to know if a certain statement is true, e.g. Pythagoras' famous <math>a^2 + b^2 = c^2</math> theorem about right-angled triangles. Knowledge gathered from these statements or theorems can be broadly used to solve more complicated problems. This way of working, i.e., deriving more complex theorems from simpler ones, is useful in many fields, in particular also in computer science.</p> <p>An argument is a set of premises or assumptions, followed by a conclusion. To be certain of the truth of an argument, the conclusion has to be a logical consequence of the assumptions. To prove this, the conclusion is derived from the premisses. The derivation shows us that once all premises are true, the conclusion is true as well.</p> <p>The course Reasoning and Logic is about proving the logical validity of arguments. What is a valid argument? When is an argument logically valid and when is it not? How can we determine whether an argument is logically valid? How can we derive a logically valid conclusion from the premises? Or how can we prove that a conclusion is not a logical consequence of the premises?</p> <p>In this course we will first explain a number of basic proof techniques, such as proof by contradiction, proof by mathematical induction, proof by division into cases, and the use of invariants. The application of these techniques will be practiced by proving and rejecting simple mathematical theorems.</p> <p>These proof techniques can only lead to a valid argument when the formulation of the premises and the conclusion is sufficiently precise. To express statements precisely, multiple artificial languages exist, of which we will learn two: propositional calculus and predicate logic. For both languages we look at the syntax and semantics and study how to translate expressions from a natural language to the more exact languages. Furthermore we will look at how to establish the logical validity of an argument in both languages.</p> <p>Moreover, to be able to assign truth values to formulas in predicate logic and because of the importance of this subject in every exact science, in this course we will also pay attention to elementary set theory.</p> <p>Together, the course provides tools that have important applications across mathematics, computer science, philosophy, and beyond.</p> |   |
| <b>Study Goals</b>                     | <p>After this course, the student is able to:</p> <ol style="list-style-type: none"> <li>1. translate a logically precise claim to and from natural language.</li> <li>2. describe the operation of logical connectors and quantifiers.</li> <li>3. describe the notion of logical validity.</li> <li>4. explain and apply basic set and graph operations.</li> <li>5. define and perform computations with functions, relations and equivalence classes.</li> <li>6. construct and interpret recursive definitions, including recursive data structures like trees.</li> <li>7. construct an appropriate function or relation given a description (in natural language or formal notation).</li> <li>8. construct a direct or indirect proof (by contradiction, division into cases, generalisation, or [structural] induction) or logical equivalence, or counterexample for (in)valid arguments, in propositional logic, predicate logic and set theory.</li> <li>9. identify what type of proof is appropriate for a given claim.</li> <li>10. solve simple SAT instances.</li> <li>11. develop specifications for verification tools like SAT or SMT solvers.</li> <li>12. interpret the response of verification tools like SAT or SMT solvers</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Education Method</b>                | <p>This course uses a student-centred learning methodology. Students study provided material at home.</p> <p>Every week has two sessions, during which questions about the material will be answered. There will also be small interactive exercises in some of these sessions to help the students to evaluate their understanding of the material and to apply it.</p> <p>Optional homework assignments are provided. These may be done in pairs. Lab sessions are offered, in which answers to the homework questions can be discussed.</p> <p>A project is also included in the course. This must be done individually.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Books</b>                           | Delftse Foundations of Computation, Hugtenburg & Yorke-Smith, TU Delft Open 2019, textbooks.open.tudelft.nl, ISBN 978-94-6186-952-4                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Assessment</b>                      | <p>The final grade of the course is computed from several components as follows.</p> <p>Two required exams:<br/>           Open question exam Week 5 (33.3%) (M)<br/>           Final exam Week 10 (66.7%) (F)</p> <p>Additionally there are two opportunities to achieve some bonus points:<br/>           MC-exam Week 3 (at most 0.5 points) (S)<br/>           Project, deadline Week 9 (at most 0.5 points) (P)</p> <p>Final grade<br/>           The final grade for the course is computed as follows:<br/> <math>G = (M + 2F)/3</math><br/>           If <math>G &lt; 5.8</math>, the final grade is G.<br/>           Else the final grade is <math>\min(G + \text{bonus}, 10)</math>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |

|                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                         | <p>Component grades are not rounded before being put into the final grade formula. The final grade is rounded to the nearest 0.1.</p> <p>The resit (R) covers all material and will replace the final grade for the course iff <math>R &gt;</math> the final grade.</p> <p>(The above is under the assumption that the exams in weeks 5 and 10, as well as the test in week 3 all take place on-campus. If this is not the case, then the weight of M will be 0% and S will not be worth bonus points.)</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p>                                                                                      |
| <b>Permitted Materials during Tests</b> | Course materials available in Brightspace and WebLab, a (physical or digital) copy of the textbook are allowed if the exams _cannot_ take place on campus. Otherwise no materials are allowed during the exam.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Enrolment / Application</b>          | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p> |

| <b>Expected prior knowledge</b>        | Java programming, constructing proofs, trees and graphs                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Course Contents</b>                 | <p>Algorithms and data structures are fundamental notions in computer science . Understanding how they can be exploited in combination for better programming implementations in terms of time and space complexity is vital for writing efficient code.This course enables the student to:</p> <ul style="list-style-type: none"> <li>- Explain and compare the structure and properties of standard algorithms and data structures.</li> <li>- Execute and visualize standard algorithms and data structures on given inputs.</li> <li>- Use mathematical methods to analyze the time and space complexity of algorithms and data structures.</li> <li>- Implement algorithms and data structures using the Java programming language.</li> <li>- Solve programming tasks using standard algorithms and data structures.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |
| <b>Study Goals</b>                     | <p>1. Data Structures</p> <ul style="list-style-type: none"> <li>- data containers</li> <li>-- vector</li> <li>-- list</li> <li>-- tree</li> <li>-- set</li> <li>- ordered data structures</li> <li>-- stack</li> <li>-- queue</li> <li>-- priority queue</li> <li>-- heap</li> <li>-- map</li> <li>- operations on data structures</li> <li>-- iterative implementations</li> <li>-- recursive implementations</li> </ul> <p>The student can explain essential data structures, explain and analyze the core properties of these data structures, and explain, develop, and adopt iterative and recursive implementations of operations on these data structures, and analyze and compare space and time complexity of these operations.</p> <p>2. Sorting</p> <ul style="list-style-type: none"> <li>- selection sort</li> <li>- insertion sort</li> <li>- heap sort</li> <li>- merge sort</li> <li>- quick sort</li> <li>- bucket sort</li> <li>- radix sort</li> </ul> <p>The student can explain and implement various sorting algorithms, analyze and compare space and time complexity of these algorithms, and choose sorting algorithms for different problem scenarios.</p> <p>3. Searching</p> <ul style="list-style-type: none"> <li>- search structures</li> <li>-- search trees</li> <li>-- AVL trees</li> <li>-- (2,4) trees</li> <li>- backtracking</li> </ul> <p>The student can explain data structures which support efficient search and their invariants, explain, develop, and adopt implementations of operations on these data structures, analyze and compare space and time complexity of these operations, choose search structures for different problem scenarios, and explain, implement, and analyze backtracking algorithms.</p> <p>4. Graphs and Graph Algorithms</p> <ul style="list-style-type: none"> <li>- graph data structures</li> <li>-- directed graphs</li> <li>-- undirected graphs</li> <li>-- weights</li> <li>-- representations</li> <li>- graph algorithms</li> <li>-- graph traversals</li> <li>-- path finding</li> <li>-- cycle finding</li> <li>-- connectivity</li> <li>-- topological ordering</li> <li>-- shortest path</li> <li>-- minimum spanning tree</li> </ul> <p>The student can explain various kinds of graphs, explain, analyze and compare different data structures for graphs, explain, develop and adopt implementations of operations on these data structures, analyze and compare space and time complexity of these operations, choose graph data structures for different problem scenarios, explain, implement, apply and analyze generic graph traversal strategies, and explain, develop and adopt implementations of various graph algorithms.</p> |   |
| <b>Education Method</b>                | Every week has two online sessions during which questions about the material will be answered, and small exercises will be completed with the students. Students will study the relevant material before every session through videos, slides, and the course book.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |

|                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>Expected prior knowledge</b>         | High-school-level math.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Course Contents</b>                  | Rationale<br>Computers are everywhere.<br><br>Topics include: the architecture, the structure, the operation and the interconnection of computer components into computer systems, including modern architectures, data representation, assembler programming, virtual machines, the structure of translators, compiling and loading, basic operating systems concepts (I/O, interrupt handling, process).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Study Goals</b>                      | Students can:<br>1. Explain the basic concepts, historical objectives, and modern functions of digital computers.<br>2. Evaluate and recommend number representation systems and digital circuits when given a set of realistic system constraints.<br>3. Derive conversion functions for Boolean algebra.<br>4. Use arithmetic and conversion functions on well-known number representation formats.<br>5. Describe the architecture and operation of digital computers.<br>6. Perform operations using each of the main components of a digital computer: the basic processing unit, the I/O system, the memory system, the interconnection system.<br>7. Explain system mechanisms for building faster processors, such as pipelining, memory organization, caching, and parallelism.<br>8. Analyze the trade-offs inherent in the design of digital computers, concerning among others performance, cost, scalability, availability, and energy consumption.<br>9. Demonstrate proficiency with basic assembly programming by implementing realistic basic programs used in digital computers. |   |
| <b>Education Method</b>                 | Lectures, tutorial, and practical work (Lab). Self-study with peer reviewing.<br>This course uses gamification.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |

| <b>Course Language</b>                  | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Course Contents</b>                  | <p>Computer networks form the basis of all digital communication. They are typically structured in layers. Each layer has clearly defined functions and algorithms, which we will discuss in class. Specifically, the course deals with the following layers:</p> <ul style="list-style-type: none"> <li>Data link layer</li> <li>MAC sublayer</li> <li>Network layer</li> <li>Transport</li> <li>Application</li> </ul> <p>For each of these layers, the course introduces security issues and defenses. Furthermore, it provides an introduction to cryptographic notions utilized by the defenses.</p>                                                                                                                                      |   |
| <b>Study Goals</b>                      | <ol style="list-style-type: none"> <li>1) The student can describe the principles of layered architectures, in particular the functions and purposes of all layers for the OSI reference model</li> <li>2) The student can describe the core algorithms of each layer and provide arguments why these algorithms fulfill the function of the respective layer</li> <li>3) The student can apply the core algorithms to toy examples</li> <li>4) The student can design variants of core algorithms for a given scenario.</li> <li>5) The student can identify security issues of each layer and choose a suitable type of solution</li> <li>6) The student can exemplify the concepts of ethical hacking and responsible disclosure</li> </ol> |   |
| <b>Education Method</b>                 | <p>Lectures (8 weeks x 2 lectures x 2 hours)<br/>during these, new concepts are illustrated through the discussion of multiple examples from the book.</p> <p>Lab (5 weeks x 4 hours)<br/>during these the student gains experience with commonly used Internet software (e.g. Wireshark). Additionally the student applies given abstractions and network concepts.</p>                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Literature and Study Materials</b>   | <p>Computer Networks, Andrew S. Tanenbaum, 5th or 6th edition.<br/>International English edition.</p> <p>Lecture Notes for Network Security</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Assessment</b>                       | <p>Written exam on paper, closed-book.<br/>There is a single resit opportunity of the exam. Exams are a combination of multiple choice questions and open (computation-based) questions.</p> <p>The lab work is not graded.<br/>The final tests is your final grade.<br/>MapleTA or weblab is used, if the size of the student population allows it.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p>                                                                                                                                                                                                                                                                  |   |
| <b>Permitted Materials during Tests</b> | Calculator                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Enrolment / Application</b>          | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p>                          |   |

