| <b>Course Language</b>                  | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Summary</b>                          | The course covers basic principles and methods required for the design and selection of heat and mass transfer equipment (for instance heat exchangers and thermal separation processes). This allows for the integration of heat & mass transfer principles to design process equipment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Course Contents</b>                  | <p>Thermal energy can be converted or stored. Heat exchangers are needed in either case.</p> <p>This course will cover:</p> <ul style="list-style-type: none"> <li>Fundamentals of heat &amp; mass transfer,</li> <li>Design of different types of heat exchangers (shell and tube, plate, finned tubes ), regenerators/recuperators, cooling towers, and furnaces,</li> <li>Fouling of heat exchanger surfaces,</li> <li>characteristics of equipment for various separation processes</li> <li>the role of mass transfer in the sizing and design of the separation equipment.</li> <li>Cost Analysis,</li> <li>Pinch Technology</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Study Goals</b>                      | <p>By the end of this course, you'd be able to design and rate heat &amp; mass transfer equipment. This can help you, for instance, to:</p> <ul style="list-style-type: none"> <li>- Quantify heating and cooling processes and requirements in various industrial applications such as: metallurgy, waste processes, food, agriculture, desalinization, freeze-drying.</li> <li>- Explain design requirements for different industrial heating and cooling processes.</li> <li>- Analyze existing industrial heating and cooling processes.</li> <li>- Identify decarbonization solutions for existing industrial heating and cooling processes.</li> <li>- Design suitable components/facilities/technologies for industrial heating and cooling processes.</li> <li>- Can describe and formulate thermodynamics equations and models for the selection and design of thermal separation processes.</li> <li>- Comprehends the role of heat and mass transfer in the dimensioning of equipment for separation processes.</li> </ul>                                                                                             |   |
| <b>Education Method</b>                 | Lectures, assignments, self-study, team work, tutorials                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Course Contents</b>                 | <p>There are several technologies which can obtain heat or cool from the local environment, which are called ambient temperature sources. In this course, you will learn the process of design for ambient or near ambient temperature sources. Typically, air source systems are more variable and less efficient and less easy to operate, but easily accessible, while the shallow subsurface offers a more stable and efficient source, but less easy to access. Water sources are in between. In this course you will learn which pros and cons prevail under various conditions and how you can make an efficient design for either type.</p> <p>You will investigate two different technologies in depth, and encounter several key design aspects including:<br/> Field data collection: Undertake the design and go to the field to measure important quantities that inform the design (based on a location)<br/> Quantification of heat transfer processes<br/> Technology sizing and integration<br/> Identify key modes of operation<br/> Predicted performance</p> <p>Remark: Heat pump is applied. Only basic energy flows. No details on HP itself</p> |   |
| <b>Study Goals</b>                     | <p>By the end of this course you are able to:<br/> design a H&amp;C system with a near ambient temperature H&amp;C source.<br/> evaluate design suitability to be a significant contributor to the energy needs and year-round energy flows: hydraulic connections and various modes of operation.<br/> This requires the integration of various sub technologies which you will also learn to design and quantify:<br/> Borehole Heat Exchanger (BHE), including non-stationary conduction and interference.<br/> Aquathermal: Utilisation of heat from urban water infrastructure: surface, sewerage and drinking water. This includes surveying of field conditions to inform the design process [including data collection in the field].<br/> Other sources of thermal energy: air, asphalt.<br/> Integration with Heat pump and storage facilities.<br/> Design sizing / system capacity.</p>                                                                                                                                                                                                                                                                    |   |
| <b>Education Method</b>                | <p>Type of contact: lectures, workshops/work session, excursion, fieldwork<br/> Expected student participation:<br/> Number of contact hours/week: 4<br/> Room type preference: workshop setting grouped tables<br/> Collegerama: nno<br/> Hybrid: no, fully on-campus</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |

| <b>Course Contents</b>                 | <p>Due to temporal mismatch in availability and demand for heat, heat storage is needed. In this course you will learn that the need for storage is determined by the variations and mismatches in demand and supply profiles. Also, Power to heat is enabled by heat storage. Depending on the required storage requirements (volume, cycle length, temperature level) you will learn to design a heat storage system and quantify heat losses. The heat storage technologies covered in this course are:</p> <ul style="list-style-type: none"> <li>-Sensible heat storage: subsurface, pits, tanks</li> <li>-Latent heat storage: Phase change materials</li> </ul> <p>Because heat storage systems enable the use of heat sources, but are no heat sources themselves, the economics of heat storage is often complex. Therefore, the integration of heat storage in business cases is also covered in this course.</p>                                                                                                                      |   |
| <b>Study Goals</b>                     | <p>After taking this course you are able to:</p> <ul style="list-style-type: none"> <li>Assess the need for heat storage.</li> <li>Identify storage requirements for various supply-demand conditions.</li> <li>Select appropriate storage media for different conditions.</li> <li>Quantify and calculate heat convection, conduction and phase change heat transfer in various heat storage systems.</li> <li>Make a basic design and business case for different heat storage technologies, LCOE.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |

| <b>Course Contents</b>                 | <p>The course provides an overview of sources for heating and cooling, their characteristics, and their role in the energy mix. You will learn to quantify available heating and cooling capacities based on local conditions. The following sources are covered:</p> <ul style="list-style-type: none"> <li>· Solar thermal</li> <li>· Borehole Heat Exchangers</li> <li>· Geothermal</li> <li>· Waste Heat: data centres, industry, cooling demand)</li> <li>· Aquathermal and other environmental sources</li> </ul>                                                                                                                                                                                                                             |   |
| <b>Study Goals</b>                     | <p>By the end of this course you will be able to:</p> <ul style="list-style-type: none"> <li>· classify &amp; contrast available H&amp;C sources</li> <li>· calculate available capacities of heat sources depending on local conditions</li> <li>· establish (heating/cooling) supply profile</li> <li>· build a conceptual, connected model of heating and cooling sources</li> <li>· quantify the heat transport process in H&amp;C sources</li> </ul>                                                                                                                                                                                                                                                                                           |   |

| <b>Course Contents</b>                  | <p>Scope: Due to the growing interest in sustainable energy production, this course presents the fundamentals of geothermal resource exploitation. Students will gain a general understanding of what a geothermal resource is and of the basic steps in their economic exploitation, including lifetime analysis, characterization of a geothermal reservoir, reservoir engineering and system design, basics of the operation and maintenance of geothermal systems, and geothermal field management, as well as some environmental aspects.</p> <p>Contents:</p> <ul style="list-style-type: none"> <li>- Introduction to geothermal energy</li> <li>- Geology and geomechanics</li> <li>- Reservoir characterization</li> <li>- Design of a geothermal system</li> <li>- Geothermal reservoir engineering</li> <li>- Numerical modeling of geothermal doublets</li> <li>- Techno-economic assessment of geothermal systems</li> </ul>                                                                                               |   |
| <b>Study Goals</b>                      | <p>After successfully completing this course you will be able to:</p> <ul style="list-style-type: none"> <li>Classify geothermal systems based on their different geological settings</li> <li>Describe and apply geomechanical principles related to geothermal systems</li> <li>Describe solute and heat transfer in porous media by mathematical equations and explain their role in different geothermal systems (Darcy flow, conductive and convective heat transfer, diffusion and advection equations)</li> <li>Develop a 2D and 3D Finite Element (FE) model in COMSOL describing a direct use geothermal system by implementing real world data</li> <li>Design a prototype geothermal system: <ul style="list-style-type: none"> <li>-Choose the appropriate location and well configuration</li> <li>-Assess the system lifetime, power, generated energy and stochastic economic output</li> <li>-Justify your geothermal development choices from an energy, engineering and economic point of view</li> </ul> </li> </ul> |   |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Expected prior knowledge</b>        | <p>Prior knowledge of algebra and calculus is required. In general, the typical master student in a STEM subject has mathematical competencies that exceed those required for this course.</p> <p>The course builds on some of the ideas covered in the SET course Economics and Regulations of Sustainable Energy Systems in Q1, especially the parts taught by Gideon Ndubuisi and Servaas Storm. We will review some of these ideas, but in general non-SET students will have to catch up.</p>                                                                                                                                                                                                                                                                              |   |
| <b>Course Contents</b>                 | <p>Why do markets create environmental problems? How and when can markets be harnessed to solve environmental problems? Are there environmental limits to economic growth? What should governments do to speed up the energy transition and fight the global climate crisis?</p> <p>This is a course in environmental and ecological economics designed for master students with little background in economics. It introduces students to key economic concepts and theories with respect to:</p> <ul style="list-style-type: none"> <li>- consumption and production</li> <li>- efficiency and welfare</li> <li>- economic growth and sustainability</li> <li>- the choice of environmental policy targets and instruments</li> <li>- integrated assessment models</li> </ul> |   |
| <b>Study Goals</b>                     | <p>After completing the course, students should be able to:</p> <ul style="list-style-type: none"> <li>- explain the main theoretical concepts used in environmental economics and how they relate to one another</li> <li>- explain how a market economy undervalues the environment</li> <li>- explain how environmental economists value the environment</li> <li>- apply economic theory to environmental problems such as climate change</li> <li>- evaluate economic policies for solving environmental problems such as climate change</li> </ul>                                                                                                                                                                                                                        |   |
| <b>Education Method</b>                | Classes, quizzes, and exercises.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Literature and Study Materials</b>  | <p>The main text is:</p> <ul style="list-style-type: none"> <li>- Harris &amp; Roach (2021) Environmental and Natural Resource Economics: A Contemporary Approach (5th ed.), Taylor &amp; Francis.</li> </ul> <p>The course goes beyond the textbook and covers selected topics in more depth, on the presumption that master students have learned how to learn and thus they can learn fast. Additional materials will be posted on Brightspace.</p>                                                                                                                                                                                                                                                                                                                          |   |
| <b>Assessment</b>                      | <p>The final grade is based exclusively on the performance in the final exam.</p> <p>In normal circumstances the assessment is based on a closed-book computer exam on campus, which includes multiple-choice questions. In case of unforeseen circumstances or due to measures resulting from COVID-19, the assessment will be based on an open-book exam.</p>                                                                                                                                                                                                                                                                                                                                                                                                                 |   |

