Honours Programme Master Architecture and the Built Environment

Year 1

AR9026HPM	Research Project I Honours Programme Master	5
Course Coordinator	Prof.dr.ir. A.C. den Heijer	
Responsible for assignments	Prof.dr.ir. A.C. den Heijer	
Contact Hours / Week x/x/x/x	Individual piece of work of 5 ECTS in the period of 3 quarters.	
Education Period	2 3 4	
Start Education	2	
Exam Period	4	
Course Language	English	
Course Contents	General set-up of the Honours Programme Master Architecture and the Built Environment (HPM A+BE): The HPM Architecture and the Built Environment as a whole amounts to 20 credits, on top of the regular Masters programme, and is divided in two parts: A) Interfaculty part (5 EC) Students need to choose one of three interfaculty courses organized by the TU Delft wide Honours programme. B) Faculty part (15 EC) Students carry out a research project linked to one of the facultys current research programmes. The faculty part consists of two course modules: - Research Project I (AR9026HPM, 5 EC): thematic and methodical development of a self-chosen topic within the facultys current research programmes, resulting in a research proposal. - Research Project II (AR9027HPM, 10 EC):(individual) in-depth (design-) research,resulting in an academic research report and exhibition (poster presentation). Can be further developed from the explorative study carried out in MSc 1-2 semester and/or in conjunction with the graduation studio (contingent upon: 1) acceptance (based on availability) into the studio and 2) approval of a short proposal by the studio coordinator).	
Study Goals	The ambition of the TU Delft and the faculty is to offer an intellectually stimulating study programme for talented and academically ambitious students, which runs parallel to the regular two-year Masters curriculum, with a specific focus on academic research.	
Education Method	The HPM Architecture and the Built Environment student will carry out a targeted piece of design-based research, running parallel to the regular masters curriculum. In a master-apprentice system, students will set up and carry out their own research linked to one of the current research programmes, under the personal guidance of an experienced tutor or researcher.	
Assessment	The responsible research tutor supervising the student will evaluate and assess the results of the Research Project I (AR9026HPM, 5 EC). Expected products: - Thematic and methodical development of an individual study topic; - Completed research proposal, presentation of results and possible perspectives for further study. All HPM Architecture and Built Environment students are expected to complete their regular Masters programme (120 EC) and the parallel Honours programme (15 EC) within 2 academic years.	
Enrolment / Application	Application and selection for the Honours Programme Master Architecture and the Built Environment takes place each year in September and October (Q 1). All faculty students are informed about the start of the application process through their student mail in September. Students who are interested should send a written motivation (± 300 words) including an indication of research topics and methods of your interest and your Curriculum Vitae to HonoursProgramme-BK@tudelft.nl. Dont forget to mention your Masters track and student number (this is not your TOIS number). Please include examples of possible research results such as articles, exhibitions, an analysis carried out as part of an internship or possibly the final essay of the course Academische Vaardigheden 3 (BK6AC3). On the basis of the application documents, the faculty Honours Committee will make a selection of students who will be invited for an interview. Please note that the HPM Architecture and the Built Environment starts only once a year, in the Fall semester. The HPM Architecture and the Built Environment is not open to exchange students. If you have any questions, please contact the HPM faculty coordinator: HonoursProgramme-BK@tudelft.nl.	
Special Information	The maximum marking period is 10 work days.	
Period of Education	MSc year 1: Q 2, 3, 4	
Course evaluation	For the course evaluations, see the Brightspace page 'Evaluations TUD' (requires enrolment).

Honours Programme Master Architecture and the Built Environment

Year 2

AR9027HPM	Research Project II Honours Programme Master	10
Course Coordinator	Prof.dr.ir. A.C. den Heijer	
Responsible for assignments	Prof.dr.ir. A.C. den Heijer	
Contact Hours / Week x/x/x/x	Variable: individual piece of work of 10 ECTS in the period of 4 quarters.	
Education Period	1 2 3 4	
Start Education	1	
Exam Period	4	
Course Language	English	
Course Contents	In the second year of the HPM programme (MSc 3&4, Q5-8) the student develops an individual, (design-) research-oriented study trajectory which is either: - Developed in conjunction with the Graduation Studio the student has chosen, together with the studio coordinator and main tutor, or: - Developed individually, possibly based on the explorative study carried out in Q2-4 of the first year, in conjunction with an individual research tutor, resulting in an integral academic research paper. This reflective study will be carried out in the second year of the Masters programme: - MSc3: research, preparation and presentation of an in-depth thematic study (can be in conjunction with the graduation studio); - MSc4: further development of the thematic study in an academic report/paper and presentation in conjunction with the graduation project, or with the academic tutor.	
Study Goals	The ambition of the TU Delft and the faculty is to offer an intellectually stimulating study programme for a select group of academically ambitious, excellent students, in conjunction with the international, two-year Masters curriculum, with a focus specifically on academic research. This gives the TU Delft the opportunity to bind outstanding students with curiosity for research, and raise their interest in an academic career.	
Education Method	The HPM student will carry out targeted (design) research, running parallel with the regular master curriculum. In a master-apprentice system, the student will work individually in close connection to one of the current research programmes, under the guidance of an experienced tutor or researcher from the responsible chair.	
Assessment	The responsible design- and/or research tutor supervising the study, in conjunction with the responsible chair and research programme coordinator will assess the results of study for AR9027HPM. Expected products: - Development and presentation of an individual honours study project; - Closing report and presentation in conjunction with the individual graduation project or with an individual research tutor. All Honours Programme Master students are expected to complete their integral MSc study programme and the parallel Honours trajectory within 2 academic years.	
Enrolment / Application