| <b>Expected prior knowledge</b>         | Knowledge of basic algebra. Proficiency in at least one programming language.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Course Contents</b>                  | <p>Web &amp; Database Technologies is a first-year course that provides an introduction to web and database technologies and programming.</p> <p>Topics related to web technology and programming include:</p> <ul style="list-style-type: none"> <li>= Introduction to the web and HTTP;</li> <li>= Introduction to web development and app design;</li> <li>= Front-end development: HTML, CSS, JavaScript;</li> <li>= Back-end development: Node.js;</li> <li>= Mechanisms for authentication, security and sessions.</li> </ul> <p>Topics related to database technologies include:</p> <ul style="list-style-type: none"> <li>= Introduction to databases;</li> <li>= Overview of database Languages and architectures;</li> <li>= The basic relational model; database design theory;</li> <li>= SQL: data definition, constraints, updates, queries, views, triggers;</li> <li>= Relational databases and object persistence;</li> <li>= Introduction to non-relational database systems: key-value stores, document stores, graph databases.</li> </ul>                                                                                                                                              |   |
| <b>Study Goals</b>                      | <p>Upon completion of this course, participants will have gained knowledge of web and database system concepts and the ability to:</p> <ol style="list-style-type: none"> <li>1. Explain the basic architecture of the Internet and the web;</li> <li>2. Analyse the requirements for a web application given a description of an application idea;</li> <li>3. Create an application front-end with HTML and CSS based on a given static design;</li> <li>4. Create an interactive web application with client-side JavaScript;</li> <li>5. Develop server-side code for authorization, cookies, sessions and database access;</li> <li>6. Compare the strengths and weaknesses of different data management techniques, describing their most suited applications through meaningful examples;</li> <li>7. Enumerate and define the main elements of the relational model;</li> <li>8. Describe and design SQL queries for the creation, altering, and manipulation of tables, indexes, and views;</li> <li>9. Develop logical database schema, with principled design that enforce data integrity;</li> <li>10. Prototype and deploy database applications using open-source database systems.</li> </ol> |   |
| <b>Education Method</b>                 | Lectures, and practical work (lab assignments).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Literature and Study Materials</b>   | <p>In addition to the official course book(s), students will be provided with:</p> <ul style="list-style-type: none"> <li>= The slides presented in class, cross-referenced to the content of the book(s);</li> <li>= Additional study materials, selected to provide insights on the topics covered during the lectures.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Practical Guide</b>                  | All necessary information about the practical setup (schedule, grading, exams, resits, etc.) of the course is available in the course syllabus (accessible via Brightspace).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Books</b>                            | <p><b>WEB</b></p> <p>There is no required book for the web technologies part of the course.</p> <p><b>DATABASES</b></p> <p>The book is not required but helpful:<br/> Fundamentals of Database Systems, 7th Edition, Augustus 2016 (Global Edition). Authors: Ramez Elmasri, Shamkant Navathe.<br/> ISBN10: 1292097612. ISBN13: 9781292097619</p> <p>URL: <a href="http://catalogue.pearsoned.co.uk/educator/product/Fundamentals-of-Database-Systems-Global-Edition/9781292097619.page">http://catalogue.pearsoned.co.uk/educator/product/Fundamentals-of-Database-Systems-Global-Edition/9781292097619.page</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Assessment</b>                       | <p>Two exams: Midterm in W2.5 and Final in W2.10. Both exams are in written form, with multiple choice, short answer questions, and open questions.</p> <p>Midterm exam 40%<br/> Final exam 40%<br/> Lab assignments 20%</p> <p>One exam will cover all database topics, one exam will cover all web topics.</p> <p>Both exams are in written form, with multiple choice and short answer questions. During the resit sessions, students are allowed:</p> <ul style="list-style-type: none"> <li>= to resit the midterm and the final exam independently; or</li> <li>= to resit both the midterm and the final exam at the same time.</li> </ul> <p>Students must obtain a grade greater or equal to 5 in both exams (midterm and final) in order to pass the course. Lab assignments are not mandatory, but contribute to the final grade according to the percentages reported above. Lab assignments have no resit opportunities.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p>                                                                                                                                               |   |
| <b>Permitted Materials during Tests</b> | No books or other materials are allowed during exams.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Enrolment / Application</b>          | Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |

**Co-Instructor**

Registration for this course takes place via Osiris, separately from the exam registration. For more information, see:

| <b>Course Language</b>                  | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Expected prior knowledge</b>         | Basic understanding relational query languages (SQL) and databases (as obtained in the Web and Database Technology Y1 Q2 course).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Course Contents</b>                  | <p>This class also relies heavily on Algorithms and Data Structures.</p> <p>In this course you will learn how to model, manage, and query information in a Database Management System (DBMS). We will focus on different data modelling techniques, but also on aspects of query processing like for example query parsing or optimization. Also transaction management is a central topic of interest. The core focus is on classic relational OLTP databases, but we will also briefly touch alternative systems like the current NewSQL-trend and systems optimized for in-memory or OLAP applications. Additionally, NoSQL systems and their respective data models will be discussed.</p> <ul style="list-style-type: none"> <li>- Database normalization: modelling in an unambiguous and non-redundant manner in relational tables such that inconsistencies and anomalies are avoided.</li> <li>- File-organization and indexing: the data structures and their associated algorithms to store data in memory and on disk, such that it can be retrieved and processed efficiently when needed.</li> <li>- Query processing and optimization: the techniques that are used by a DBMS to execute certain SQL queries as efficiently as possible, taking into account how the data is stored and which indexes are present. This also covers Relational Algebra.</li> <li>- Transaction management and concurrency control: the techniques that a DBMS offers to allow different users and application to operate in parallel on the same data without interfering with each other or causing inconsistencies in the data.</li> <li>- NewSQL and alternative system: the systems beyond traditional relational database design space optimized for specialized requirements like extreme OLTP performance, OLAP queries, or in-memory storage.</li> <li>- NoSQL and non-relational data: in the recent years, systems not relying on the relational model became popular. We will also discuss how this affects data modelling, especially with respect to document models, key-value models, wide-columnar models, but also graph models.</li> </ul>                                                                                                                                                                       |   |
| <b>Study Goals</b>                      | <p>The course aims at teaching the basic competencies required to design and understand applications interacting with relational database management systems (RDBMS). Students will gain an insight into how RDBMS are implemented, learn about the available design choices, and the trade-offs imposed by different designs. This allows students to competently identify and solve problems in application design, and to improve and tune data models and queries. We will also deal with non-relational systems and discuss how they affect the data processing workflow.</p> <ul style="list-style-type: none"> <li>- Perform Data Modeling and be able to: <ul style="list-style-type: none"> <li>-- Design and implement normalized relational schemas in a database system, by designing Entity Relationship diagrams and translating them to relational tables.</li> <li>-- Describe alternative data models such as the document model, key-value model, or graph models and analyze the trade-offs as in comparison to the relational model.</li> <li>-- Analyze the requirements of a given application scenario and be able to derive a suitable data model.</li> </ul> </li> <li>- Get a grip of the internals of relational database systems by being able to: <ul style="list-style-type: none"> <li>-- Describe and analyze the two main ways of storing and representing data in relational databases as well as analyze their performance trade-offs with respect to input/output (IO) costs.</li> <li>-- Describe different index structures and analyze their impact on query response time for range-, point- and join queries.</li> <li>-- Analyze the trade-offs between different physical operators for database operations such as joins, aggregates and filters.</li> <li>-- Describe and apply the query optimization process and design physical execution plan and compute the costs for their relational operations.</li> <li>-- Explain the need for transaction protocols and illustrate database update anomalies that can arise in the absence of such protocols. Be able to apply such protocols for given scenarios.</li> <li>-- Evaluate and apply different recovery algorithms such as UNDO/REDO logging, under different types of failures and their frequency.</li> </ul> </li> </ul> |   |
| <b>Education Method</b>                 | Lectures and Homework Lab                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Computer Use</b>                     | Students will require access to a personal computer. The labs will deal with larger data sets, so some HDD space (several GB) will be needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Literature and Study Materials</b>   | The course and evaluation is based on the provided lecture slides. For alternative explanation or more in-depth studies, the recommended book can be used.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Books</b>                            | <p>Fundamentals of Database Systems by Ramez Elmasri and Shamkant Navathe, Pearson. Preferred 7th edition, but also the older ones are usable.</p> <p>Database Systems: The Complete Book by Hector Garcia-Molina, Jeffrey D. Ullman, and Jennifer Widom (2nd edition preferred, older ones also OK).</p> <p>These books are NOT required, but might be helpful for more in-depth studies. Additional (optional) books/resources are mentioned in the lecture.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Assessment</b>                       | <p>The course has a written final exam which determines the final grade. In addition, there will be practical (lab) assignments which are graded with sufficient or insufficient. The overall lab grade (which is computed from the individual assignments) needs to be passed with "sufficient" to pass the course.</p> <p>Resit: A resit of the exam is offered in the next examination period. A resit of the lab can only offered in the next instance of the course in the following year.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Permitted Materials during Tests</b> | 1 handwritten sheet of A4 paper (any content chosen by the student, writing front and back permitted).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Enrolment / Application</b>          | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |

## Bachelor 2nd year TI 2022

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Prerequisites</b>  | <p>Please note! The entry requirements are mentioned in the regulations <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/regulations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/regulations/</a>. If there are differences between what is mentioned here and what is mentioned in the regulations, that what is mentioned in the regulations is binding.</p> <p>In the second year the following course has entry requirements:</p> <p>You may only participate in CSE2000 Software Project if you have passed the courses CSE1100 OOP, CSE1305 Algorithms and Datastructures, CSE1105 OOP Project, CSE1110 Software Quality and Testing and CSE2115 Software Engineering Methods.</p> <p>If you didnt pass the required courses/projects and think that not participating in the project will result in unduly study delay you may hand in an application for an entry requirements exemption. You will receive more information during assemblies, via Brightspace and by e-mail.</p> |
| <b>Introduction 1</b> | <p>Registration for exams and pre-registration for projects</p> <p>For the CSE2000 Software Project you pre-register during Q2. You will be informed about this by e-mail and during the General Assemblies.</p> <p>For the exams of all the courses you have to register at least two weeks before the day that they take place. More information is available on: <a href="https://www.tudelft.nl/en/student/education/examinations/registration-for-examinations/">https://www.tudelft.nl/en/student/education/examinations/registration-for-examinations/</a>.</p> <p>If you decide after your register that you dont want to participate in the project or exam dont forget to cancel your registration.</p>                                                                                                                                                                                                                                                                                                                                             |
| <b>Introduction 2</b> | <p>Variants</p> <p>The first three quarters of the second year you follow a Variant. There are three Variants:</p> <p>Multimedia, with the courses Signal processing, Image processing and Multimedia Analysis;</p> <p>Systems, with the courses Digital Systems, Embedded software and Operating Systems;</p> <p>Data, with the courses Big Data Processing, Data mining and Computational Intelligence.</p> <p>To finish your Bachelor CSE you must have completed one of the Variants as a whole.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Introduction 3</b> | <p>Preview year 3:</p> <p>In the first semester of the third year you do your minor, which you choose this year.<br/>For more information, go to: <a href="http://studenten.tudelft.nl/en/students/education/minors/">http://studenten.tudelft.nl/en/students/education/minors/</a>.</p> <p>Would you like to go abroad in your third year? Start your orientation now on <a href="https://www.tudelft.nl/en/eemcs/study/exchange">https://www.tudelft.nl/en/eemcs/study/exchange</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>Course Contents</b>                 | <p>The TU Delft Software Project is a second-year project carried out by Computer Science bachelor students. The software project is carried out in a group of about 5 students, who work together as a software development team. During the project, the team produces a product that is commissioned by a client and solves a real-world problem. Over the course of the project, the student team experiences the entire trajectory of a real-world software development project, including:</p> <ul style="list-style-type: none"> <li>problem analysis, feasibility study, research, and risk analysis,</li> <li>requirements engineering,</li> <li>specifications and quality requirements,</li> <li>implementation,</li> <li>testing and validation,</li> <li>delivery of a working product, including necessary documentation.</li> </ul> <p>The team tackles this challenge by integrating their knowledge and experience from previous courses and projects in the curriculum.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |    |
| <b>Study Goals</b>                     | <p>At the end of the software project, students will have/demonstrate tangible proof that:</p> <p>LO1: They can carry out an entire software development cycle with success, from problem definition, researching solutions through testing the product.</p> <p>LO2: They can work in a team of developers addressing a real-world problem, in collaboration with a coach and a client.</p> <p>LO3: They can acquire the relevant information and knowledge from literature and different stakeholders.</p> <p>LO4: They can effectively choose a development strategy and execute a development process according to that strategy.</p> <p>LO5: They can establish the necessary quality requirements for a product and carry out the tests necessary to determine that the product fulfils those requirements.</p> <p>LO6: They can present and report a complete and convincing explanation of the development process and the product results.</p> <p>LO7: They can take societal, economical, ethical and legal aspects into account in the development of their solutions.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |    |
| <b>Education Method</b>                | Project education with weekly feedback moments; problem-based learning. Lectures for technical writing and responsible computer science.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |    |
| <b>Prerequisites</b>                   | <p>Students are only allowed to get access to CSE2000 Software Project if the following courses are successfully completed:</p> <ul style="list-style-type: none"> <li>CSE1100 Object Oriented Programming</li> <li>CSE1105 OOP Project</li> <li>CSE1110 Software Quality and Testing</li> <li>CSE1305 Algorithms &amp; Datastructures</li> <li>CSE2115 Software Engineering Methods.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |    |
| <b>Assessment</b>                      | <p>Assessment happens at the end of the project based on the final report, the code and test quality, and the final presentation. The committee will determine the grade based on:</p> <ol style="list-style-type: none"> <li>1. the research phase: problem analysis, research/design methodology, and requirements engineering.</li> <li>2. the way the project was executed; this includes planning, how the group communicated with all involved people, and the dedication of the students.</li> <li>3. the quality of the final product, quality assurance thereof, and the accompanying documentation as well as the difficulty of the assignment in correlation with the achieved results.</li> <li>4. the final report, including ethical evaluation of the product and/or its domain.</li> <li>5. the final presentation and Q&amp;A.</li> </ol> <p>The final grade for each of the project dimensions mentioned above should be at least a 5.0, and the final combined grade should be at least a 5.75 in order to pass this course.</p> <p>In exceptional cases the committee may decide that there is need for an individual adjustment of the group grade. For instance, if an individual within the group did not contribute sufficiently, the grade of that individual may be lowered.</p>                                                                                                                                                                                                                                                                                                                                                              |    |
| <b>Enrolment / Application</b>         | <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p> <p>ATTENTION: Participation in this course requires a mandatory registration via ProjectForum. This academic year the course will be organized twice: in Q2 and Q4.</p> <p>From the academic year 2023-2024 and onward, the Software Project will only be offered once per year in Q4</p> <p>For the Q2 version of the course registration will be open in weeks 4.6 &amp; 4.7 of the preceding academic year (LAST EDITION IN 2022-2023).</p> <p>For the Q4 version of the course registration will be open in weeks 2.8 &amp; 2.9 of the academic year.</p> <p>After these deadlines you can no longer enrol for the course.</p> <p>For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p> <p>The Software Project is a fulltime course (15 EC - 42 hours per week). Therefore we expect you to fully focus on your participation in the project when you enrol. You are expected to not take any other courses during the same quarter in addition to the software project.</p> <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> |    |
| <b>Special Information</b>             | This course makes use of a course email: <a href="mailto:sp-cs-ewi@tudelft.nl">sp-cs-ewi@tudelft.nl</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |    |