| TPM0931SET                             | Sustainable Energy Innovation and Transitions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 4 |

| <b>Course Contents</b>                 | <p>This course deals with transitions towards sustainability and with theoretical frameworks and strategies for analysing and influencing such transitions. The theoretical frameworks and strategies taught in this course are Strategic Niche Management (SNM), Functions of Innovation Systems (FIS), the Multilevel Perspective, Backcasting and Transition Management. The course focuses on niches around sustainable innovations at the sectoral level as part of larger transitions at the (inter)national level. Since the course is part of the SET program, the lectures and papers focus in particular on sustainable energy innovations and the sustainable energy transition.</p> <p>This course is the first course in the SET Economics &amp; Society profile. It can also be followed by other MSc students as an elective. Due to overlap, is not allowed to follow this course if you have already followed course TPM033A or 4413TRIG.</p>                                                                                                                                                                                                                                                                                    |   |
| <b>Study Goals</b>                     | <p>After this course, the student:</p> <ol style="list-style-type: none"> <li>1. has knowledge of: <ul style="list-style-type: none"> <li>* the most relevant innovation theories to analyse transitions towards sustainability: functions of innovation systems, strategic niche management, transition theory and the multilevel perspective.</li> <li>* the key characteristics of the strategies strategic niche management, backcasting and transition management, which can be applied to explore and facilitate transitions towards sustainability.</li> </ul> </li> <li>2. has insight in: <ul style="list-style-type: none"> <li>* the opportunities, limitations, strengths and weaknesses of the intervention strategies and the innovation theories and concepts.</li> </ul> </li> <li>3. has experience and basic skills in: <ul style="list-style-type: none"> <li>* exploring and evaluating niche developments and innovation processes which aim to contribute to the sustainable energy transition.</li> <li>* formulating research questions.</li> <li>* writing a coherent, well-structured and well argued academic report.</li> <li>* critically reflecting on work of others and on their own work.</li> </ul> </li> </ol> |   |
| <b>Education Method</b>                | <p>This course consists of lectures, homework assignments and a project assignment consisting of group work and individual work. In the project assignment student groups analyse a self-chosen sustainable energy niche. The technology in the niche must have the potential to radically change the energy sector and must be in the phase of first introduction the niche phase. The aim of the analysis is to assess the current status of the niche in question, identify bottlenecks and opportunities, and propose a strategy for enabling further growth of the niche.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Literature and Study Materials</b>  | <p>Scientific articles which are made available via the TU library or via Brightspace.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Assessment</b>                      | <p>Students are evaluated based on the group report (75% of the final grade) and on the individual assignment report (25% of the final grade). Both reports must be completed with at least grade 5.0. Furthermore, students have to deliver weekly homework assignments and participate actively in the lectures. All marks will be expressed on a scale of 1 to 10.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |

| Course Language                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| Expected prior knowledge        | No specific knowledge is required prior to entering the course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |
| Course Contents                 | <p>This course is aimed at high-tech entrepreneurs who have great ideas which they like to implement in established organizations, through intrapreneurship or corporate venturing, or use to start and grow themselves new companies. The course is specifically focused on the business opportunities related to new energy technologies. New, emerging, sometimes radically different energy technologies provide significant opportunities for alternative products and services, new business models and new ways of working for more efficient approaches to resource exploitation and energy production and consumption. Yet to harness these opportunities, it often requires to abandon existing paradigms and search in landscapes more distant from current ones. Entrepreneurial activity is a key driver here and the need to develop the skills to develop and act on innovative business opportunities is increasingly vital. By using evidence-based content, methods, and models this course guides you in the analyses of new venture opportunities by assessing and investigating the commercial potential of implementing new technologies either from a social challenge or technology perspective. Opportunity recognition, product-service innovation, sustainable business modelling, and new venture growth dynamics in the context of networks of established firms and the wider stakeholders are core elements of this course.</p> <p>This course is the third course in the SET Economics &amp; Society profile.</p>                                                                                                                                                                                                                                                                                           |   |
| Study Goals                     | <p>Our goal is to demystify the new venture process, and to help you build the skills to identify and act on innovative opportunities now, and in the future. Upon finishing the course you will be able to:</p> <ol style="list-style-type: none"><li>1. understand how entrepreneurial ideas in the energy sector are shaped and what influences the development of them into viable sustainable business opportunities in the context of both start-ups and corporate venturing;</li><li>2. understand the role of the innovation process, how it depends on the technology and institutional context and be able to apply the generic pattern of development and diffusion for radically new high-tech products or systems;</li><li>3. understand the principles of market segmentation, and apply different niche-strategies to commercialize radical new high-tech products;</li><li>4. understand and apply various methods for developing sustainable/ circular business models for the creation of successful new ventures or innovate existing business models and transform them into desired ones;</li><li>5. Understand different circular economy barriers and strategies, and apply different circular strategies to make business models more circular;</li><li>6. understand the growth stages of new ventures and the role of network-based facilitators, the networks of established firms in the energy sector and the role of stakeholder management.</li></ol>                                                                                                                                                                                                                                                                                                                                                        |   |
| Education Method                | <p>The course is organized into 8 sessions (8 weeks) into 3 learning blocks with an assessment at the end of each. Each session consists of a mixture of lecturing, and discussions of cases, literature and assignments, and presentations. Assignments provide you with opportunities to integrate and apply learnings from each learning block.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |

New York, USA</p> <p>Journal articles: Will be posted on Brightspace-site.<br/>Slides presented in class: Will be posted on Brightspace-site.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| Assessment                      | <p>The assessment is composed of several elements:</p> <ol style="list-style-type: none"><li>1. Active participation during the lectures and learning block assignments. You will be assessed based on the active participation, completing assigned readings, and on time assignment submission of each learning blocks. This will account for the 30% of the final grade.</li><li>2. Group report and final presentation. Proposed group assignment. This consists of two parts. The first part is about analysing the business model of a start-up, identify how the business model works and reflect on it by the literature and come with suggestion to improve or adapt it to new technological opportunities. Then the second part is to identify an established firm in the energy sector that is related to the field of the start-up and analyse for this established firm what the corporate venturing activities are that they have to support new innovations either through internal venturing or by acquiring external ventures. Then analyse how the start-up could contribute to the large firm in terms of making strategic or operational transitions into new energy systems and vice versa what the benefits are for the start-up to become a venture within the established firm. Students will present and submit a final report and will be judged on their ability to understand both theoretical and practical aspects of bringing a technology to the market, and to analyse energy-related business challenges and opportunities in the field of entrepreneurship and innovation. The group grade will be adjusted for individual participation. This will account for the 40% of the final grade.</li><li>3. Individual: Theory quizzes (30%)</li></ol> <p>All marks will be expressed on a scale of 1-10.</p> |   |
| Enrolment / Application         | <p>All students across the various faculties of the Delft University of Technology can take this course by directly enrolling into Brightspace. No other means of registration, such as the app MyTuDelft are needed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |

| <b>Expected prior knowledge</b>        | Basic knowledge on the first and second law of thermodynamics (a short introduction to this will also be provided during the lectures). Students who are missing this we explain the most important concepts again)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Summary</b>                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Course Contents</b>                 | <p>The course consists of the following content:</p> <ul style="list-style-type: none"> <li>-Introduction of thermodynamic cycles for heating and cooling. The working field of refrigeration and heat pumps;</li> <li>-Overview of the most important refrigeration / heat pumps systems: Mechanically driven heat systems, thermally driven systems, solid state systems and gas cycles. Comparison of these systems;</li> <li>-Components of refrigeration and heat pump cycles (compressors, valves, condensers, evaporators, turbines etc.);</li> <li>-analysis of cooling and heating cycles using the 1st and second law of thermodynamics, exergy analysis;</li> <li>-gas liquification;</li> <li>-techno-economic analysis of refrigeration and heat pump cycles;</li> <li>-Working fluids. Refrigerants for mechanical vapour compression; refrigerating machines: limits of application, evaluation of ODP and GWP;</li> <li>-Gas cycle refrigerating machines. Gas-phase cycles;</li> <li>-Magnetic refrigeration / heat pumping;</li> </ul>                                                                                                                                                                                                             |   |
| <b>Study Goals</b>                     | <p>By the end of this course, the students are able to:</p> <ul style="list-style-type: none"> <li>explain, reproduce and apply thermodynamic concepts in relation to refrigeration machines and heat pumps, considering their economic and environmental impact.</li> <li>recognize and apply the working principles, specific characteristics and application range of the most relevant methods to generate cooling and heating.</li> <li>explain and apply the concepts of gas liquefaction</li> <li>perform an energy and exergy analysis of refrigeration machines and heat pumps.</li> <li>evaluate the impact of the alternative concepts for refrigerating machines and heat pumps.</li> <li>sizing of heat pump and refrigeration equipment.</li> <li>perform techno-economic analysis of heat pumps and refrigeration systems.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                 |   |

| <b>Course Contents</b>                 | <p>This course is aimed at understanding the dynamics of buildings thermal behavior and at learning how to optimize their design and operation through thermal modeling, &amp; simulation. You will learn to solve problems like: how to shift or reduce peak heating demand to obtain a better match with a renewable energy system. What is thermally more efficient: a heavy concrete building or a light timber-frame building? How effective is night ventilation in warm periods? This course will provide you with answers to questions relating to dynamic thermal behavior in buildings. Amongst others you will learn about:</p> <ul style="list-style-type: none"> <li>- Energy chain from supply to demand and design steps</li> <li>- Basics of thermal comfort</li> <li>- Energy flows in buildings (transmission, ventilation &amp; infiltration, solar heat gains and internal heat gains)</li> <li>- Energy balance</li> <li>- Steady state simulations for peak load and energy usage estimates in pre-design (1 node energy balance model)</li> <li>- Transient simulation: The role of inertia in construction; setting up dynamic balance equations (Fourier equation), setting up a suitable RC network (multi-node energy balances); Solving the equations through finite difference and through transfer functions</li> </ul> <p>This is accompanied by many exercises to understand the optimization of building characteristics and peak shaving/shifting. The course ends up with an overview of energy conversion systems that can be used to supply the needed heating and cooling to buildings.</p> |   |
| <b>Study Goals</b>                     | <p>By the end of this course you will be able to:</p> <ul style="list-style-type: none"> <li>- explain how the heating and cooling needs of a building are determined by diverse building design parameters, weather, occupancy and comfort preferences of occupants.</li> <li>- translate this knowledge into design calculations (using steady state and transient balances) to optimize the energy demand towards zero energy buildings, to size the heating and cooling equipment, and to provide a good indoor thermal comfort.</li> </ul> <p>More specifically, you will be able to:</p> <ul style="list-style-type: none"> <li>- derive the mathematical equations describing the thermal performance of the various building components.</li> <li>- combine these equations to simulate the whole building system.</li> <li>- use dynamic simulations to answer questions about the optimal energy design, heating and cooling capacities, energy use, comfort.</li> <li>- translate the fuzzy term "comfort" into design requirements</li> <li>- simulate how thermostat control allows for peak shaving and shifting.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Education Method</b>                | <p>The course is built around a case study that runs like a common thread between the different course items. The case study is a self-paced individual assignment divided into 4 parts, that are discussed during workshops.</p> <p>Type of contact: Lectures, videos, guided exercises, 3 workshops and excursion. Sometimes we flip the classroom.</p> <p>Number of contact hours/week: 4</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Assessment</b>                      | <p>Formative assessment: 4 assignments with answers for self-study. Each of the assignments is discussed during workshops sessions of 2 hours.</p> <p>Summative assessment: Written exam (50% of grade) + Midterm quiz (50% of grade). The midterm quiz relates closely to the formative assignments.</p> <p>An average grade of 6 (rounded to the nearest 0.5) AND a minimal grade of 5 for the written exam are required to pass.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Course Contents</b>                 | <p>There are several technologies which can obtain heat or cool from the local environment, which are called ambient temperature sources. In this course, you will learn the process of design for ambient or near ambient temperature sources. Typically, air source systems are more variable and less efficient and less easy to operate, but easily accessible, while the shallow subsurface offers a more stable and efficient source, but less easy to access. Water sources are in between. In this course you will learn which pros and cons prevail under various conditions and how you can make an efficient design for either type.</p> <p>You will investigate two different technologies in depth, and encounter several key design aspects including:<br/> Field data collection: Undertake the design and go to the field to measure important quantities that inform the design (based on a location)<br/> Quantification of heat transfer processes<br/> Technology sizing and integration<br/> Identify key modes of operation<br/> Predicted performance</p> <p>Remark: Heat pump is applied. Only basic energy flows. No details on HP itself</p> |   |
| <b>Study Goals</b>                     | <p>By the end of this course you are able to:<br/> design a H&amp;C system with a near ambient temperature H&amp;C source.<br/> evaluate design suitability to be a significant contributor to the energy needs and year-round energy flows: hydraulic connections and various modes of operation.<br/> This requires the integration of various sub technologies which you will also learn to design and quantify:<br/> Borehole Heat Exchanger (BHE), including non-stationary conduction and interference.<br/> Aquathermal: Utilisation of heat from urban water infrastructure: surface, sewerage and drinking water. This includes surveying of field conditions to inform the design process [including data collection in the field].<br/> Other sources of thermal energy: air, asphalt.<br/> Integration with Heat pump and storage facilities.<br/> Design sizing / system capacity.</p>                                                                                                                                                                                                                                                                    |   |
| <b>Education Method</b>                | <p>Type of contact: lectures, workshops/work session, excursion, fieldwork<br/> Expected student participation:<br/> Number of contact hours/week: 4<br/> Room type preference: workshop setting grouped tables<br/> Collegerama: nno<br/> Hybrid: no, fully on-campus</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |

| <b>Course Contents</b>                 | <p>The course provides an overview of sources for heating and cooling, their characteristics, and their role in the energy mix. You will learn to quantify available heating and cooling capacities based on local conditions. The following sources are covered:</p> <ul style="list-style-type: none"> <li>· Solar thermal</li> <li>· Borehole Heat Exchangers</li> <li>· Geothermal</li> <li>· Waste Heat: data centres, industry, cooling demand)</li> <li>· Aquathermal and other environmental sources</li> </ul>                                                                                                                                                                                                                             |   |
| <b>Study Goals</b>                     | <p>By the end of this course you will be able to:</p> <ul style="list-style-type: none"> <li>· classify &amp; contrast available H&amp;C sources</li> <li>· calculate available capacities of heat sources depending on local conditions</li> <li>· establish (heating/cooling) supply profile</li> <li>· build a conceptual, connected model of heating and cooling sources</li> <li>· quantify the heat transport process in H&amp;C sources</li> </ul>                                                                                                                                                                                                                                                                                           |   |
| <b>Education Method</b>                | <p>Lecture (hybrid)<br/>Group work: case study</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |

| <b>Expected prior knowledge</b>        | ME45111SET or equivalent (knowledge about Heating and Cooling demand of Buildings)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |
| <b>Course Contents</b>                 | <p>In this course you will learn how to decide on efficient combinations of energy conversion systems accounting for available heat sources, and how to distribute and control air and energy flows in buildings whilst minimizing carbon emissions and optimizing thermal comfort. To do this, you will learn about:</p> <ul style="list-style-type: none"> <li>- Rational no regret use of heat sources in relation to acceptable temperature levels in buildings &amp; neighbourhoods, depending on buildings insulation standard</li> <li>- Relationship between building systems and large-scale outdoor systems (like ATES or geothermal)</li> <li>- Air handling systems and properties of Humid air. Humidification/de-humidification, and related energy use</li> <li>- Distribution of heat/cold by air systems and low/high temperature</li> <li>- Distribution of heat/cold by hydronic systems and low/high temperature</li> <li>- Distribution of heat/cold by mixed systems</li> <li>- Room emitters and thermal comfort</li> <li>- Basics of control in HVAC systems</li> <li>- Thermal buffers and zoning</li> <li>- Designing a complete renewable-based energy systems for a a building (energy demand, energy supply, distribution)</li> <li>- Example of a complex building including heat pump, ATES, solar collectors, PV, free air cooling and distribution to multiple rooms</li> </ul> |   |
| <b>Study Goals</b>                     | <p>By the end of the course you will be able to:</p> <ul style="list-style-type: none"> <li>- Make substantiated no-regret choices of heat sources to be used in cities and buildings, depending on geographic availability (supply), acceptable temperature levels in the buildings under consideration (demand), and principles relating to rational use of energy sources.</li> <li>- Describe the different ways to distribute heat and cold in buildings, either through air systems or through hydronic (water) systems and their advantages and disadvantages.</li> <li>- Create zones with similar suitable temperature levels compatible with heat sources, distribution and room emitters, accounting for health &amp; comfort and use of renewables.</li> <li>- Engineer required capacity for, and distribution to the zones present in building.</li> <li>- Make a basic design for control engineering and thermal buffering in HVAC systems (Heating, Ventilation and Air Conditioning systems).</li> <li>- Make a complete renewable-based energy design of a building, including an ATES system, at the level of preliminary design</li> </ul>                                                                                                                                                                                                                                                  |   |
| <b>Education Method</b>                | Lectures, workshops, exercises, 2 weeks group work on integration of systems, excursion                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Assessment</b>                      | <p>Formative assessment: a series of short assignments with answers for self-study.</p> <p>Summative assessment: Midterm online exam (75% of grade) and groupwork on integrated design, assessed by short report and presentation (25% of grade). The midterm exam relates closely to the formative assignments.</p> <p>An average grade of 6 (rounded to the nearest 0.5) AND a minimal grade of 5 for the midterm quiz are required to pass.</p> <p>Resit/ Repair opportunities:<br/>In case of an insufficient final result, repair options may exist in accordance with Article 17A Times and number of examinations, sub 1, of the Teaching and Examination Regulations 2024-2025, for:</p> <ul style="list-style-type: none"> <li>- Online midterm quiz: written resit</li> <li>- Group project: resubmit report</li> </ul> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |

| SET3995                                 | Direct Use of Geothermal Energy                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 4 |