| <b>Course Contents</b>                 | <p>The course covers the most important software engineering practices needed to build high-quality software systems. The overall goal is to give the students the instruments to become Software Professionals. The course covers both high-level software project management, and low-level software design techniques needed to create evolvable and maintainable systems.</p> <p>Specific topics covered include design patterns, requirements engineering, UML modeling, software architecture, user interface design, and software analytics.</p> <p>In the lab work, students will apply a selection of techniques to a group project they will develop and to weekly assignments on theoretical aspects.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |          |
| <b>Study Goals</b>                     | <p>(1) Students can select appropriate software engineering methods, which are designed and used to build maintainable and evolvable software systems.</p> <p>(2) Students can judge the benefits/drawbacks of the presented software engineering methods that are commonly used in current software development.</p> <p>(3) Students can use presented software visualization techniques and software analytics to obtain an overview of an existing software system and to detect anomalies in the structure of the code.</p> <p>(4) Students can judge the real benefits/drawbacks of using certain design patterns and software validation techniques in a given software project.</p> <p>(5) Students can follow agile methodologies to develop a new software project.</p> <p>(6) Students can derive the valid requirements for a new software project, given natural language descriptions and interaction with stakeholders.</p> <p>(7) Students can create a new software project, by applying the most appropriate software engineering practices, given the context of development.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |          |
| <b>Education Method</b>                | Labwork + Lectures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |          |
| <b>Literature and Study Materials</b>  | Materials will be provided via Brightspace                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |          |
| <b>Assessment</b>                      | <p>-----</p> <p>Final grade composition</p> <p>-----</p> <p>The final grade of this course is calculated using the following weights;</p> <ul style="list-style-type: none"> <li>* Written exam: 50%</li> <li>* Lab work: 50%</li> <li>* Oral Presentations: Pass/Fail</li> <li>* Attendance to weekly meetings (lab + Oral Presentations): Pass/Fail</li> </ul> <p>-----</p> <p>General remarks</p> <p>-----</p> <ul style="list-style-type: none"> <li>* Each grade must be sufficient to pass the course.</li> <li>* Passing the course is conditioned by passing the Oral Presentation module.</li> <li>* It's mandatory to contribute to all assignments; there must be visible activity in the code repository (the contributions should be of reasonable size, to be judged by the lecturers). Not contributing to one of the parts of this course can result in a failing grade for the course. Students are responsible for checking that they've contributed to all assignments.</li> <li>* The labwork is graded with the same grade for the whole group; in case of unequal work distribution, etc. lecturers may decide to modify grades of individuals students such that the grade represents the work delivered by that student.</li> <li>* Partial grades are not carried over to the next edition of this course.</li> <li>* In case you have completed Oral Presentations before then you may be eligible for an exemption for the attendance to the weekly lectures. Check Brightspace for more information.</li> </ul> <p>-----</p> <p>Resits</p> <p>-----</p> <ul style="list-style-type: none"> <li>* The re-sit will replace the grade for the exam only.</li> <li>* Lab work cannot be recovered through the re-sit but must be completed sufficiently during the course.</li> <li>* For the Oral Presentations part we offer a single resit possibility.</li> </ul> <p>-----</p> <p>MANDATORY MEETINGS</p> <p>-----</p> <p>This course contains meetings with a TA, those are (among others) used to assess the process of the lab work. Attendance to those meetings is therefore required. When you can not attend a meeting you must notify the course staff (or academic counselors) prior to the meeting with the reason (validity of reason is to be judged by the course staff/academic counselors). Absence without prior communication can lead to a penalty on the final grade. Repeated absences can lead to an insufficient overall result for this course.</p> <p>-----</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p> |          |
| <b>Enrolment / Application</b>         | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |          |

| <b>Expected prior knowledge</b>        | (These are not formal requirements, but we expect you to understand and be able to apply the concepts taught in these courses.)<br><br>- CSE1100 Object Oriented Programming: Knowledge about object-oriented programming in languages like Java.<br>- CSE1110 Software Quality and Testing: Knowledge about how to test your code and to write understandable and maintainable code.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Course Contents</b>                 | The design of a programming language is the result of a selection from a general collection of programming language concepts. With some frequency, new languages are introduced that combine concepts in a novel manner and sometimes introduce new concepts. During their careers, computer scientists will have to work with more than one generation of programming language. In order to learn new programming languages, a computer scientist should understand the basic principles in the design of programming languages. In this course we study these principles. The topics covered in the course include:<br><br>* Syntax and interpretation: programs as data, abstract vs. concrete syntax, interpretation<br><br>* Functional programming: higher-order functions, lexical scope, function closures, currying and partial application, functions over data (especially map, fold, and filter).<br><br>* Mutation and memory: implementing loops and recursion, tail calls, heap memory allocation and reuse.<br><br>* Lazy evaluation and infinite streams: lazy vs. eager evaluation, thunks, streams, memoization.<br><br>* Types: a type as a set of values together with a set of operations, primitive types, compound types, type safety and errors caused by inconsistent use of values, association of types to names, type checking, type inference.<br><br>* Objects and encapsulation: privacy and visibility of class members, interfaces revealing only method signatures, inheritance, subtyping.<br><br>NOTE: We are in the process of updating the course, so some additional topics may be added to the course. |   |
| <b>Study Goals</b>                     | By the end of this course, you will be able to:<br><br>1. Use algebraic data types and pattern matching to implement a definitional interpreter for a programming language concept.<br><br>2. Use a modern high-level programming language such as Scala to implement, test, and debug definitional interpreters and type checkers for languages with simple types.<br><br>3. Define example and counter-example programs that use a programming language concept correctly and incorrectly; for example, variables and lexical scope in a program using function closures.<br><br>4. For multiple programming languages, identify program properties checked statically and program properties checked dynamically.<br><br>5. Discuss how programming concepts interact with the definition and implementation of other language features.<br><br>6. Describe trade-offs of the functional approach (defining a function for each operation with the function body providing a case for each data variant) and the object-oriented approach (defining a class for each data variant with the class definition providing a method for each operation).<br><br>NOTE: We are in the process of updating the course, so some additional study goals may be added to the course.                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Education Method</b>                | The course consists of:<br><br>- lectures with assignments for students<br>- self study of the course books<br>- making of assignments in WebLab<br><br>During lab hours, teaching assistants will be available for helping students.<br><br>Students are expected to bring to the lecture pen and paper for making notes and solving assignments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Books</b>                           | We use multiple online, free-to-use books:<br><br>- Programming Languages: Application and Interpretation (2nd edition), S. Krishnamurthi, free online book available at <a href="http://cs.brown.edu/courses/cs173/2012/book/">http://cs.brown.edu/courses/cs173/2012/book/</a><br>- Object-Oriented Programming Languages: Application and Interpretation, E. Tanter, free online book available at <a href="https://users.dcc.uchile.cl/~etanter/ooplai/">https://users.dcc.uchile.cl/~etanter/ooplai/</a><br><br>Additional reading material will be provided through Brightspace or WebLab by the lecturers of the course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Assessment</b>                      | The course has a computer exam as well as a lab with mandatory assignments.<br><br>The grade for the course is determined by the weighted average of<br>- Exam: 80%<br>- Lab: 20%<br><br>To pass the course, each of these grades (Exam, Lab) should be 5.0 or higher, and the overall grade must be 5.8 or higher.<br><br>The Lab grade consists of two parts:<br>- Mandatory Assignments: 80%. The grade for each mandatory assignment must be 5.0 or higher. Failing any mandatory assignment means failure for the lab component (and transitively, the course).<br>- Challenge Assignments: 20%. Not required to pass the course, but do contribute to your grade.<br><br>The grade for the lab is composed of the average grade for the mandatory assignments (80%) and the average of the highest grades for a subset of the challenge assignments (20%).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |

---

Important information about assessment:

- There is NO resit opportunity for the lab component of the course.
- There is a resit opportunity for the exam.
- Lab results cannot be transferred between years.
- Exam results cannot be transferred between years.

**\*Important\*:** There is no resit opportunity for the lab as a whole. The lab (assignments) must be completed within the quarter where the course is given, and cannot be completed outside of this period.

---

Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)

**Enrolment / Application**

The course uses WebLab (<https://weblab.tudelft.nl>) for assignments and the computer exam.

Students must enrol for the course in WebLab no later than the second week of the course (but preferably before the start of the course). Students should sign in to WebLab using the Single Sign on for TU Delft option to obtain credit for the course.

Students should register for the exam in Osiris and in WebLab. No books or notes may be used during the exam.

Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).

Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/>

**Special Information**

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Expected prior knowledge</b>        | To avoid excluding students from participation that caught up with the necessary knowledge over the summer, the following courses are not a prerequisite. Nevertheless, knowledge in these areas is required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Course Contents</b>                 | <p>CSE1100/TI1206 Object-oriented programming<br/> CSE1305/TI1316 Algorithms and Data Structures<br/> CSE1200/TI1106M Calculus<br/> CSE1205/TI1206M Linear Algebra</p> <p>This course introduces computer graphics and its participants will learn about the scientific challenges and problems of image synthesis and gain working knowledge in this area. The focus will lie on rendering (the process of producing images on a screen). The course will present the foundations of image synthesis, as well as the modelling of shape and appearance of objects. The introduced elements are often general and apply to a wide variety of topics even outside of the area of Computer Graphics. Examples include geometric representations, hierarchical structures, or projective geometry, which will also reoccur later in the curriculum in various courses. A good basis in linear algebra is important for this course.</p> <p>Computer Graphics applies fundamental aspects of Computer Science (parallel programming, data structures, algorithms...). The course will give an overview of the field, but will create links to contemporary results and research, which will offer the possibility to further deepen certain knowledge and to gain an outlook on recent trends in research.</p> <p>A preliminary outline is as follows:</p> <ol style="list-style-type: none"> <li>1) Introduction, Objects and Images</li> <li>2) An introduction to C++</li> <li>3) Transformations and Homogeneous Coordinates</li> <li>4) Projective geometry</li> <li>5) An introduction to 3D APIs</li> <li>6) Materials and shading</li> <li>7) Shadows</li> <li>8) Whitted-Style Ray Tracing</li> <li>9) Acceleration Structures</li> <li>10) Q&amp;A, Recap Session</li> </ol>                                                                                                                                                                                                                                                                |   |
| <b>Study Goals</b>                     | <p>This course enables the student to:</p> <ul style="list-style-type: none"> <li>-S1- Explain and compare the structure and properties of standard algorithms and data structures linked to Computer Graphics.</li> <li>-S2- Execute and visualize standard algorithms and data structures.</li> <li>-S3- Use mathematical methods to analyze, create, apply algorithms and data structures, as well as understanding time and space complexity of image-generation algorithms</li> <li>-S4- Apply mathematical modeling and theory of geometric computations and transformations, object representations, simulation, and encoding.</li> <li>-S5- Implement algorithms and data structures using the C++ programming language and OpenGL.</li> <li>-S6- Apply the knowledge obtained in this course to problems of other fields</li> </ul> <p>During this course, the participants will receive an overview of computer graphics and gain familiarity with the field. They should be able to know the basic terms related to this domain, understand the representation of images, objects, and the image formation process, including the theory, optimizations, and underlying physical processes. Hereby, the notion of physical models will be explored with examples like material representations. Further, they will learn about the difficulties and challenges related to advanced image synthesis.</p> <p>Via practical assignments and lab work, the participants will become familiar with 3D APIs and be able to reproduce parts of the course in practice. They will learn that graphics can be useful in various contexts to visualize intermediate results and data. They further learn to create their own applications. It will become evident that graphics can even serve as a means to solve problems studied in other disciplines.</p> <p>Given the close link to linear algebra, students will extend their knowledge and learn to calculate with and make use of advanced concepts, namely homogeneous coordinates.</p> |   |
| <b>Education Method</b>                | <p>The course will consist of about 10 lectures (2 hours each) and 10x4h guided practical sessions. The latter will also serve as a basis for the course project.</p> <p>Initial sessions will be dedicated to background knowledge and recaps and will cover the basics of the programming language used in the course (C++).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Literature and Study Materials</b>  | <p>The following book is highly recommended for this course:</p> <p>Fundamentals of Computer Graphics, 4th Edition, Steve Marschner and Peter Shirley, CRC Press<br/> (e-book available from the TU Delft Library)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |

---

The following books can be used as extra resources:

Computer Graphics. Principles and Practice by James D. Foley, Andries VanDam, Steven K. Feiner - Addison Wesley  
- Very complete, goes far beyond the course but covers all topics

Mathematics for 3D Game Programming & Computer Graphics by Eric Lengyel - Charles River Media (contains also exercises)  
- More focus on linear algebra, contains not all topics of the course but offers exercises

Real-time Rendering by Tomas Akenine-Möller, Eric Haines, Naty Hoffman - Peters, Wellesley  
- Complete but higher level, with many more content related to real-time approaches

Real-Time Shadows by Elmar Eisemann, Michael Schwarz, Ulf Assarsson, Michael Wimmer - Taylor & Francis  
- only suggested for learning more about the particular topic of shadows

## Assessment

The final grade consists of two partial grades: Exam grade [E] and a Practical Grade [P]

The final grade is computed via  $\text{ROUND}(0.5 \cdot E + 0.5 \cdot P)$ , where ROUND is the mathematical rounding in .5 steps.