| <b>Course Contents</b>                  | <p>Scope: Due to the growing interest in sustainable energy production, this course presents the fundamentals of geothermal resource exploitation. Students will gain a general understanding of what a geothermal resource is and of the basic steps in their economic exploitation, including lifetime analysis, characterization of a geothermal reservoir, reservoir engineering and system design, basics of the operation and maintenance of geothermal systems, and geothermal field management, as well as some environmental aspects.</p> <p>Contents:</p> <ul style="list-style-type: none"> <li>- Introduction to geothermal energy</li> <li>- Geology and geomechanics</li> <li>- Reservoir characterization</li> <li>- Design of a geothermal system</li> <li>- Geothermal reservoir engineering</li> <li>- Numerical modeling of geothermal doublets</li> <li>- Techno-economic assessment of geothermal systems</li> </ul>                                                                                               |   |
| <b>Study Goals</b>                      | <p>After successfully completing this course you will be able to:</p> <ul style="list-style-type: none"> <li>Classify geothermal systems based on their different geological settings</li> <li>Describe and apply geomechanical principles related to geothermal systems</li> <li>Describe solute and heat transfer in porous media by mathematical equations and explain their role in different geothermal systems (Darcy flow, conductive and convective heat transfer, diffusion and advection equations)</li> <li>Develop a 2D and 3D Finite Element (FE) model in COMSOL describing a direct use geothermal system by implementing real world data</li> <li>Design a prototype geothermal system: <ul style="list-style-type: none"> <li>-Choose the appropriate location and well configuration</li> <li>-Assess the system lifetime, power, generated energy and stochastic economic output</li> <li>-Justify your geothermal development choices from an energy, engineering and economic point of view</li> </ul> </li> </ul> |   |

| <b>Expected prior knowledge</b>        | <p>Prior knowledge of algebra and calculus is required. In general, the typical master student in a STEM subject has mathematical competencies that exceed those required for this course.</p> <p>The course builds on some of the ideas covered in the SET course Economics and Regulations of Sustainable Energy Systems in Q1, especially the parts taught by Gideon Ndubuisi and Servaas Storm. We will review some of these ideas, but in general non-SET students will have to catch up.</p>                                                                                                                                                                                                                                                                              |   |
| <b>Course Contents</b>                 | <p>Why do markets create environmental problems? How and when can markets be harnessed to solve environmental problems? Are there environmental limits to economic growth? What should governments do to speed up the energy transition and fight the global climate crisis?</p> <p>This is a course in environmental and ecological economics designed for master students with little background in economics. It introduces students to key economic concepts and theories with respect to:</p> <ul style="list-style-type: none"> <li>- consumption and production</li> <li>- efficiency and welfare</li> <li>- economic growth and sustainability</li> <li>- the choice of environmental policy targets and instruments</li> <li>- integrated assessment models</li> </ul> |   |
| <b>Study Goals</b>                     | <p>After completing the course, students should be able to:</p> <ul style="list-style-type: none"> <li>- explain the main theoretical concepts used in environmental economics and how they relate to one another</li> <li>- explain how a market economy undervalues the environment</li> <li>- explain how environmental economists value the environment</li> <li>- apply economic theory to environmental problems such as climate change</li> <li>- evaluate economic policies for solving environmental problems such as climate change</li> </ul>                                                                                                                                                                                                                        |   |
| <b>Education Method</b>                | Classes, quizzes, and exercises.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Literature and Study Materials</b>  | <p>The main text is:</p> <ul style="list-style-type: none"> <li>- Harris &amp; Roach (2021) Environmental and Natural Resource Economics: A Contemporary Approach (5th ed.), Taylor &amp; Francis.</li> </ul> <p>The course goes beyond the textbook and covers selected topics in more depth, on the presumption that master students have learned how to learn and thus they can learn fast. Additional materials will be posted on Brightspace.</p>                                                                                                                                                                                                                                                                                                                          |   |
| <b>Assessment</b>                      | <p>The final grade is based exclusively on the performance in the final exam.</p> <p>In normal circumstances the assessment is based on a closed-book computer exam on campus, which includes multiple-choice questions. In case of unforeseen circumstances or due to measures resulting from COVID-19, the assessment will be based on an open-book exam.</p>                                                                                                                                                                                                                                                                                                                                                                                                                 |   |

| TPM0931SET                             | Sustainable Energy Innovation and Transitions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 4 |

| <b>Course Contents</b>                 | <p>This course deals with transitions towards sustainability and with theoretical frameworks and strategies for analysing and influencing such transitions. The theoretical frameworks and strategies taught in this course are Strategic Niche Management (SNM), Functions of Innovation Systems (FIS), the Multilevel Perspective, Backcasting and Transition Management. The course focuses on niches around sustainable innovations at the sectoral level as part of larger transitions at the (inter)national level. Since the course is part of the SET program, the lectures and papers focus in particular on sustainable energy innovations and the sustainable energy transition.</p> <p>This course is the first course in the SET Economics &amp; Society profile. It can also be followed by other MSc students as an elective. Due to overlap, is not allowed to follow this course if you have already followed course TPM033A or 4413TRIG.</p>                                                                                                                                                                                                                                                                                    |   |
| <b>Study Goals</b>                     | <p>After this course, the student:</p> <ol style="list-style-type: none"> <li>1. has knowledge of: <ul style="list-style-type: none"> <li>* the most relevant innovation theories to analyse transitions towards sustainability: functions of innovation systems, strategic niche management, transition theory and the multilevel perspective.</li> <li>* the key characteristics of the strategies strategic niche management, backcasting and transition management, which can be applied to explore and facilitate transitions towards sustainability.</li> </ul> </li> <li>2. has insight in: <ul style="list-style-type: none"> <li>* the opportunities, limitations, strengths and weaknesses of the intervention strategies and the innovation theories and concepts.</li> </ul> </li> <li>3. has experience and basic skills in: <ul style="list-style-type: none"> <li>* exploring and evaluating niche developments and innovation processes which aim to contribute to the sustainable energy transition.</li> <li>* formulating research questions.</li> <li>* writing a coherent, well-structured and well argued academic report.</li> <li>* critically reflecting on work of others and on their own work.</li> </ul> </li> </ol> |   |
| <b>Education Method</b>                | <p>This course consists of lectures, homework assignments and a project assignment consisting of group work and individual work. In the project assignment student groups analyse a self-chosen sustainable energy niche. The technology in the niche must have the potential to radically change the energy sector and must be in the phase of first introduction the niche phase. The aim of the analysis is to assess the current status of the niche in question, identify bottlenecks and opportunities, and propose a strategy for enabling further growth of the niche.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Literature and Study Materials</b>  | <p>Scientific articles which are made available via the TU library or via Brightspace.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Assessment</b>                      | <p>Students are evaluated based on the group report (75% of the final grade) and on the individual assignment report (25% of the final grade). Both reports must be completed with at least grade 5.0. Furthermore, students have to deliver weekly homework assignments and participate actively in the lectures. All marks will be expressed on a scale of 1 to 10.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |

| <b>Expected prior knowledge</b>        | No specific knowledge is required prior to entering the course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Course Contents</b>                 | <p>This course is aimed at high-tech entrepreneurs who have great ideas which they like to implement in established organizations, through intrapreneurship or corporate venturing, or use to start and grow themselves new companies. The course is specifically focused on the business opportunities related to new energy technologies. New, emerging, sometimes radically different energy technologies provide significant opportunities for alternative products and services, new business models and new ways of working for more efficient approaches to resource exploitation and energy production and consumption. Yet to harness these opportunities, it often requires to abandon existing paradigms and search in landscapes more distant from current ones. Entrepreneurial activity is a key driver here and the need to develop the skills to develop and act on innovative business opportunities is increasingly vital. By using evidence-based content, methods, and models this course guides you in the analyses of new venture opportunities by assessing and investigating the commercial potential of implementing new technologies either from a social challenge or technology perspective. Opportunity recognition, product-service innovation, sustainable business modelling, and new venture growth dynamics in the context of networks of established firms and the wider stakeholders are core elements of this course.</p> <p>This course is the third course in the SET Economics &amp; Society profile.</p>                                                                                                                                                                                                                                                                                               |   |
| <b>Study Goals</b>                     | <p>Our goal is to demystify the new venture process, and to help you build the skills to identify and act on innovative opportunities now, and in the future. Upon finishing the course you will be able to:</p> <ol style="list-style-type: none"> <li>1. understand how entrepreneurial ideas in the energy sector are shaped and what influences the development of them into viable sustainable business opportunities in the context of both start-ups and corporate venturing;</li> <li>2. understand the role of the innovation process, how it depends on the technology and institutional context and be able to apply the generic pattern of development and diffusion for radically new high-tech products or systems;</li> <li>3. understand the principles of market segmentation, and apply different niche-strategies to commercialize radical new high-tech products;</li> <li>4. understand and apply various methods for developing sustainable/ circular business models for the creation of successful new ventures or innovate existing business models and transform them into desired ones;</li> <li>5. Understand different circular economy barriers and strategies, and apply different circular strategies to make business models more circular;</li> <li>6. understand the growth stages of new ventures and the role of network-based facilitators, the networks of established firms in the energy sector and the role of stakeholder management.</li> </ol>                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Education Method</b>                | The course is organized into 8 sessions (8 weeks) into 3 learning blocks with an assessment at the end of each. Each session consists of a mixture of lecturing, and discussions of cases, literature and assignments, and presentations. Assignments provide you with opportunities to integrate and apply learnings from each learning block.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |

New York, USA</p> <p>Journal articles: Will be posted on Brightspace-site.<br/>Slides presented in class: Will be posted on Brightspace-site.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Assessment</b>                      | <p>The assessment is composed of several elements:</p> <ol style="list-style-type: none"> <li>1. Active participation during the lectures and learning block assignments. You will be assessed based on the active participation, completing assigned readings, and on time assignment submission of each learning blocks. This will account for the 30% of the final grade.</li> <li>2. Group report and final presentation. Proposed group assignment. This consists of two parts. The first part is about analysing the business model of a start-up, identify how the business model works and reflect on it by the literature and come with suggestion to improve or adapt it to new technological opportunities. Then the second part is to identify an established firm in the energy sector that is related to the field of the start-up and analyse for this established firm what the corporate venturing activities are that they have to support new innovations either through internal venturing or by acquiring external ventures. Then analyse how the start-up could contribute to the large firm in terms of making strategic or operational transitions into new energy systems and vice versa what the benefits are for the start-up to become a venture within the established firm. Students will present and submit a final report and will be judged on their ability to understand both theoretical and practical aspects of bringing a technology to the market, and to analyse energy-related business challenges and opportunities in the field of entrepreneurship and innovation. The group grade will be adjusted for individual participation. This will account for the 40% of the final grade.</li> <li>3. Individual: Theory quizzes (30%)</li> </ol> <p>All marks will be expressed on a scale of 1-10.</p> |   |
| <b>Enrolment / Application</b>         | All students across the various faculties of the Delft University of Technology can take this course by directly enrolling into Brightspace. No other means of registration, such as the app MyTuDelft are needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |

| <b>Course Contents</b>                 | This course focuses on AC and DC microgrids. The design and layout of AC and DC microgrids will be defined, including the sizing of different components. Furthermore, attention will be given to the converters, control, and protection challenges in these systems.                                                                                                                                                                                                                                                   |   |
| <b>Study Goals</b>                     | Identify the challenges introduced by distributed generation<br>Describe different microgrids' layouts and sizing<br>Describe the operation and control of power electronic converters in AC and DC microgrids<br>Apply droop control in AC and DC microgrids<br>Describe the role of energy management systems in AC and DC microgrids<br>Identify different potential ancillary services that could be provided by AC and DC microgrids and describe the application of demand side management in AC and DC microgrids |   |
| <b>Education Method</b>                | Lectures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |

| <b>Course Contents</b>                  | <p>The course deals with the development of the electrical power infrastructure as an integrated system consisting of power grid, electricity production and load. The impact of large scale integration of sustainable energy sources (such as wind and solar power) on system reliability and security of supply will be explained. Advanced concepts (MT-HVDC, FACTS, interaction between DC and AC, WAMPAC, interaction transmission and distribution) are treated. The main principles of markets and services (system services, transmission services, ancillary services) will be highlighted. The course aims to provide the student with a thorough understanding of the reliability issues involved in power system design and operation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Study Goals</b>                      | <p>Designing and operating an electrical power system in a reliable, sustainable and affordable way will be a great challenge in the future. After following the course the student understands the planning and operation of the onshore and offshore power system as a whole and the impact of integrating sustainable energy sources at a large scale on system operation and on the transmission and distribution of electrical energy. The student has gained insight in different power transmission and control technologies, balancing, congestion management, interaction between transmission and distribution systems. The student is able to make power system reliability analyses in relation to planning and operation of the power system.</p> <p>Learning objectives(LOs):</p> <p>LO1: Explain the impact of high RES penetration on the resiliency of future power systems.</p> <p>LO2: Analyse the dynamic performance of future power systems with hybrid HVDC/HVAC configurations under high RES penetration.</p> <p>LO3: Design solutions from an integrated planning, operation and control perspective for integrating high RES volumes whilst maintaining the security of supply.</p> <p>LO4: Write a weekly group report to synthesize the analysis and findings from different case studies.</p> |   |
| <b>Education Method</b>                 | <p>Lectures (conceptual aspects)2-4 hours/week, practicum (solution by exercises) 4 hours/week, group interaction, self study, company visit with lecture on site</p> <p>Estimated study load: 112 hours (4 ECTs)<br/>           Lectures 20 hours<br/>           Practical 24 hours<br/>           Self study 68 hours</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Assessment</b>                       | <p>Practicum assignments and digital exam/re-exam</p> <p>The final grade comprises: i) 2.4 points achieved through the 8 practicum assignments (0.3 each); ii) 7.6 grade of the final exam (or re-exam). The maximum achievable final grade is 10. At least 6/10 is needed to pass the course. In case of obtaining a grade lower than 6/10, all parts of the course (exam/re-exam and practicum) need to be retaken.</p> <p>In case of an insufficient final result, repair options may exist in accordance with Article 17A Times and number of examinations, sub 1, of the Teaching and Examination Regulations 2024-2025.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Permitted Materials during Tests</b> | Book, course notes, calculators, and formula sheet are not allowed. All electronic devices (smartphone, tablet, notebook, USB sticks) must be turned off and never be used during the exam.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |

| <b>Expected prior knowledge</b>        | Basic knowledge on the first and second law of thermodynamics (a short introduction to this will also be provided during the lectures). Students who are missing this we explain the most important concepts again)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Summary</b>                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Course Contents</b>                 | <p>The course consists of the following content:</p> <ul style="list-style-type: none"> <li>-Introduction of thermodynamic cycles for heating and cooling. The working field of refrigeration and heat pumps;</li> <li>-Overview of the most important refrigeration / heat pumps systems: Mechanically driven heat systems, thermally driven systems, solid state systems and gas cycles. Comparison of these systems;</li> <li>-Components of refrigeration and heat pump cycles (compressors, valves, condensers, evaporators, turbines etc.);</li> <li>-analysis of cooling and heating cycles using the 1st and second law of thermodynamics, exergy analysis;</li> <li>-gas liquification;</li> <li>-techno-economic analysis of refrigeration and heat pump cycles;</li> <li>-Working fluids. Refrigerants for mechanical vapour compression; refrigerating machines: limits of application, evaluation of ODP and GWP;</li> <li>-Gas cycle refrigerating machines. Gas-phase cycles;</li> <li>-Magnetic refrigeration / heat pumping;</li> </ul>                                                                                                                                                                                                             |   |
| <b>Study Goals</b>                     | <p>By the end of this course, the students are able to:</p> <ul style="list-style-type: none"> <li>explain, reproduce and apply thermodynamic concepts in relation to refrigeration machines and heat pumps, considering their economic and environmental impact.</li> <li>recognize and apply the working principles, specific characteristics and application range of the most relevant methods to generate cooling and heating.</li> <li>explain and apply the concepts of gas liquefaction</li> <li>perform an energy and exergy analysis of refrigeration machines and heat pumps.</li> <li>evaluate the impact of the alternative concepts for refrigerating machines and heat pumps.</li> <li>sizing of heat pump and refrigeration equipment.</li> <li>perform techno-economic analysis of heat pumps and refrigeration systems.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Education Method</b>                | Lectures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Course Contents</b>                 | <p>This course is aimed at understanding the dynamics of buildings thermal behavior and at learning how to optimize their design and operation through thermal modeling, &amp; simulation. You will learn to solve problems like: how to shift or reduce peak heating demand to obtain a better match with a renewable energy system. What is thermally more efficient: a heavy concrete building or a light timber-frame building? How effective is night ventilation in warm periods? This course will provide you with answers to questions relating to dynamic thermal behavior in buildings. Amongst others you will learn about:</p> <ul style="list-style-type: none"> <li>- Energy chain from supply to demand and design steps</li> <li>- Basics of thermal comfort</li> <li>- Energy flows in buildings (transmission, ventilation &amp; infiltration, solar heat gains and internal heat gains)</li> <li>- Energy balance</li> <li>- Steady state simulations for peak load and energy usage estimates in pre-design (1 node energy balance model)</li> <li>- Transient simulation: The role of inertia in construction; setting up dynamic balance equations (Fourier equation), setting up a suitable RC network (multi-node energy balances); Solving the equations through finite difference and through transfer functions</li> </ul> <p>This is accompanied by many exercises to understand the optimization of building characteristics and peak shaving/shifting. The course ends up with an overview of energy conversion systems that can be used to supply the needed heating and cooling to buildings.</p> |   |
| <b>Study Goals</b>                     | <p>By the end of this course you will be able to:</p> <ul style="list-style-type: none"> <li>- explain how the heating and cooling needs of a building are determined by diverse building design parameters, weather, occupancy and comfort preferences of occupants.</li> <li>- translate this knowledge into design calculations (using steady state and transient balances) to optimize the energy demand towards zero energy buildings, to size the heating and cooling equipment, and to provide a good indoor thermal comfort.</li> </ul> <p>More specifically, you will be able to:</p> <ul style="list-style-type: none"> <li>- derive the mathematical equations describing the thermal performance of the various building components.</li> <li>- combine these equations to simulate the whole building system.</li> <li>- use dynamic simulations to answer questions about the optimal energy design, heating and cooling capacities, energy use, comfort.</li> <li>- translate the fuzzy term "comfort" into design requirements</li> <li>- simulate how thermostat control allows for peak shaving and shifting.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Education Method</b>                | <p>The course is built around a case study that runs like a common thread between the different course items. The case study is a self-paced individual assignment divided into 4 parts, that are discussed during workshops.</p> <p>Type of contact: Lectures, videos, guided exercises, 3 workshops and excursion. Sometimes we flip the classroom.</p> <p>Number of contact hours/week: 4</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Assessment</b>                      | <p>Formative assessment: 4 assignments with answers for self-study. Each of the assignments is discussed during workshops sessions of 2 hours.</p> <p>Summative assessment: Written exam (50% of grade) + Midterm quiz (50% of grade). The midterm quiz relates closely to the formative assignments.</p> <p>An average grade of 6 (rounded to the nearest 0.5) AND a minimal grade of 5 for the written exam are required to pass.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |

| <b>Course Language</b>                  | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Summary</b>                          | The course covers basic principles and methods required for the design and selection of heat and mass transfer equipment (for instance heat exchangers and thermal separation processes). This allows for the integration of heat & mass transfer principles to design process equipment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Course Contents</b>                  | <p>Thermal energy can be converted or stored. Heat exchangers are needed in either case.</p> <p>This course will cover:</p> <ul style="list-style-type: none"> <li>Fundamentals of heat &amp; mass transfer,</li> <li>Design of different types of heat exchangers (shell and tube, plate, finned tubes ), regenerators/recuperators, cooling towers, and furnaces,</li> <li>Fouling of heat exchanger surfaces,</li> <li>characteristics of equipment for various separation processes</li> <li>the role of mass transfer in the sizing and design of the separation equipment.</li> <li>Cost Analysis,</li> <li>Pinch Technology</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Study Goals</b>                      | <p>By the end of this course, you'd be able to design and rate heat &amp; mass transfer equipment. This can help you, for instance, to:</p> <ul style="list-style-type: none"> <li>- Quantify heating and cooling processes and requirements in various industrial applications such as: metallurgy, waste processes, food, agriculture, desalinization, freeze-drying.</li> <li>- Explain design requirements for different industrial heating and cooling processes.</li> <li>- Analyze existing industrial heating and cooling processes.</li> <li>- Identify decarbonization solutions for existing industrial heating and cooling processes.</li> <li>- Design suitable components/facilities/technologies for industrial heating and cooling processes.</li> <li>- Can describe and formulate thermodynamics equations and models for the selection and design of thermal separation processes.</li> <li>- Comprehends the role of heat and mass transfer in the dimensioning of equipment for separation processes.</li> </ul>                                                                                             |   |
| <b>Education Method</b>                 | Lectures, assignments, self-study, team work, tutorials                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Computer Use</b>                     | Standard engineering packages including ASPEN                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |

| <b>Course Contents</b>                 | <p>Intelligent Electrical Power Grids - a.k.a. Smart Grids - are the "smartified" version of our electricity infrastructure. By adding controls, communication, and other digital elements these grids are expected to be more flexible, robust, efficient, and capable in order to satisfy the requirements of the future: hosting more renewable sources, catering for an active demand side, or implementing flexible peer-to-peer energy markets.</p> <p>Working with Smart Grids requires knowledge in a variety of disciplines out of electrical engineering, computer science, and mathematics. Of great importance is modeling and simulation, since Smart Grids show a level of complexity and heterogeneity that often can not be covered by analytical methods. In this course you will learn how to describe and assess a Smart Grid, mainly by using numerical tools.</p> <p>You will use various modeling and simulation tools to investigate the properties of smart power grids. Each practical results in a (very) short report. In the end, an electronic exam will be done.</p> <p>This course is part of the Power track of the SET master and can also be chosen by EE master students.</p> <p>Understanding of power flow is expected. Slides and exercises to check if you are up for it are provide on Brightspace.</p> |   |
| <b>Study Goals</b>                     | <p>After this course students are able to</p> <p>LO1: Describe the functions and topologies of cyber-physical energy systems</p> <p>LO2: Implement data driven modelling and numerical simulation of energy systems</p> <p>LO3: Calculate variable power flows based on optimization/probability theory</p> <p>LO4: Synthesize functional requirements of energy management systems</p> <p>LO5: Analyse cyber-security threats, vulnerabilities of ITOT systems, and attack vectors</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Education Method</b>                | <p>The course is organized in the following units, all units have assignments (typically a simulation):</p> <ol style="list-style-type: none"> <li>1: The energy transition and future energy systems (Peter)</li> <li>2: Analysis of steady-state performance in variable operating conditions (Jose)</li> <li>3: Assessment and control of power system dynamic performance (Jose)</li> <li>4: Lab 1 Digital and data driven modelling of interconnected systems</li> <li>5: Lab 2 Simulation and impact analysis of renewables, storage, and demand</li> <li>6: Data acquisition and communication for energy automation (Peter)</li> <li>7: Artificial intelligence-based functionalities for situational awareness (Pedro &amp; Jochen)</li> <li>8: Cyber security of smart grids (Alex)</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Literature and Study Materials</b>  | On Brightspace                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Assessment</b>                      | <p>The final grade of the course consists of the following components:</p> <ul style="list-style-type: none"> <li>Assignment reports (in time!) (50%)</li> <li>Multiple choice Computer Exam (50%)</li> </ul> <p>In order to successfully complete the course you need to score 60% out of 100% in the final grade. All assignments and the reports are mandatory. Practical reports are due until 24h before the next lecture.</p> <p>Final grade calculation: <math>(0.5 * \text{individual assignment} + 0.5 * \text{computer exam})</math></p> <p>Resit/ Repair opportunities:</p> <p>In case of an insufficient final result, repair options may exist in accordance with Article 17A Times and number of examinations, sub 1, of the Teaching and Examination Regulations 2024-2025, for:</p> <ul style="list-style-type: none"> <li>- Assignment reports (in time!): resubmit deliverable</li> <li>- Multiple choice Computer Exam: computer resit</li> </ul> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5).</p>                                                                                                                                                                                                                                                       |   |

| <b>Course Contents</b>                 | This course covers the principles of power conversion with switch-mode circuits with sustainable energy applications in mind. The basic circuits of power electronics are explained, including ac-dc converters (diode rectifiers), dc-dc converters (non-isolated) and dc-ac converters (inverters). Issues specific to power electronics including pulse width modulation, methods of analysis, voltage distortion, power quality and commonly used power semiconductor switches are treated.                                                                                                                                                                                                                                                              |   |
| <b>Study Goals</b>                     | To get acquainted with applications of power electronics; to understand the principles of power electronics; to get an overview of power electronic circuits; to sketch and explain circuit diagram and their specific waveforms and functionalities; To be able to select appropriate circuits for specific power electronics applications.                                                                                                                                                                                                                                                                                                                                                                                                                 |   |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Course Contents</b>                 | <p>Due to temporal mismatch in availability and demand for heat, heat storage is needed. In this course you will learn that the need for storage is determined by the variations and mismatches in demand and supply profiles. Also, Power to heat is enabled by heat storage. Depending on the required storage requirements (volume, cycle length, temperature level) you will learn to design a heat storage system and quantify heat losses. The heat storage technologies covered in this course are:</p> <ul style="list-style-type: none"> <li>-Sensible heat storage: subsurface, pits, tanks</li> <li>-Latent heat storage: Phase change materials</li> </ul> <p>Because heat storage systems enable the use of heat sources, but are no heat sources themselves, the economics of heat storage is often complex. Therefore, the integration of heat storage in business cases is also covered in this course.</p>                                                                                                                      |   |
| <b>Study Goals</b>                     | <p>After taking this course you are able to:</p> <ul style="list-style-type: none"> <li>Assess the need for heat storage.</li> <li>Identify storage requirements for various supply-demand conditions.</li> <li>Select appropriate storage media for different conditions.</li> <li>Quantify and calculate heat convection, conduction and phase change heat transfer in various heat storage systems.</li> <li>Make a basic design and business case for different heat storage technologies, LCOE.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |

| <b>Expected prior knowledge</b>        | ME45111SET or equivalent (knowledge about Heating and Cooling demand of Buildings)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |
| <b>Course Contents</b>                 | <p>In this course you will learn how to decide on efficient combinations of energy conversion systems accounting for available heat sources, and how to distribute and control air and energy flows in buildings whilst minimizing carbon emissions and optimizing thermal comfort. To do this, you will learn about:</p> <ul style="list-style-type: none"> <li>- Rational no regret use of heat sources in relation to acceptable temperature levels in buildings &amp; neighbourhoods, depending on buildings insulation standard</li> <li>- Relationship between building systems and large-scale outdoor systems (like ATES or geothermal)</li> <li>- Air handling systems and properties of Humid air. Humidification/de-humidification, and related energy use</li> <li>- Distribution of heat/cold by air systems and low/high temperature</li> <li>- Distribution of heat/cold by hydronic systems and low/high temperature</li> <li>- Distribution of heat/cold by mixed systems</li> <li>- Room emitters and thermal comfort</li> <li>- Basics of control in HVAC systems</li> <li>- Thermal buffers and zoning</li> <li>- Designing a complete renewable-based energy systems for a a building (energy demand, energy supply, distribution)</li> <li>- Example of a complex building including heat pump, ATES, solar collectors, PV, free air cooling and distribution to multiple rooms</li> </ul> |   |
| <b>Study Goals</b>                     | <p>By the end of the course you will be able to:</p> <ul style="list-style-type: none"> <li>- Make substantiated no-regret choices of heat sources to be used in cities and buildings, depending on geographic availability (supply), acceptable temperature levels in the buildings under consideration (demand), and principles relating to rational use of energy sources.</li> <li>- Describe the different ways to distribute heat and cold in buildings, either through air systems or through hydronic (water) systems and their advantages and disadvantages.</li> <li>- Create zones with similar suitable temperature levels compatible with heat sources, distribution and room emitters, accounting for health &amp; comfort and use of renewables.</li> <li>- Engineer required capacity for, and distribution to the zones present in building.</li> <li>- Make a basic design for control engineering and thermal buffering in HVAC systems (Heating, Ventilation and Air Conditioning systems).</li> <li>- Make a complete renewable-based energy design of a building, including an ATES system, at the level of preliminary design</li> </ul>                                                                                                                                                                                                                                                  |   |
| <b>Education Method</b>                | Lectures, workshops, exercises, 2 weeks group work on integration of systems, excursion                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Assessment</b>                      | <p>Formative assessment: a series of short assignments with answers for self-study.</p> <p>Summative assessment: Midterm online exam (75% of grade) and groupwork on integrated design, assessed by short report and presentation (25% of grade). The midterm exam relates closely to the formative assignments.</p> <p>An average grade of 6 (rounded to the nearest 0.5) AND a minimal grade of 5 for the midterm quiz are required to pass.</p> <p>Resit/ Repair opportunities:<br/>In case of an insufficient final result, repair options may exist in accordance with Article 17A Times and number of examinations, sub 1, of the Teaching and Examination Regulations 2024-2025, for:</p> <ul style="list-style-type: none"> <li>- Online midterm quiz: written resit</li> <li>- Group project: resubmit report</li> </ul> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |

| Education Period                | 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| Start Education                 | 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| Exam Period                     | 2<br>3                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| Course Language                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |
| Course Contents                 | This course teaches basic knowledge about direct energy conversion of light into electricity that takes place in advanced semiconductor devices called solar cells. Another term that denotes the field of direct solar energy conversion into electricity is Photovoltaics (PV). The course starts with explaining the role of PV technology in energy transition towards sustainable energy. It continues with a short overview of solar cell technologies based on different semiconductor materials, PV markets and applications. The main parameters of radiation spectra, and the solar spectrum in particular, are explained. Suitable solar-cell materials and their optical and electronic properties that are relevant to PV energy conversion, such as absorption of light, transport of charge carries, and their recombination-generation, are discussed. The course focuses on solar-cell operating principles that enable illuminated solar cells to deliver electricity. Dark and illuminated "current-voltage (I-V)" characteristics, solar cell external parameters and their measurement are explained. The course treats the conversion efficiency limits of solar cells. The effect of illumination level, temperature, and parasitic resistances on the performance of solar cells is discussed using the equivalent circuit of a solar cell. The optimal design of solar cells is highlighted based on the analysis and minimization of optical and recombination losses in solar cells. A complete PV system is introduced, the individual components and their characteristics are explained. Practical design and sizing rules of PV systems are exercised. |   |
| Study Goals                     | Students learn about renewable energy sources, their potential and role in the energy transition towards sustainable energy. The generation of electricity directly from solar energy using solar cells is the focus of the course. This requires understanding the principles of the photovoltaic energy conversion based on the knowledge of material properties, solar cell structures, and processes of absorption of light and transport of charge carriers in the solar cells. Students learn to evaluate the performance limits of different types of solar cells and can design solar cell structures with minimal optical and collection losses in the energy conversion process. The students know the different components of a PV system and understand the design rules of a PV system for various applications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |

| Literature and Study Materials  | Book Solar Energy: The physics and engineering of photovolataic conversion technologies and systems (Publisher UIT Cambridge 2016), lecture sheets, short instructive videos placed on brightspace, old exams.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| Assessment                      | During instruction sessions you will practice 'exam level' questions. These questions are intended to prepare you for the exam, but are not graded. The final grade is 100% determined by the written exam. All marks will be expressed on a scale of 0 to 10.<br><br>In case of an insufficient result for the written exam, you have the opportunity to take the resit exam in the next quarter.<br><br>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |

| <b>Expected prior knowledge</b>        | Lecture course Photovoltaic Basics (ET4 376)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Course Contents</b>                 | <p>This course will focus on several solar-cell technologies: silicon solar cells based on (multi)-crystalline wafers, thin-film solar cells based on thin silicon films, cadmium telluride (CdTe) and copper-indium-(gallium)-(di)selenide (CIS to CIGS), III-V solar cells and concentrators, and organic and perovskite solar cells. For these various technologies the device concepts, the specific properties of the materials required, and the manufacturing and processing methods will be discussed.</p> <p>Before these technologies will be discussed, an in-depth treatment of semiconductor device physics for solar cells and light-management concepts will be given that are applicable to all technologies. Issues included are recombination at interfaces, passivation, heterojunctions, various principles of light-scattering, anti-reflection coatings, and textured interfaces.</p>                                                                                                                                                                                                                                                                                                                                                                                               |   |
| <b>Study Goals</b>                     | <p>This course aims at an understanding of the different solar-cell technologies. Students are expected to be able to explain the operation of these devices based on the design, processing and material properties. Therefore an understanding of the physics of these technologies is required.</p> <p>The learning objectives (LO) are as follows:</p> <p>LO1: Understand semiconductor processes and light management concepts relevant for solar-cell operation.<br/> LO2: Apply the semiconductor processes and light management concepts to existing state-of-the-art and emerging photovoltaic technologies with the objective to understand the solar-cell design.<br/> LO3: Analyze the origin of various loss mechanisms in solar cells and the impact of different design solutions to achieve optimal performance.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Education Method</b>                | Flipped-classroom video lectures and on-campus instructions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |

| <b>Assessment</b>                      | <p>The course will be assessed by a combination of a written final examination and three graded non-mandatory assignments. The final mark for this course, F, will be based on the final examination, E, and the average results for the non-mandatory assignments, A. All marks will be expressed on a scale of 0 to 10.</p> <p>For calculating A, the average of the three assignment results is used. Non-mandatory assignments that are not handed in or not handed in on time will have a score of 0. The results for the non-mandatory assignments will be valid only within the academic year in which these assignments have been made. Results for non-mandatory assignments obtained in previous academic years will not be taken into account.</p> <p>The final mark, F, for this course will be computed as follows: <math>F = E + [A \times (10 - E)/100]</math>. The computation will be carried out using one decimal and subsequently rounded to halves.</p> <p>In case of an insufficient final result, repair options may exist in accordance with Article 17A Times and number of examinations, sub 1, of the Teaching and Examination Regulations 2024-2025.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5).</p> |   |

| <b>Course Contents</b>                 | <p>This course will focus on understanding complete photovoltaic systems. It will start with general introduction to PV systems, overview of system components and their specifications. Several components will be explained in more detail such as power electronic converters and storage components. The different types of inverters, methods of maximal power point tracking and the overall efficiency of energy conversion of the system will be discussed. The applications of PV systems, such as off-grid, grid-connected, microgrids, PV systems with energy storage, will be presented. The course will focus on design of PV systems for different applications. The issues of connecting PV systems to the grid and the monitoring of PV system performance will be discussed.</p>                                                                                                                                                                                                                                           |   |
| <b>Study Goals</b>                     | <p>By the end of this course, you will be able to:</p> <ol style="list-style-type: none"> <li>1. Explain the purpose of the components in different PV Systems using trends in their physical quantities.</li> <li>2. Examine different power tracking methods and the importance of bypass diodes.</li> <li>3. Calculate the energy yield of a PV system in conjunction with the following steps: <ol style="list-style-type: none"> <li>3a. Employ the calculation for optimal PV panel orientation from geographical survey.</li> <li>3b. Determine the advantages and disadvantages of different PV systems topologies.</li> </ol> </li> <li>4. Design PV systems for different applications based on your own cost estimation and technical evaluation justified in a report</li> </ol>                                                                                                                                                                                                                                                |   |
| <b>Education Method</b>                | Lectures, self study and teaming up for carrying out the design of an actual PV System.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |

| <b>Assessment</b>                      | <p>For students of the 2024 cohort: Final project report (33% of the final mark) and written test (67% of the final mark).</p> <p>For students of previous cohorts: Final project report (25% of the final mark) and written test (75% of the final mark).</p> <p>Two-or-three-person teams will be formed at the first instruction. The grade of the final project report is per team, the grade of the written test is individual.</p> <p>To access to the written test, the grade of the final project report must be equal to or greater than 5.75.</p> <p>To pass the course, you need a grade of at least 5.75 in both parts (report and written exam) AND a final weighted grade of at least 5.75.</p> <p>In case of an insufficient final result, repair options may exist in accordance with Article 17A Times and number of examinations, sub 1, of the Teaching and Examination Regulations 2024-2025.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5).</p>  |   |