Following the TU Delft regulations, to pass the course each partial grade E and P should be  $\geq 5.0$ , and the final grade should be  $\geq 6.0$ .

---

[E] Exam grade:

The exam grade will have one of the two formats below, depending on the developments around the coronavirus:

Option 1: Online exam: multiple-choice and open-ended questions. Course material allowed (only book and slides). A simple calculator without programming capabilities is permitted. Consulting other sources (e.g., internet) not allowed.

Option 2: Physical exam: multiple-choice and potentially open-ended questions. A simple calculator without programming capabilities is permitted. No course or other materials allowed.

[P] Practical grade:

The Practical grade consists of two parts: Assignment grade [A] and Final Project grade [F]

The Practical grade is given as:  $P = 0.4 \cdot A + 0.6 \cdot F$  and mathematically rounded in .1 steps.

---

The two parts of the Practical grade [P] are defined as follows:

[A] Assignments:

There are 6 individual assignments, of which 5 will be evaluated with the weights: 15%, 25%, 25%, 25%, 10%

Each assignment should be completed until ~1 week after the handout (deadlines will be available via Brightspace).

Please note that committing fraud in one of the assignments leads to the invalidation of the whole Assignment grade [A]

[F] Final Project:

The final project is done in groups but students can receive individual grades based on their performance.

The group distribution is determined by the grades of the first three individual assignments.

---

Resits:

There will be a resit for the Exam - participation is possible without any conditions and the maximum grade of the first exam and the resit will constitute the exam grade E.

There are NO resits for the Assignments.

There is a resit for the Final Project linked to certain conditions;

It will take the form of a new individual project and is only available to those that have an average  $\geq 6$  points for their Assignment grade [A] and a  $\geq 6$  for their first exam grade (not the resit). It only allows the participants to increase their Final Project grade [F] to maximally a 6.

---

## Enrolment / Application

Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)

Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).

Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/>

| <b>Expected prior knowledge</b>        | Calculus: series, integration, complex numbers, complex exponents, Euler's formula. Linear algebra: vector and matrix manipulations. Special attention is asked for complex numbers. Self-check exercises and study material is provided via Brightspace                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Course Contents</b>                 | Digital signal processing is used in many modern computer sciences systems and applications. Examples are machine learning, artificial intelligence, and big data analysis; content recommenders in information systems; speech, music and image content based retrieval and searching; music and video compression; sensor data processing in embedded systems; bioinformatics and medical data analysis. This course deals with the foundations and principles of digital signal processing. The first part concentrates on acquiring digital signals (sampling) and the basic linear filtering operations and convolution. The second part of the course introduces the concept of frequency or Fourier description of signals and systems. This concept is the foundation of many of today's computer science-based systems and applications, and has found wide applications in the processing of a variety of sound, music, sensor, image, video and other multimedia information                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Study Goals</b>                     | <p>1. Properties of digital signals and systems. The student is able to explain, compute and apply the properties of time-discrete linear time-invariant systems and the input-output relation; explain and use the principle of superposition; write arbitrary signals in terms of the sum of impulse signals.</p> <p>2. Linear time-invariant (LTI) filters and convolution. The student is able to explain, determine and apply the impulse response of a time-discrete LTI system such as FIR or IIR filter; explain the relation between impulse response, input-output relation and convolution; manually (for short signals) or numerically (using Python, for long signals) convolve the input signal and the impulse response to compute the output signal; explain and apply the properties of convolution, including the difference between linear and circular convolution; recursively compute the output of an IIR filter; implement and visualize convolution via Jupyter Notebook; implement and apply FIR filters in practical exercises and assignment, and visualize and interpret the results.</p> <p>3. Sampling. The student is able to explain and apply the process of data acquisition (sampling) and Shannon's sampling theorem; explain the concepts of oversampling, undersampling and aliasing; explain how to avoid aliasing; use of zero-order or linear interpolation for the reconstruction of time-continuous signals; make audible (using Jupyter Notebook) original and processed audio signals and interpret the results.</p> <p>4. Discrete Fourier Transform (DFT). The student is able to write a periodic signal as the sum of complex exponentials; explain the concepts and differences of Fourier series, DTFT and DFT; explain and interpret the complex spectrum, magnitude spectrum and phase spectrum; compute and visualize manually (for short signals) or numerically (for longer signals) the magnitude and phase of DTFT and DFT coefficients, and interpret the results; explain the difference between the numerical results computed using the DFT for finite-length signals and the theoretical results computed using the DTFT for infinite-length signals; explain the principles of the fast Fourier transform (FFT); apply the DTFT and DFT to practical exercises and assignments.</p> <p>5. Frequency response of LTI filters. The student is able to compute manually (for short impulse responses) or numerically (for longer impulse responses) the frequency response of an LTI system using DTFT and DFT; visualize and explain the magnitude and phase response of an LTI system; evaluate convolution via product of frequency response of the filter and Fourier transform of the input signal; compute the frequency response of cascaded filters; numerically determine the impulse response of an FIR filter with desired frequency response using the inverse-DFT method.</p> <p>6. Applications of filters and DFT. The student is able to apply theory and practice to (simplified) versions of relevant computer science-based signal processing problems and assignments, such as music compression and recognition.</p> |   |
| <b>Education Method</b>                | <p>The course consists of</p> <ul style="list-style-type: none"> <li>- 7 plenary lectures in which the main concepts are explained and discussed;</li> <li>- 7 working group in which theory and practical (based on Jupyter Notebook) exercises are solved and discussed;</li> <li>- 6 hands-on sessions in which practical (based on Jupyter Notebook) assignments need to be solved and approved by the instructor.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Computer Use</b>                    | The course includes a compulsory set of computer (based on Jupyter Notebook) assignments that need to be solved and approved by the instructor during the hands-on sessions. Jupyter Notebook software is pre-installed on the computers available during the hands-on sessions. Students can also install Jupyter Notebook software on their own computer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |
| <b>Literature and Study Materials</b>  | The course loosely follows the book 'Signal Processing First' James H. McClellan, Ronald W. Schafer and Mark A. Yoder ISBN 0-13-120265-0 Prentice Hall. Alternatively, also on-line material may be used, such as 'The Scientist and Engineering's Guide to Digital Signal Processing', S.W. Smith ( <a href="http://www.dspguide.com/pdfbook.htm">http://www.dspguide.com/pdfbook.htm</a> ). Slides used during the lectures are made available via Brightspace. Theory and practical exercises, as well as the Python assignments (via Jupyter Notebook) are available for download via Brightspace. During the course several pointers to on-line MOOCs and video lectures will be given                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |
| <b>Practical Guide</b>                 | Study material and the hands-on assignments can be downloaded via Brightspace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Assessment</b>                      | <p>The first partial examination is in week 5, and deals with the materials covered in plenary lectures, working groups and Python assignments in week 1-4. The result of this partial exam counts for 30%.</p> <p>The second partial examination is scheduled at the end of the quarter, and covers all course material with emphasis on the materials covered in plenary lectures, working groups and Python assignments in the second half of the course. The result of this partial exam counts for 70%.</p> <p>A resit exam, covering all materials of the plenary lectures, working groups and Python assignments, is scheduled at the end of the second quarter.</p> <p>The Python hands-on assignments are integral part of the course and must be submitted for approval within the weekly-indicated deadlines. Students can solve their assignments at home (using an own computer) or during the lab sessions. Completion of the hands-on assignments are a prerequisite for entering the second partial exam or the resit exam. Students can re-submit at most one failed Python hands-on assignment during the course to still be eligible for the second partial exam. This must be done within the sessions of the spare labs in weeks six and ten. Completion of the hands-on assignments are a prerequisite for entering the second partial exam or the resit exam.</p> <p>The final grade at the end of the quarter in which the course is lectured is determined as follows.</p> <p>1. The grade (rounded to one decimal) of the first partial examination counts for 30%.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |

|                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                                         | <p>2. The grade (rounded to one decimal) of the second partial examination counts for 70%.</p> <p>3. The Python hands-on assignments have to be completed and approved by the instructor. The approval of each assignment must be done within the week set for that assignment. In case of unforeseen circumstances (like illness) the instructor can allow for a delay of maximally one week, and only if such approval is obtained at the latest in the week the assignment should have been completed.</p> <p>Validity of partial examination results and completed Python (Jupyter Notebook) hands-on assignments.</p> <p>* The results of the partial examinations expire at the end of the quarter in which the course was lectured if the Python hands-on assignments have not been completed and approved by the instructor before the second partial examination.</p> <p>* The completed Python hands-on assignments are valid for an entire academic (study) year, but expire at the end of the academic (study) year.</p> <p>The grade of the resit examination is determined as follows.</p> <p>1. The grade of the resit examination.</p> <p>2. The Python hands-on assignments completed before the resit examination. Students who had not yet completed the hands-on assignments during the regular sessions are invited to contact the instructor to make a single appointment to verify and approve all (remaining) assignments. These appointments take place in the weeks before the resit examination</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p> |
| <b>Permitted Materials during Tests</b> | The lecturers have prepared one page with key equations (formuleblad). This page is permitted during the examination. It is also allowed to make notes on this one printed page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Enrolment / Application</b>          | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Maximum number of participants</b>   | 120                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Self test</b>                        | Fourier transforms, DTFT and DFT rely heavily on the description of signals as a sum of complex exponentials. It is important that the student brings operational knowledge of complex numbers (see first years Calculus). A set of self-tests is available as well as self-study materials. Complex exponents are assumed background knowledge and not discussed during the lectures.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>Course Contents</b>                 | <p>In this course we will extend the theory of 1D signal processing to 2D digital signals: images. We will discuss image properties such as pixels, resolution, histograms, 2D spatial-invariant systems (2D-convolution filters), image enhancement, color spaces &amp; filtering, morphology, 2D Fourier transformations, Hough transform and patch descriptors.</p> <p>This course will also provide students with the experience of implementing a real-life image processing system and dealing with the challenges entailed by researching different approaches and finding a creative solution for these issues.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Study Goals</b>                     | <p>At the end of the course you will be able to:</p> <ul style="list-style-type: none"> <li>- Explain the image processing algorithmic steps and the practical application of standard image processing techniques such as: image filtering, morphological operations, edge detection, Hough Transform, patch description, etc.</li> <li>- Correctly implement the main steps of the algorithms discussed in each lectures using Python.</li> <li>- Design in Python a working and complete applied image processing system by integrating and adapting the the image processing techniques discussed in the lectures.</li> <li>- Assess each component in the designed image processing system by considering their accuracy and speed and failure cases.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Education Method</b>                | <p>The course uses:</p> <ul style="list-style-type: none"> <li>- Interactive lectures: explaining the information and deriving some of the properties of the algorithms discussed together with the students. We do exercises during the lectures and ask questions.</li> <li>- Hands-on sessions for lab assignments: the students are given practical (based on Jupyter Notebook) individual lab assignments focused on algorithms or parts of the algorithms discussed in the lecture that need to be solved and approved by the instructor.</li> <li>- Project sessions for a python-based project: The students are required to solve a quarter-long project for a real life image processing problem. The students' progress for the project's design &amp; implementation is monitored and guided to make sure students are on track. This project is solved in groups.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Computer Use</b>                    | <p>The course includes a compulsory set of computer (based on Jupyter Notebook) assignments that need to be solved and approved by the instructor during the hands-on sessions. Jupyter Notebook software is pre-installed on the computers available during the hands-on sessions. Students can also install Jupyter Notebook software on their own computer.</p> <p>The course includes a compulsory project that needs to be implemented and evaluated by the instructor before the end of the quarter.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Literature and Study Materials</b>  | <p>The course loosely follows the book 'Digital Image Processing' Rafael C. Gonzalez Richard E. Woods. 3rd ed. Additionally Richard's Szeliski Book: <a href="https://szeliski.org/Book/">https://szeliski.org/Book/</a> is used. Slides used during the lectures are made available via Brightspace. Theory and practical exercises, as well as the Python assignments (via Jupyter Notebook) are made available for download via Brightspace. During the course several pointers to on-line MOOCs and video lectures will be given.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Assessment</b>                      | <ul style="list-style-type: none"> <li>- Final written exam (50% of course grade): a written exam Scheduled at the end of the quarter is offered covering &amp; testing the acquired knowledge level of the topics discussed in the lectures. A grade above or equal 5.0 is required to pass the course &amp; for this grade element to contribute to the total course grade.</li> <li>- Hands-on Python Lab assignments (25% of course grade): Pass/ Fail weekly practical lab assignments. They must be submitted for approval within the weekly-indicated deadlines. Students can solve their assignments at home (using an own computer) or during the lab sessions. A grade of above or equal 5.0 on the hands-on assignments (passing ~50% of the lab assignments) are a prerequisite for entering the final exam or the resit exam &amp; for this grade element to contribute to the total course grade.</li> <li>- Project design &amp; analysis ( 25% of course grade): A quarter-long python based project must be submitted for approval within the indicated deadlines. Students can solve their assignments at home (using an own computer) and during the project sessions. A grade above or equal 5.0 is required to pass the course &amp; for this grade element to contribute to the total course grade.</li> </ul> <p>Resit:</p> <ul style="list-style-type: none"> <li>- Resit exam (50% of course grade): covering all materials of the plenary lectures, working groups and Python assignments, is scheduled at the end of the second quarter.</li> <li>- No resit opportunity for lab assignments.</li> <li>- Resit project (25% of course grade): an extra opportunity to submit the project is offered in Q3 with the limitation of a max grade of a 6.0 for passing the project requirements.</li> </ul> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p> |   |
| <b>Enrolment / Application</b>         | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE). Registration for this course takes place via Osiris, separately from the exam registration. | <b>Course Contents</b>                 | <p>The course provides basic knowledge and hands on experience in content analysis for the full range of different types of multimedia, including audio, speech, text, images and video. The emphasis is on techniques needed to develop systems that provide users with a variety of functionalities, e.g., search, organization, discovery and sharing. An important aspect of the course is learning to differentiate between building and evaluating applications from a technological and human point of view. The course builds on concepts from signal processing (spectrogram analysis and basic audio classification) and on image processing (2-D filtering, visual features, segmentation and basic image classification). It introduces new concepts such as text classification, automatic speech recognition and multimodal video indexing. It makes the bridge between fundamental techniques and applications that allow users to interact with multimedia collections at a level that goes beyond a signal and encompasses aspects of human interpretation of the meaning and use of multimedia content.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |
| <b>Study Goals</b>                     | <p><b>Study Goals</b><br/> <b>Multimedia signals:</b><br/> Remembering: describe different sources of multimedia signals.<br/> Remembering: characterize the impact of editing on multimedia.<br/> Understanding: differentiate between objective and subjective descriptions of multimedia objects.<br/> differentiate between objective and subjective descriptions of multimedia objects.</p> <p><b>Multimedia systems:</b><br/> Remembering: name the elements of the workflow of a multimedia system (in particular, a search engine).<br/> Remembering: describe the user goals that a multimedia system has been designed to meet and the domain in which it operates.<br/> Understanding/Analysing: establish a simple set of requirements with respect to which a multimedia system can be evaluated.<br/> Understanding: explain the use of basic machine learning techniques in the implementation of multimedia systems.<br/> Applying: carry out simple computations for evaluating multimedia systems.<br/> Analysing: explain challenges of a specific example of multimedia content analysis.<br/> Evaluating: evaluate failure modes of multimedia descriptors or analysis methods.</p> <p><b>Audio Analysis:</b><br/> Remembering: describe and carry out the steps necessary to extract audio features used for audio analysis.<br/> Understanding: explain the advantages of basing audio features on human perception.<br/> Applying: build and test a simple audio classifier.<br/> Analysing: compare and contrast feature extraction methodologies for speech vs. music processing systems</p> <p><b>Speech Analysis:</b><br/> Remembering: describe the basic elements of human language and its production.<br/> Remembering: name the modules of a speech recognition system and describe their function and interaction.<br/> Applying: build a simple model (e.g., a vector space model) for indexing and retrieving either text documents or speech recognition transcripts.<br/> Evaluating and Analysing: discuss characteristics of speech recognition transcripts and their impact on multimedia systems.</p> <p><b>Image analysis:</b><br/> Remembering: name basic (global and local) visual features and describe their typical uses.<br/> Remembering: describe the steps necessary to extract basic (global and local) visual features and describe their typical uses.<br/> Remembering: describe, set up, and test a simple classifier for visual material.<br/> Applying: implement some basic image descriptors from its corresponding description.<br/> Analyse: compare and contrast different visual features with respect to a specific use case.<br/> Evaluating: hypothesise about how certain visual features may describe objects and depictions of objects in multimedia content.</p> <p><b>Video analysis:</b><br/> Remembering: name basic (global and local) visual features and describe their typical uses.<br/> Understanding: describe the differences between edited and unedited video<br/> Applying: implement some basic video descriptors from its corresponding mathematical description.<br/> Analysing: compare and contrast different video features or video analysis techniques.<br/> Evaluating: hypothesise about expected feature responses in edited video and experimentally validate this.</p> <p><b>Multi-modal analysis:</b><br/> Remembering: name and explain the difference between high- and low-level feature fusion.<br/> Evaluating: identify the weak points in various currently existing multimedia systems and offer constructive suggestions for improvements that are finally implemented.<br/> Creating: suggest a multimodal approach to an existing single modality solution.<br/> Creating and Evaluating: set up and evaluate a simple system for analyzing multimedia material.</p> <p><b>Critical thinking:</b><br/> Understanding: explain the difference in performance testing of an application from a technological and human point of view<br/> Evaluating: evaluating an application from a technological and human point of view<br/> Evaluating: setting up an experimental design to evaluate an application from a technological and human point of view</p> |   |
| <b>Education Method</b>                | Lectures and labs                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Assessment</b>                      | <p>Labs (pass/fail) and a written exam. Participation is required at the labs. The written exam is a closed-book exam.</p> <p>A make-up lab can be requested only in extreme situations related to the personal health and well-being of the student or immediate family members. Make-ups are not possible once the quarter is completed. A "pass" on the course labs cannot be carried over to future quarters. If the student passes only part of the course, all parts need to be retaken.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Enrolment / Application</b>         | <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p> <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).<br/> Registration for this course takes place via Osiris, separately from the exam registration. | <b>Expected prior knowledge</b>         | Required:<br>programming experience from CSE1100 or equivalent                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |
|                                         | Strongly advised:<br>experience with algorithms and data structures (priority queue, graph algorithms etc) such as from Algorithms and Datastructures (CSE1305);<br>experience with constructing proofs, such as from Reasoning and Logic (CSE1300)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Course Contents</b>                  | After completing this course, the student can apply, reproduce, and give relevant properties and definitions of<br>1. graph algorithms,<br>2. greedy algorithms<br>3. divide and conquer,<br>4. dynamic programming and<br>5. network flow algorithms.<br>The student can also<br>6. prove the correctness of these algorithms,<br>7. determine the running time of algorithms both analytically as well as experimentally,<br>8. implement algorithms efficiently, and<br>9. provide well-argued advice about which problems can be solved best using which algorithms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |
| <b>Study Goals</b>                      | Please see course contents. A more detailed description can be found on BrightSpace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Education Method</b>                 | Lectures (possibly only online / pre-recorded)<br>Each lecture includes a number of multiple choice questions and a selection of especially the difficult components of the material. Students are expected to study some of the topics at home.<br><br>Tutorials (possibly only online)<br>In these interactive sessions we take you through some example assignments (both implementation and written ones).<br><br>Scheduled classroom lecture hours may be used for a combination of the above, as announced by the lecturer.<br><br>Skill circuit assignments<br>To train with the learning objectives, several assignments at exam level, but also more accessible ones are available on BrightSpace as elements in the skill circuit. For some of them feedback can be requested from teaching assistants or other students if handed in on time.<br><br>Similarly, students can train for the digital test by making the implementation assignments in the skill circuit. Correctness of the code will be automatically checked.                                                                                                                                                                                                                                                                                                                   |   |
| <b>Literature and Study Materials</b>   | The study material consists of the book Algorithm Design by John Kleinberg and Eva Tardos (2005), Addison Wesley ISBN 13: 9780321372918 or 9780321295354 and some documents made available through BrightSpace (such as a manual of proving techniques and the master's method for solving simple recurrent relations).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Assessment</b>                       | The final grade of the course consists of the following components:<br><br>Computer exam part 1 in week 5 (P1)<br>Computer exam part 2 in week 10/11 (P2)<br>Written exam in week 10/11 (W)<br><br>Final grade<br>The final grade for the course is computed as follows:<br>$P = 0.5 P1 + 0.5 P2$<br>If $P < 5$ or $W < 5$ , the final grade is $\min(P, W)$ .<br>Else the final grade is $0.4 W + 0.6 P$<br><br>Both parts P and W can be retaken, in individual exam moments in the resit week.<br><br>Computer exam (P)<br>Algorithm design and implementation skills are assessed through two exams of two scheduled exam hours each. Together these form the grade for the computer exam (P). The computer exam needs to be submitted through Weblab, but IntelliJ is available within the exam environment. Resitting P implies redoing both parts.<br><br>Written exam (W)<br>At the end of the quarter a written examination of two scheduled exam hours is given that partly consists of multiple choice and partly of open questions. The written exam primarily assesses proving skills and (application of) algorithms and algorithmic theory.<br><br>These partial results are valid only in the current academic year.<br><br>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4). |   |
| <b>Permitted Materials during Tests</b> | None                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Enrolment / Application</b>          | Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).<br>Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Expected prior knowledge</b>        | Proof techniques (such as by induction or contradiction), set theory, recursive definitions, trees and graphs. For example from CSE1300 or equivalent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Course Contents</b>                 | Run-time complexity of algorithms. For example from CSE2310 or equivalent.<br><br>This course introduces three areas of the theory of computation.<br><br>First, automata are used to recognize words in (formal) languages, and we will discern several types of languages along with the types of automata that can recognize them.<br><br>Second, once we have an intuition about languages, we discuss the topic of computability, where you will learn not only what kinds of problems a computer can solve but also how to prove this.<br><br>Third, we will examine the class of computable problems and make a distinction between "easy" and "hard" problems and delve into the famous problem: $P = NP$ ?<br><br><b>Study Goals</b><br>After this course, the student can:<br>1. parse and construct automata and languages.<br>2. prove a problem to be computable.<br>3. manipulate and construct grammars for context-free languages.<br>4. describe the differences between different types of automata and grammars and their limitations, specifically that there are problems that are algorithmically unsolvable.<br>5. prove languages to be non-regular using the pumping lemma.<br>6. describe the classes P, NP, and NPC and explain why $P = NP$ ? is an open problem.<br>7. verify a proof that shows that a problem is NPC.<br><br><b>Education Method</b><br>Engaging interactive lectures for which the student studies the material at home. During the lecture, the students test their knowledge via multiple choice questions and the teacher explains difficult topics on demand.<br><br>Lab course in the form of optional take-home assignments, 8 times during the quarter. Students solve these assignments individually and hand them in weekly according to predetermined deadlines. Students correct each others work followed by a round of feedback by teaching assistants.<br><br><b>Literature and Study Materials</b><br>1. Textbook (see Books), chapters 0, 1, 2 (2.1-2.3), 3, 4, 5 (5.1), 7.<br>2. Supplementary material (lecture slides, video lectures).<br><br><b>Books</b><br>Michael Sipser, Introduction to the Theory of Computation, Third, International Edition, Cengage Learning. ISBN 978-1-133-18781-3.<br><br><b>Assessment</b><br>Note: if you do not use the international version, then section numbers and exercises will be different!<br>A written, closed-book exam. The exam may consist partially of multiple choice questions, but there are definitely open questions.<br><br>The final grade of the course is based on the final exam for 100%.<br><br>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4).<br><br><b>Permitted Materials during Tests</b><br>None<br><br><b>Enrolment / Application</b><br>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).<br>Registration for this course takes place via Osiris, separately from the exam registration. | <b>Expected prior knowledge</b>         | No prior knowledge is expected from the student.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Course Contents</b>                  | This course introduces the following aspects in digital design: combinational digital systems, sequential systems, complex combinational and sequential building blocks, reconfigurable hardware and complex digital systems. All the important aspects of digital design will be discussed: number systems, Boolean algebra, combinational logic, 2-level and multilevel networks and reduction techniques/design tools, timing hazards, Moore/Mealy machines, Finite State Machines (FSM) and more. The lab starts with the realization of simple circuits and will end with complex systems realized on an FPGA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Study Goals</b>                      | The student (at the end of the course) will have learned the two fundamental notions of digital systems, namely combinational and sequential networks, and will have learned the basics of VHDL. First, the student will be able to translate non-digital functions to a digital representation. Second, the student is subsequently able to establish the needed combinational and/or sequential networks that have to obey specific design requirements (e.g., area, timing, and functionality). Furthermore, the student is able to model simple circuits in VHDL and understand them. The student will have gained enough knowledge to follow more advanced course, such as, computer architecture, computer systems, and embedded systems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Education Method</b>                 | Lectures and lab.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Assessment</b>                       | <p>* Multiple-choice exam and successful completion of lab.</p> <p>* Weekly online tests (5x) that can lead to "striking out an incorrect answer" at the first upcoming exam when 80% of the online tests questions are correctly answered. This rule does not apply for resits.</p> <p>There are two requirements for students to pass the course. First, an obligatory lab must be successfully completed. Only successful completions are registered. Second, a written exam (comprising 20 multiple-choice questions) must be taken resulting in a passing grade, i.e., 6 or higher. Each year there are two possibilities (regular exam in the same quarter and a resit in the subsequent quarter) to take the exam according to the exam regulations that also defines the validity duration of the exam results.</p> <p>In order to motivate students to study the course during the quarter it is given, an online test system (via Brightspace) is set up with up to 15 multiple-choice questions. The questions are put online in sets of 3 during a period of 5 weeks and relate to any of the material given in preceding weeks. Upon correctly answering 80% or more of these questions, 1 incorrectly answered multiple-choice of the first ensuing exam will be stricken. Once again, this online test result will only count for the first upcoming exam that is given in the same quarter and does not count for the resit nor for exams in subsequent years.</p> <p>Furthermore, interested and motivated students are given the opportunity to interact more with the lecturer via study groups in 5 meetings spread over 5 weeks. Registration is required in order to participate in these groups as the number of seats is limited. One task of students participating in these study group is to come up with multiple choice questions that can be used in the earlier mentioned online test. After discussion and vetting by the lecturer, each group will select 3 questions for the weekly sets. As a bonus for their participation, each student in each group will receive a pass for the three questions selected in the meeting.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4).</p> |   |
| <b>Permitted Materials during Tests</b> | Book and lecture slides, excluding old exams and tests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |
| <b>Enrolment / Application</b>          | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |

| <b>Course Contents</b>                  | The course offers an introduction to real-time programming in an embedded system context. The student acquires the principles of real-time programming in C (interrupts, multitasking, event-driven application design, etc.) through a simple embedded real-time operating system (Embedded-RTOS). The course further looks at the principles of an Embedded-RTOS, its operation, and how real-time applications may be programmed using an Embedded-RTOS. The lectures are accompanied by a lab consisting of two parts: (i) an extensive introduction into C programming, and (ii) a hands-on lab in which students acquire the skills of designing and implementing control software for a home-brewed robot platform.                                                                                                                                                                                                                                                    |   |
| <b>Study Goals</b>                      | <p>The learning objectives for this course can be summarized as follows:</p> <ul style="list-style-type: none"> <li>- At the end of this course, the student should know how to employ the principles of real-time programming, on top of embedded real-time operating systems. In order to achieve this, the student must be able to illustrate the characteristics of embedded-systems programming, to formulate the principles of real-time programming and to explain the mechanisms behind Embedded-RTOSes;</li> <li>- The secondary goal of this course is to provide the theoretical and the experimental training, allowing the student to differentiate the principles of good embedded systems design and quantify the estimated time to achieving an embedded-software project;</li> <li>- At the end of this course, the student should be able to use the development environment and tool chain needed for programming the hardware used in the lab.</li> </ul> |   |
| <b>Education Method</b>                 | Lectures (20 hrs) + programming lab (72 hrs) + self study (48 hrs)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |

| <b>Parts</b>                           | The lab component requires hardware, which will be made available to registered participants in the course. A deposit is required for the hardware, which will be returned when the hardware is handed in.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Course Contents</b>                 | <p>This course gives an introduction to the design and implementation of Operating Systems, the software that manages hardware and software resources on modern computing machinery. Topics discussed in class include:</p> <ul style="list-style-type: none"> <li>- function and structure of Operating Systems, system calls, interrupts, and exceptions, dual-mode execution, kernel architecture, device drivers</li> <li>- processes, running multiple processes, and the various algorithms for CPU scheduling and their properties</li> <li>- threads, inter-process communication, programming for concurrent execution and the danger of race conditions</li> <li>- process synchronization, critical sections, mutual exclusion, and mechanisms for these, deadlocks and solutions</li> <li>- memory management techniques, virtual memory, paging and page table management</li> <li>- protection and security, access control, security policies and mechanisms, side-channel attacks</li> <li>- IO and storage, programming with IO, hard disk drives, disk scheduling, SSDs, RAID;</li> <li>- file systems, block allocation, directory structures, file systems in practice.</li> </ul> <p>Concepts and principles discussed in in this course are generally valid for any operating systems, specific implementations like Linux are used as illustrations.</p> |   |
| <b>Study Goals</b>                     | <p>Students are able to describe the fundamental problems and solutions in Operating Systems (resource management, dealing with concurrent tasks, abstracting from hardware) and apply them to practical problems.</p> <p>Students are able to choose and defend solutions to new systems problems.</p> <p>Students are able to design and implement basic operating system algorithms such as process/thread scheduling, thread synchronization, page replacement, disk IO scheduling, etc.</p> <p>Students are able to conduct experiments with the goal of evaluating system performance, scalability, and other non-functional requirements.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Education Method</b>                | <p>Lectures and Lab assignments in Linux on the Raspberry Pi.</p> <p>Homework to practice exam-like questions are handed out during the semester. The homework are self-assessed with an option to discuss during office hours or Q&amp;A sessions that are scheduled twice per semester. Additional feedback is possible during office hours.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |

| <b>Course Contents</b>                 | The goal of the course is to acquaint students with the basic Machine Learning concepts and algorithms. Specifically, the course will cover parametric and non-parametric density estimation, linear and non-linear classification, unsupervised learning including clustering and dimensionality reduction, performance evaluation of predictive algorithms and ethical issues in machine learning.                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Study Goals</b>                     | After successfully completing this course, the student is able to:<br>- explain the basic concepts and algorithms of machine learning and their underlying statistical concepts.<br>- implement, apply and evaluate basic ML algorithms in Python.<br>- explain the concept of and identify (implicit) bias in data and ML algorithms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Education Method</b>                | The course comprises two lectures and one (four-hour) lab session per week.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Assessment</b>                      | Computer exam: 100% of the final grade.<br><br>Reparation: There is one resit per year for the digital exam.<br>The passing grade is 5.8.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |
| <b>Enrolment / Application</b>         | Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)<br>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).<br>Registration for this course takes place via Osiris, separately from the exam registration. | <b>Course Language</b>                  | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Course Contents</b>                  | <p>The term "Big Data" describes datasets that are either too big or change too fast or both to be processed on a single computer.</p> <p>Big Data Processing provides an introduction to systems and algorithms used to process Big Data. The main focus of the course is programming and engineering big data systems; initially, the course explores general programming primitives that span across big data systems and touches upon distributed systems, databases and filesystems. Then, the course examines in detail the implementation of data analysis algorithms in Spark and Flink, in the context of batch, streaming, and graph processing applications.</p>                                                                                                                                                                     |   |
| <b>Study Goals</b>                      | <p>After the end of the course, the students should be able to:</p> <ul style="list-style-type: none"> <li>- Apply basic data processing operations (filtering, folding, projecting, etc)</li> <li>- Explain basic techniques (vector clocks, consensus) in distributed systems</li> <li>- Explain basic data management techniques in distributed databases</li> <li>- Explain the major components of batch processing systems</li> <li>- Create batch algorithms for novel (unseen) practical problems</li> <li>- Explain the difference between iterative/non-iterative algorithms</li> <li>- Explain basic graph algorithms and their implementation batch processing systems</li> <li>- Describe in which scenarios streaming algorithms are most applicable</li> <li>- Apply basic streaming algorithms to practical problems</li> </ul> |   |
| <b>Education Method</b>                 | The teaching method consists of lectures, lab sessions and homework.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Literature and Study Materials</b>   | Teaching materials are provided here: <a href="https://burcuku.github.io/cse2520-bigdata/">https://burcuku.github.io/cse2520-bigdata/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Books</b>                            | <p>The course, by design, touches upon various current technologies; as such, there is no single source of truth. The following is an indicative list of resources where more information can be found.</p> <ol style="list-style-type: none"> <li>1. M. Kleppmann, Designing data-intensive applications. O'Reilly Media, Inc., 2017.</li> <li>2. T. Akidau, S. Chernyak, and R. Lax, Streaming systems: The what, where, when, and how of large-scale data processing. O'Reilly, 2018.</li> <li>3. B. Chambers and M. Zaharia, Spark: The definitive guide. O'Reilly Media, Inc., 2017.</li> </ol>                                                                                                                                                                                                                                            |   |
| <b>Assessment</b>                       | <p>The assessment is based on practical assignments (homework and lab sessions) as well as the final exam.</p> <p>The assignments form 40% of the final grade and the exam 60%. The assignment grade is calculated as the mean grade of all assignments; non submitted assignments are graded with 0.</p> <p>The resit covers only the exam. It is not possible to resit the lab assignments. Partial grades (assignments or exam) cannot be transferred to subsequent years.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4).</p>                                                                                                                                                                                                                                         |   |

| <b>Course Language</b>                  | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Expected prior knowledge</b>         | <p>Courses considered required, i.e. students are strongly recommended to have passed all:</p> <p>CSE1100 Object-oriented programming<br/> CSE1305 Algorithms and Data Structures<br/> CSE1200 Calculus<br/> CSE1205 Linear Algebra<br/> CSE1210 Probability Theory and Statistics</p> <p>CSE2510 Machine Learning<br/> CSE2520 Big Data Processing</p> <p>Specific topics that are assumed as prior knowledge include:<br/> Discrete mathematics: set intersections, unions, and differences.<br/> Linear algebra: matrix multiplication, linear systems, SVD, and eigendecompositions.<br/> Probability and statistics: multivariate Gaussian distribution and correlation and covariance (matrices).<br/> Programming: Java, Scala or Python programming skills.<br/> Data structures: arrays, linked lists, hash tables, and trees.</p> <p>These requirements are not enforced and for information purposes only. Gaps in prior knowledge will impede success in this course. Students are expected to be responsible for their own study success. We are transparent in our expectations to enable students to make the right choice for their skill set.</p> |   |
| <b>Course Contents</b>                  | The goal of the course is to acquaint students with the main techniques for the mining of big data sets. Specifically, the course will cover algorithms for similar-item retrieval, frequent itemset mining, counting of events, sequential data mining, privacy, large scale clustering and classification, collaborative filtering, and dimension reduction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Study Goals</b>                      | <p>Explain and implement common data mining algorithms</p> <ul style="list-style-type: none"> <li>- PageRank algorithm</li> <li>- frequent item-set mining</li> <li>- unsupervised algorithms for big data: BFR and CURE</li> <li>- sequential data mining methods</li> <li>- Singular-Value Decomposition and CUR decomposition</li> </ul> <p>Critically evaluate, motivate and apply data mining algorithms to real-world challenges</p> <ul style="list-style-type: none"> <li>- large scale machine learning algorithms</li> <li>- algorithms for the retrieval of similar items</li> <li>- collaborative filtering algorithms</li> </ul> <p>Explain the relevance and impact of data mining in our lives</p> <ul style="list-style-type: none"> <li>- explain relevance and context of application areas of data mining</li> <li>- explain basic concepts of the privacy/ethical aspects of data mining</li> <li>- explain and apply visual data mining principles</li> </ul>                                                                                                                                                                                 |   |
| <b>Education Method</b>                 | <p>The course comprises two lectures and one (four-hour) lab course per week.</p> <p>The weekly lab assignments are optional. TAs will be available for questions during the lab hours.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Literature and Study Materials</b>   | <p>The reading material comes from the book "Mining Massive Datasets" by Anand Rajaraman, Jure Leskovec, and Jeffrey Ullman. In particular, the student will have to read chapters 1, 3, 5, 6, 7, 9, 10, 11, and 12. Additional reading material in the form of scientific papers will be provided.</p> <p>The guest lecturers will provide reading material during the course.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Assessment</b>                       | <p>All material provided during the course becomes part of the study material.</p> <p>Digital exam counts for 100% of the final grade.</p> <p>Reparation: There is one resit per year for the digital exam.<br/> The passing grade for the exam is 5.8.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Permitted Materials during Tests</b> | <p>Pen, ruler</p> <p>No other materials are allowed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Enrolment / Application</b>          | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).<br/> Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |

| <b>Course Language</b>                  | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Course Contents</b>                  | <p>This course introduces artificial intelligence techniques that focus on learning, optimization and self organisation. We cover numerical techniques that can be grouped as computational intelligence including:</p> <ul style="list-style-type: none"> <li>Neural networks</li> <li>Evolutionary Systems</li> <li>Swarm intelligence</li> <li>Reinforcement learning</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Study Goals</b>                      | <p>After completing this course, you should be able to:</p> <ul style="list-style-type: none"> <li>LO1: Position Computational Intelligence (CI) as a field in AI</li> <li>LO2: Explain concepts such as problem space, fitness, and optimization</li> <li>LO3: Understand the working and limitations of CI techniques</li> <li>LO4: Select the most appropriate CI technique for a given problem</li> <li>LO5: Apply Reinforcement Learning techniques for a given problem</li> <li>LO6: Apply different types of neural networks for a given problem</li> <li>LO7: Apply evolutionary and swarm techniques to solve given problems</li> </ul>                                                                                                                                                                                        |   |
| <b>Education Method</b>                 | Lectures + practicum                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Literature and Study Materials</b>   | <p>In this course, we use different material for each topic:</p> <ul style="list-style-type: none"> <li>- For introduction to CI, neural networks, and genetic algorithms: Book "Artificial intelligence - A guide to intelligent systems, third edition" by Michael Negnevitsky</li> <li>- For reinforcement learning we use the online book "Reinforcement learning: An introduction" by Sutton and Barto. Available at: <a href="http://incompleteideas.net/sutton/book/ebook/the-book.html">http://incompleteideas.net/sutton/book/ebook/the-book.html</a></li> <li>- For Neural Networks we use the book: "Deep learning" by Goodfellow, Bengio and Courville. Available at: <a href="https://www.deeplearningbook.org/">https://www.deeplearningbook.org/</a></li> <li>- For other topics, we use scientific articles.</li> </ul> |   |
| <b>Assessment</b>                       | <p>If a reader is provided, this also is part of the study material.</p> <p>Written Examination (50%)<br/>Group Assignments (50%)</p> <p>Practicum and exam are PARTS of you final grade and will not considered as separate grades in OSIRIS. Only your final grade for a year will be registered.<br/>For the exact calculation of the final grade, please see the sheets of the introductory lecture.</p> <p>The written exam has one resit in the same academic year. The practical does not have a resit (as it is groupwork).</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4).</p>                                                                                                                                                                           |   |
| <b>Permitted Materials during Tests</b> | Calculator, pen and paper                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |
| <b>Enrolment / Application</b>          | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p>                                                                                                                   |   |

## Bachelor 3rd year TI 2022

### Prerequisites

Please note! The entry requirements are mentioned in the regulations <https://www.tudelft.nl/en/student/eemcs-student-portal/education/rules-regulations>. If there are differences between what is mentioned here and what is mentioned in the regulations, that what is mentioned in the regulations is binding.

To be able to participate in CSE3000 Research Project you must have passed all the courses of the first year + the first semester of the second year + the CSE2000 Software Project if you are from cohort 2018 or later. If you are from cohort 2017 or before, you must have passed all the courses of the first and the second year of the bachelors programme.

If you didnt pass the required courses/projects and think that not participating in the project will result in unduly study delay you may hand in an application for an entry requirements exemption. You will receive more information during assemblies and by e-mail.

### Introduction 1

Registration for exams and registration for courses and projects

All elective courses and projects in year 3 require registration through Osiris, which will be open in Q2. Registration for the end project will be done through ProjectForum.

For the exams of all the courses you have to register at least two weeks before the day that they take place. More information is available on: <https://www.tudelft.nl/en/student/eemcs-student-portal/education/registration-courses-and-examinations>.

If you decide after your register that you dont want to participate in the project or exam dont forget to cancel your registration.

### Introduction 2

In the third year you will follow a minor. For more information you can go to <https://www.tudelft.nl/en/education/programmes/minor/>.

If after your Bachelors you want to do a Masters now is the time to orientate yourself. Keep an eye on the announcements on Brightspace about the master events.

| <b>Course Contents</b>                 | This course comprises an individual research project on a selected topic within computer science, supervised by an active researcher in the field. It should result in a scientific paper (of at most 8 two-column or 14 single-column pages) describing the research question, results, conclusions and reflection. The course is completed by a conference day with poster presentations by all students.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |    |
| <b>Study Goals</b>                     | <ol style="list-style-type: none"> <li>1. The student has an in-depth understanding of a selected area of computer science beyond that available from other undergraduate courses, at or near state of the art.</li> <li>2. The student can execute a small research project and report about it, which includes that he/she is able to <ol style="list-style-type: none"> <li>a. search and interpret scientific literature, critically assess scientific work, and the relevance for his/her own research project,</li> <li>b. clearly (re)formulate and motivate a provided research question,</li> <li>c. execute an appropriate research method,</li> <li>d. write a research plan with help of a given template,</li> <li>e. use, explain and justify adequate research and design methodologies,</li> <li>f. apply theory to the performed project,</li> <li>g. use techniques for interpretation and verification and base conclusions on results,</li> <li>h. answer the research question in a clear way,</li> <li>i. write a scientific paper with help of a given template,</li> <li>k. write a review on research papers of other students,</li> <li>l. criticize his/her own results,</li> <li>m. present the performed research,</li> <li>n. discuss and reflect on reproducibility and integrity of the performed research.</li> </ol> </li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |    |
| <b>Education Method</b>                | <p>During the course, the students may work and discuss in groups. At least once a week they meet with their supervisor. Peer feedback as well as feedback from the responsible professor is organized on essential steps in the research project:</p> <ol style="list-style-type: none"> <li>1. A research proposal</li> <li>2. A midterm feedback meeting</li> <li>3. A scientific paper, describing the research (question, results and conclusions)</li> <li>4. A poster summarizing the research</li> </ol> <p>Additionally, support and/or lectures are given regarding research methodology, finding and evaluating scientific work, scientific writing and presenting, and responsible computer science.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |    |
| <b>Prerequisites</b>                   | Students get permission to participate in the Research Project once they have completed 1) all courses of the first year, 2) all courses of the first half of the second year of the bachelor programme, and 3) the Software Project (CSE2000).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |    |
| <b>Assessment</b>                      | <p>First, a pass is needed for the Information Literacy assignment.</p> <p>The final grade for your project is then computed based on a weighted sum of four main components:</p> <ol style="list-style-type: none"> <li>1. Content (40%) <p>Assessment of related scientific work: Student shows ability to critically assess (previous) scientific work.</p> <p>Research/design methodology: The student is able to use, explain and justify adequate research and design methodologies.</p> <p>Scientific method: The chosen research approach is adequate and the work is reliable.</p> <p>Interpretation of results: Student uses techniques for interpretation and verification and base conclusions on results.</p> <p>Responsible engineering: The student adequately reflected on the reproducibility and integrity of the performed research.</p> </li> <li>2. Quality of presentation on paper (30%) <p>Argumentation: Student expresses argumentation coherently and concisely.</p> <p>Structure and references: Organisation of the content is satisfactory. References are well documented.</p> <p>Motivation: The motivation of the work is sufficiently clear.</p> <p>Quality of language: The student uses correct spelling and grammar.</p> </li> <li>3. Process (20%) <p>Planning: Student adequately managed the project.</p> <p>Independence: Student took initiative and needed little guidance.</p> <p>Peer feedback and communication: Student interacted well with peers/supervisor(s) and gives clear feedback to peers.</p> </li> <li>4. Poster Presentation (10%) <p>Presentation/poster content and performance: Student demonstrates extensive knowledge of the subject, visuals are clear.</p> </li> </ol> <p>There is no possibility for a repair option. If necessary, you can do a new project at the next iteration. This course is offered in Q2 and Q4.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4).</p> |    |
| <b>Enrolment / Application</b>         | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via ProjectForum in weeks 2.8-2.9 for Q4 and weeks 4.6-4.7 for Q2. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |    |
| <b>Special Information</b>             | <p>Upon special request, it is possible for students to research a self-proposed topic. For this, they will need to submit a research proposal (including motivation, relevant literature and about five novel research questions) to the course organization via an email to <a href="mailto:rp-cs-ewi@tudelft.nl">rp-cs-ewi@tudelft.nl</a> before February 1 for Q4 and before September 1 for Q2. The proposal should include suggestions for relevant responsible professors or research groups. If the proposal is permitted, it will also be open for other students to join, and it will be treated like any other proposed topic in the group assignment, which means it is not guaranteed to be selected for execution unless the group is complete.</p> <p>Upon further special request, it is possible to do this research project as a research internship project at another university under the following conditions:</p> <ul style="list-style-type: none"> <li>* All conditions for self-proposed topics as described above apply.</li> <li>* The research takes place within 10 weeks (from writing the research plan to presenting your results), conform the regular schedule of the course.</li> <li>* The student(s) find a remote supervisor, arrange and pay for their own travel and housing.</li> <li>* The student(s) perform(s) a peer review during the period.</li> <li>* The student(s) make(s) a suitable assignment on scientific writing during the period.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |    |

|               |                                                                                                                                                                                                                                                     |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Co-Instructor | <p>* The final examination will take place in week 10 at the TU Delft (if necessary through teleconference) and the grade is agreed upon by the remote supervisor, the TUD responsible professor and the TUD examiner.</p> <p>Dr. M.M. de Weerd</p> |

| Course Language                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| Expected prior knowledge        | In order to take this course, you should know how to program in at least one (not necessarily functional) language, for example Java as taught in Object Oriented Programming (CSE1100). You should also be familiar with basic principles in the design of programming languages, e.g. by taking the course Concepts of Programming Languages (CSE2120).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| Course Contents                 | <p>Functional programming is a style of programming where programs are constructed by defining and applying functions. In pure functional code, the output of a function only depends on the value of its arguments, so the same expression always produces the same result. This is in sharp contrast to imperative and object-oriented languages, where every statement can have side effects that influence the results of other statements.</p> <p>Apart from the absence of side-effects, another important feature of most functional programming languages are their powerful type systems. By modeling the different classes of data used in a program, types can be used to structure programs and detect many common errors that would otherwise go unnoticed. Certain languages with so-called dependent type systems can even specify any imaginable functional property in the type of a program, guaranteeing that the program works as it is supposed to before it is ever executed.</p> <p>Why study functional programming?</p> <p>Functional programming allows you to model the real world at a high level of abstraction in order to develop software that is clear, concise, and correct.</p> <p>By learning functional programming, you will also learn new ways to think about programs that make you a better programmer in any programming language.</p> <p>Functional programming languages are becoming increasingly commonplace, and other mainstream languages are integrating more functional features (lambdas, higher-order functions, pattern matching, immutable data, ...)</p> <p>Pure functional programming makes it easy to reason about program correctness by using techniques such as equational reasoning, property-based testing, and formal verification.</p> <p>Static typing and immutability allow you to quickly change and refactor an existing program with confidence that the result is correct.</p> <p>Functional programming languages such as Haskell and Agda include many recent developments from the research on programming languages, which usually take 10 to 30 years to make their way into mainstream languages. By learning them you will get an idea how the future of programming languages might look like.</p> |   |
| Study Goals                     | <p>In the first part of this course, you will learn how to program in Haskell, a purely functional programming language. Concretely, you will learn...</p> <ul style="list-style-type: none"> <li>how to write programs that can manipulate and return functions as first-class data.</li> <li>how to define and manipulate your own data structures, by using algebraic datatypes, pattern matching, and recursion.</li> <li>how to automatically test important properties of your programs with the QuickCheck tool.</li> <li>how to avoid code duplication and write code at a higher level of abstraction by using type parameters and type classes.</li> <li>how to avoid unnecessary computation and program with infinite data structures by relying on lazy evaluation.</li> <li>how to distinguish between pure and impure computations, and use monads to write programs that make this difference explicit.</li> </ul> <p>In the second part of this course, you will learn how to use Agda, another purely functional programming language that is similar to Haskell but has a more powerful dependent type system. In this part, you will learn...</p> <ul style="list-style-type: none"> <li>how to express logical properties as types through the Curry-Howard correspondence.</li> <li>how to develop Agda programs interactively with the typechecker and detect errors as you are writing the program.</li> <li>how to enforce invariants of your programs at the type level by using indexed datatypes and dependent pattern matching.</li> <li>how to formally prove properties of purely functional programs by using the identity type and equational reasoning.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| Education Method                | <p>The course work consists of the following activities:</p> <ul style="list-style-type: none"> <li>2 instruction sessions per week, typically consisting of 45 minutes of lecture followed by 45 minutes of tutorials.</li> <li>4 hours of exercise classes per week.</li> <li>A large project to be implemented in Haskell or Agda.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| Literature and Study Materials  | <p>The official book for the course is Programming in Haskell (<a href="http://www.cs.nott.ac.uk/~pszgmh/pih.html">http://www.cs.nott.ac.uk/~pszgmh/pih.html</a>) by Graham Hutton (second edition).</p> <p>The online book Learn You a Haskell for Great Good! (<a href="http://learnyouahaskell.com/chapters">http://learnyouahaskell.com/chapters</a>) by Miran Lipovaca is free and provides an excellent introduction to many aspects of Haskell that are covered in the course.</p> <p>For part of the course on Agda, reading materials will be distributed via Brightspace.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| Assessment                      | <p>The assessment for this course consists of two parts:</p> <ul style="list-style-type: none"> <li>The course project (50%)</li> <li>The final written exam (50%)</li> </ul> <p>To pass the course, each of these grades (course project and final exam) should be 5.0 or higher, and the final grade should be 5.8 or higher (and will be rounded to the nearest half grade point).</p> <p>The regular exam is held in April in the exam period. There is a resit for the exam during Q4. There is also an opportunity to resubmit an improved version of the project during Q4. The maximum grade for resubmissions of the project is 6.0.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| Enrolment / Application         | <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p> <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. | <b>Expected prior knowledge</b>        | CSE1205 Linear Algebra, CSE1100 OO programming, CS1210 probability theory and statistics, CS1200 Calculus                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Course Contents</b>                 | This course introduces the basics of quantum information from a computer science perspective. Emphasis is given to 1) the actual programming of quantum computers and 2) understanding rigorously their power and limitations from a complexity point of view. Taking this class will also prepare students for the master level courses from QuTech academy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Study Goals</b>                     | <p>After the course, the students will be able to:</p> <ol style="list-style-type: none"> <li>1. Manipulate single qubits and predict the measurement outcomes after a sequence of quantum gates.</li> <li>2. Manipulate multiple qubits and predict the measurement outcomes after a sequence of quantum gates.</li> <li>3. Decompose a gate into a sequence of gates from a universal discrete set.</li> <li>4. Describe basic quantum algorithms and primitives such as Bernstein-Vazirani and the quantum Fourier transform. This includes predicting the success probability of the algorithm (if applicable) and explaining the complexity of the algorithm.</li> <li>5. Independently describe standard textbook material beyond the class content such as Shors algorithm for factoring.</li> </ol>                                |   |
| <b>Education Method</b>                | The course will follow a blended approach. Each week, the students will be asked to 1) read the lecture notes in advance of the theory lectures and 2) solve the weekly programming assignment before the tutorial lectures. Class time will be divided into theory lectures and tutorial lectures. The theory lectures will include small online interactive quizzes and will cover the main concepts of the week. In the tutorials we will discuss the theory behind the programming assignments and jointly solve some challenging parts of the assignments or other exercises.                                                                                                                                                                                                                                                         |   |
| <b>Assessment</b>                      | There will be weekly theory and programming assignments. Completion with a passing grade will be necessary to take the final exam. The grade of the course will be the grade of the final exam.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Enrolment / Application</b>         | <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p> <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. | <b>Course Contents</b>                 | <p>Traditionally, Artificial Intelligence (AI) applications are realized as centralized solutions, where a single entity, e.g., an organization, collects massive amounts of data from end users to provide a suite of AI-powered services. The ethical concerns such centralized AI solutions pose (e.g., fairness, accountability, transparency, and privacy) are increasingly evident.</p> <p>This course introduces collaborative artificial intelligence, which facilitates interactions among intelligent agents, including humans and AI agents, to realize decentralized AI applications. The topics covered include:</p> <ul style="list-style-type: none"> <li>* Co-active design of decentralized AI systems</li> <li>* Negotiation among autonomous agents</li> <li>* Agent communication and interaction protocols</li> <li>* Agent coordination mechanisms</li> </ul> |   |
| <b>Study Goals</b>                     | <p>Upon completion of this course, a student would have learned to:</p> <ul style="list-style-type: none"> <li>* Compare centralized and collaborative AI paradigms.</li> <li>* Apply co-active design to solve a collaborative AI problem.</li> <li>* Describe the principles of automated negotiation for facilitating agent cooperation.</li> <li>* Describe the conceptual underpinnings of agent interaction protocols.</li> <li>* Describe the conceptual underpinnings of agent coordination mechanisms.</li> <li>* Create an automated negotiating agent in the Genius Web platform.</li> </ul>                                                                                                                                                                                                                                                                             |   |
| <b>Education Method</b>                | Lectures + Practicum                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Assessment</b>                      | <ul style="list-style-type: none"> <li>* Written Examination (50%)</li> <li>* Group Assignments (50%)</li> </ul> <p>The exam and the assignments are both intermediate results, and will not count separately for the next academic year. Only the final grade will remain. For the exact calculation of the final grade, see the introductory lecture.</p> <p>The written exam has one resit in the same academic year. The group assignments (projects) do not have a resit. The projects take place during the quarter. In case of a failing grade for the projects, a repair option can be discussed.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p>                                                                                                                                                  |   |
| <b>Enrolment / Application</b>         | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p>                                                                                                                                                               |   |

| <b>Study Goals</b>                     | <p>The course provides students a broad introduction to the foundational aspects of modern cryptography. At the end of the course, the students can explain the algorithmic properties of cryptography primitives, and their mathematical (algebraic) foundations. The course explicitly aims at the deeper background of the security of cryptographic primitives, rooted fundamental properties of modular algebra. The first week introduces cryptography and discusses a representative primitive for public and private key cryptography, namely AES and RSA. Next, the required algebra background is thoroughly built up. This covers integers and their properties such as the Euclidean algorithm, fundamental theorem of arithmetic, definition and properties of groups, rings and fields, in particular over <math>\mathbb{Z}</math> and polynomials, Fermats little theorem, and the Chinese remainder theorem. With that knowledge, in the second part of the course, different cryptographic primitives are discussed, as well as their algorithmic details and security aspects. This covers both theoretical aspects as well as more practical ones. Additionally, during the lab lectures, we will also work with mathematical frameworks (e.g., Sage, Magma) that are commonly used in cryptography.</p> <p>After successful completion of the course, you will be able to, for example:</p> <p>Algebra part:</p> <p>recognize and use the algebraic structure of a (sub)ring, (sub)field or (sub)group<br/> apply the Chinese remainder theorem<br/> apply the division algorithm in a ring of polynomials over a field<br/> determine whether or not a given polynomial is irreducible over a given field, apply the remainder theorem<br/> construct a simple algebraic extension field <math>F(a)</math> of a field <math>F</math><br/> construct a finite field of order <math>p^n</math> for any prime number <math>p</math> and integer <math>n &gt; 0</math><br/> recognize and use the algebraic structure of a cyclic group when it occurs<br/> determine the generators and the subgroups of a given finite cyclic group</p> <p>Cryptography part:</p> <p>work with the concepts of the block and stream ciphers,<br/> understand symmetric and public-key encryption, digital signatures, and their interconnections<br/> explain algorithms such as LFSR, DES, AES, and RSA.<br/> select, compare, and reason about the practical application of aforesaid algorithms, for example, in view of their safety and efficiency<br/> apply the results of the first part (algebra) to modern cryptographic algorithms</p> |   |
| <b>Education Method</b>                | Algebra and cryptography part: lectures combined with assignments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Assessment</b>                      | Two assignments (20%) and a 3-hour written exam (80%).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |

| <b>Course Contents</b>                 | Combinatorial optimisation problems such as scheduling or optimally playing a board game are often NP-hard. Most of the algorithms in earlier courses run in polynomial time and cannot be directly used for solving NP-hard problems. In this course you will learn some new algorithms, and use these, but also concepts from earlier courses on algorithm design, to solve NP-hard problems.                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Study Goals</b>                     | <p>The students are able to position exact and approximate algorithms for combinatorial search problems within AI.</p> <p>The students are able to apply best-first and A* search to combinatorial problems.</p> <p>The students are able to improve exhaustive combinatorial search by applying simple pruning and propagation techniques.</p> <p>The students are able to apply heuristically-guided Monte Carlo Tree Search for the example of playing a board game.</p> <p>The students are able to apply Monte Carlo simulations to planning problems.</p> <p>The students are able to improve simulation-based planning with statistical methods.</p> <p>The students are able to explain the dynamic programming design principle in simple stochastic settings.</p>                                                                    |   |
| <b>Education Method</b>                | <p>The course consists of 2 hours of lectures and 4 hours of lab per week. The lectures are used to introduce NP-hard problems and algorithmic techniques to deal with them. The labs are used to try the (algorithmic) concepts.</p> <p>The course has graded, formative programming assignments. In the assignments you are asked to apply the technique to (a variant of) such a problem by implementing (part of) the algorithm and running it on a set of problem instances. We expect to have three such programming assignments, taking about 8-10 hours each, and performed in small groups.</p>                                                                                                                                                                                                                                       |   |
| <b>Assessment</b>                      | <p>The final grade is computed based on a weighted average of the grade for the programming assignments and the final written exam, as follows:</p> <p>A = unrounded, unweighted arithmetic mean of assignment grades<br/>E = unrounded exam grade</p> <p><math>C = 0.3 * A + 0.7 * E</math><br/>C is rounded to the nearest 0.1</p> <p>To pass the course in terms of grades, the student must satisfy the conjunction of these constraints:</p> <p>A &gt; 5.0<br/>E &gt; 5.0<br/>C &gt; 5.7</p>                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Enrolment / Application</b>         | <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p> <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. For more information, see:<br/><a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p> |   |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Course Contents</b>                 | <p>Traditionally interaction with computer systems moved from text-based (e.g., terminals) to graphical user interfaces (GUI). These evolved to a wider range of platforms than just desktop computers, to include computer kiosks, tablets, and smart phones. As technology systems (e.g., expert systems, recommender systems) increase in complexity, a standard graphical user interface (GUI) is often not sufficient to harness their power. This course will therefore consider developments in intelligent adaptive interfaces, but also alternative modalities for interaction such as Voice user interfaces (VUI), augmented reality (AR), and embodied agents.</p> <p>This course will cover four aspects of HCI systems:</p> <ul style="list-style-type: none"> <li>a) Identifying functional and non-functional requirements.</li> <li>b) Design of interactive and adaptive systems.</li> <li>c) Prototyping of these systems.</li> <li>d) User-centered Evaluation of these systems.</li> </ul> |   |
| <b>Study Goals</b>                     | <p>After this course, students will be able to:</p> <p>Objective 1. Understand the concepts and theories of human-computer interaction. Furthermore, they will be able to explain basic concepts from the relevant theories in cognitive and social sciences.</p> <p>Objective 2. Illustrate and compare methods of "user-centered engineering (UCE)", involving future users in various stages of the design and development process.</p> <p>Objective 3. Apply "user-centered" methods appropriately, as a team; as part of design, development, and evaluation of software systems.</p> <p>Objective 4. Apply ethics procedures for user studies (e.g., privacy, consent).</p> <p>Objective 5. Describe the perspectives and values of multiple stakeholders at different stages of the user-centered engineering process (requirements, design, and evaluation).</p>                                                                                                                                       |   |
| <b>Education Method</b>                | <p>This course consists of 8 2-hour lectures and 16 2-hour labs, of which 8 are shared and 8 are specifically for HCI. In the HCI specific labs you will work on assignments related to the tasks necessary for the group work. In the rest of the time (including the shared labs) you can work on the group work under supervision of the TA's who are available for feedback.</p> <p>Starting from Week 1, students form groups and work on a project, to be handed in in week 9. Students are expected to work 6 hours per week (each) on the project assignment.</p> <p>Expected workload is 16 hours for attending lectures, 25 hours of reading study material and preparing lectures, 32 hours for attending lab sessions, 59 additional hours for group assignment, and 8 hours for exam preparation (total 140 hours).</p>                                                                                                                                                                           |   |
| <b>Literature and Study Materials</b>  | <p>Book: David Benyon. Designing User Experience: A guide to HCI, UX and interaction design (4th Edition)</p> <p>Slides and Articles will be available on Brightspace</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Assessment</b>                      | <p>Mandatory assessments:</p> <ul style="list-style-type: none"> <li>Group-work assessment (LO2-LO5) (4-6 people): 50% (w.3.9) (Based on written report)</li> <li>Exam (LO1): 50% (w. 3.10)</li> </ul> <p>Students will need at least a 5 on group-work and exam, and average of both of at least 5.8 to complete the course. Groups will peer-review contribution to group work on a number of aspects. In case of large deviations this will be used to adjust individual grades for the group work.</p> <p>Formative assessments:</p> <p>TA's will be available during the labs for formative feedback. TA's are also available to record and resolve any issues with group dynamics.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 29, sub 4)</p>                                                                                                                                                                                              |   |
| <b>Enrolment / Application</b>         | <p>Courses of the bachelor CSE are only open to students with an active and valid registration for the B-CSE programme or an EEMCS bridging programme (CS, ES, CE) in accordance with article 8 of the Implementation Regulation in the Dutch EEMCS Teaching and Exam Regulations (article 5 in the English translation for CSE).</p> <p>Registration for this course takes place via Osiris, separately from the exam registration. For more information, see: <a href="https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/">https://www.tudelft.nl/en/student/faculties/eemcs-student-portal/education/registration-courses-and-examinations/</a></p>                                                                                                                                                                                                                                                                                          |   |
| <b>Co-Instructor</b>                   | U.K. Gadiraju                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