| <b>Expected prior knowledge</b>        | Basic knowledge on the first and second law of thermodynamics (a short introduction to this will also be provided during the lectures). Students who are missing this we explain the most important concepts again)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Summary</b>                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Course Contents</b>                 | <p>The course consists of the following content:</p> <ul style="list-style-type: none"> <li>-Introduction of thermodynamic cycles for heating and cooling. The working field of refrigeration and heat pumps;</li> <li>-Overview of the most important refrigeration / heat pumps systems: Mechanically driven heat systems, thermally driven systems, solid state systems and gas cycles. Comparison of these systems;</li> <li>-Components of refrigeration and heat pump cycles (compressors, valves, condensers, evaporators, turbines etc.);</li> <li>-analysis of cooling and heating cycles using the 1st and second law of thermodynamics, exergy analysis;</li> <li>-gas liquification;</li> <li>-techno-economic analysis of refrigeration and heat pump cycles;</li> <li>-Working fluids. Refrigerants for mechanical vapour compression; refrigerating machines: limits of application, evaluation of ODP and GWP;</li> <li>-Gas cycle refrigerating machines. Gas-phase cycles;</li> <li>-Magnetic refrigeration / heat pumping;</li> </ul>                                                                                                                                                                                                             |   |
| <b>Study Goals</b>                     | <p>By the end of this course, the students are able to:</p> <ul style="list-style-type: none"> <li>explain, reproduce and apply thermodynamic concepts in relation to refrigeration machines and heat pumps, considering their economic and environmental impact.</li> <li>recognize and apply the working principles, specific characteristics and application range of the most relevant methods to generate cooling and heating.</li> <li>explain and apply the concepts of gas liquefaction</li> <li>perform an energy and exergy analysis of refrigeration machines and heat pumps.</li> <li>evaluate the impact of the alternative concepts for refrigerating machines and heat pumps.</li> <li>sizing of heat pump and refrigeration equipment.</li> <li>perform techno-economic analysis of heat pumps and refrigeration systems.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Education Method</b>                | Lectures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Course Contents</b>                 | <p>This course is aimed at understanding the dynamics of buildings thermal behavior and at learning how to optimize their design and operation through thermal modeling, &amp; simulation. You will learn to solve problems like: how to shift or reduce peak heating demand to obtain a better match with a renewable energy system. What is thermally more efficient: a heavy concrete building or a light timber-frame building? How effective is night ventilation in warm periods? This course will provide you with answers to questions relating to dynamic thermal behavior in buildings. Amongst others you will learn about:</p> <ul style="list-style-type: none"> <li>- Energy chain from supply to demand and design steps</li> <li>- Basics of thermal comfort</li> <li>- Energy flows in buildings (transmission, ventilation &amp; infiltration, solar heat gains and internal heat gains)</li> <li>- Energy balance</li> <li>- Steady state simulations for peak load and energy usage estimates in pre-design (1 node energy balance model)</li> <li>- Transient simulation: The role of inertia in construction; setting up dynamic balance equations (Fourier equation), setting up a suitable RC network (multi-node energy balances); Solving the equations through finite difference and through transfer functions</li> </ul> <p>This is accompanied by many exercises to understand the optimization of building characteristics and peak shaving/shifting. The course ends up with an overview of energy conversion systems that can be used to supply the needed heating and cooling to buildings.</p> |   |
| <b>Study Goals</b>                     | <p>By the end of this course you will be able to:</p> <ul style="list-style-type: none"> <li>- explain how the heating and cooling needs of a building are determined by diverse building design parameters, weather, occupancy and comfort preferences of occupants.</li> <li>- translate this knowledge into design calculations (using steady state and transient balances) to optimize the energy demand towards zero energy buildings, to size the heating and cooling equipment, and to provide a good indoor thermal comfort.</li> </ul> <p>More specifically, you will be able to:</p> <ul style="list-style-type: none"> <li>- derive the mathematical equations describing the thermal performance of the various building components.</li> <li>- combine these equations to simulate the whole building system.</li> <li>- use dynamic simulations to answer questions about the optimal energy design, heating and cooling capacities, energy use, comfort.</li> <li>- translate the fuzzy term "comfort" into design requirements</li> <li>- simulate how thermostat control allows for peak shaving and shifting.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Education Method</b>                | <p>The course is built around a case study that runs like a common thread between the different course items. The case study is a self-paced individual assignment divided into 4 parts, that are discussed during workshops.</p> <p>Type of contact: Lectures, videos, guided exercises, 3 workshops and excursion. Sometimes we flip the classroom.</p> <p>Number of contact hours/week: 4</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Assessment</b>                      | <p>Formative assessment: 4 assignments with answers for self-study. Each of the assignments is discussed during workshops sessions of 2 hours.</p> <p>Summative assessment: Written exam (50% of grade) + Midterm quiz (50% of grade). The midterm quiz relates closely to the formative assignments.</p> <p>An average grade of 6 (rounded to the nearest 0.5) AND a minimal grade of 5 for the written exam are required to pass.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Course Contents</b>                 | <p>There are several technologies which can obtain heat or cool from the local environment, which are called ambient temperature sources. In this course, you will learn the process of design for ambient or near ambient temperature sources. Typically, air source systems are more variable and less efficient and less easy to operate, but easily accessible, while the shallow subsurface offers a more stable and efficient source, but less easy to access. Water sources are in between. In this course you will learn which pros and cons prevail under various conditions and how you can make an efficient design for either type.</p> <p>You will investigate two different technologies in depth, and encounter several key design aspects including:<br/> Field data collection: Undertake the design and go to the field to measure important quantities that inform the design (based on a location)<br/> Quantification of heat transfer processes<br/> Technology sizing and integration<br/> Identify key modes of operation<br/> Predicted performance</p> <p>Remark: Heat pump is applied. Only basic energy flows. No details on HP itself</p> |   |
| <b>Study Goals</b>                     | <p>By the end of this course you are able to:<br/> design a H&amp;C system with a near ambient temperature H&amp;C source.<br/> evaluate design suitability to be a significant contributor to the energy needs and year-round energy flows: hydraulic connections and various modes of operation.<br/> This requires the integration of various sub technologies which you will also learn to design and quantify:<br/> Borehole Heat Exchanger (BHE), including non-stationary conduction and interference.<br/> Aquathermal: Utilisation of heat from urban water infrastructure: surface, sewerage and drinking water. This includes surveying of field conditions to inform the design process [including data collection in the field].<br/> Other sources of thermal energy: air, asphalt.<br/> Integration with Heat pump and storage facilities.<br/> Design sizing / system capacity.</p>                                                                                                                                                                                                                                                                    |   |

| <b>Course Contents</b>                 | <p>The course provides an overview of sources for heating and cooling, their characteristics, and their role in the energy mix. You will learn to quantify available heating and cooling capacities based on local conditions. The following sources are covered:</p> <ul style="list-style-type: none"> <li>· Solar thermal</li> <li>· Borehole Heat Exchangers</li> <li>· Geothermal</li> <li>· Waste Heat: data centres, industry, cooling demand)</li> <li>· Aquathermal and other environmental sources</li> </ul>                                                                                                                                                                                                                             |   |
| <b>Study Goals</b>                     | <p>By the end of this course you will be able to:</p> <ul style="list-style-type: none"> <li>· classify &amp; contrast available H&amp;C sources</li> <li>· calculate available capacities of heat sources depending on local conditions</li> <li>· establish (heating/cooling) supply profile</li> <li>· build a conceptual, connected model of heating and cooling sources</li> <li>· quantify the heat transport process in H&amp;C sources</li> </ul>                                                                                                                                                                                                                                                                                           |   |
| <b>Education Method</b>                | <p>Lecture (hybrid)<br/>Group work: case study</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |

| <b>Expected prior knowledge</b>        | ME45111SET or equivalent (knowledge about Heating and Cooling demand of Buildings)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |
| <b>Course Contents</b>                 | <p>In this course you will learn how to decide on efficient combinations of energy conversion systems accounting for available heat sources, and how to distribute and control air and energy flows in buildings whilst minimizing carbon emissions and optimizing thermal comfort. To do this, you will learn about:</p> <ul style="list-style-type: none"> <li>- Rational no regret use of heat sources in relation to acceptable temperature levels in buildings &amp; neighbourhoods, depending on buildings insulation standard</li> <li>- Relationship between building systems and large-scale outdoor systems (like ATES or geothermal)</li> <li>- Air handling systems and properties of Humid air. Humidification/de-humidification, and related energy use</li> <li>- Distribution of heat/cold by air systems and low/high temperature</li> <li>- Distribution of heat/cold by hydronic systems and low/high temperature</li> <li>- Distribution of heat/cold by mixed systems</li> <li>- Room emitters and thermal comfort</li> <li>- Basics of control in HVAC systems</li> <li>- Thermal buffers and zoning</li> <li>- Designing a complete renewable-based energy systems for a a building (energy demand, energy supply, distribution)</li> <li>- Example of a complex building including heat pump, ATES, solar collectors, PV, free air cooling and distribution to multiple rooms</li> </ul> |   |
| <b>Study Goals</b>                     | <p>By the end of the course you will be able to:</p> <ul style="list-style-type: none"> <li>- Make substantiated no-regret choices of heat sources to be used in cities and buildings, depending on geographic availability (supply), acceptable temperature levels in the buildings under consideration (demand), and principles relating to rational use of energy sources.</li> <li>- Describe the different ways to distribute heat and cold in buildings, either through air systems or through hydronic (water) systems and their advantages and disadvantages.</li> <li>- Create zones with similar suitable temperature levels compatible with heat sources, distribution and room emitters, accounting for health &amp; comfort and use of renewables.</li> <li>- Engineer required capacity for, and distribution to the zones present in building.</li> <li>- Make a basic design for control engineering and thermal buffering in HVAC systems (Heating, Ventilation and Air Conditioning systems).</li> <li>- Make a complete renewable-based energy design of a building, including an ATES system, at the level of preliminary design</li> </ul>                                                                                                                                                                                                                                                  |   |
| <b>Education Method</b>                | Lectures, workshops, exercises, 2 weeks group work on integration of systems, excursion                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Assessment</b>                      | <p>Formative assessment: a series of short assignments with answers for self-study.</p> <p>Summative assessment: Midterm online exam (75% of grade) and groupwork on integrated design, assessed by short report and presentation (25% of grade). The midterm exam relates closely to the formative assignments.</p> <p>An average grade of 6 (rounded to the nearest 0.5) AND a minimal grade of 5 for the midterm quiz are required to pass.</p> <p>Resit/ Repair opportunities:<br/>In case of an insufficient final result, repair options may exist in accordance with Article 17A Times and number of examinations, sub 1, of the Teaching and Examination Regulations 2024-2025, for:</p> <ul style="list-style-type: none"> <li>- Online midterm quiz: written resit</li> <li>- Group project: resubmit report</li> </ul> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |

| SET3995                                 | Direct Use of Geothermal Energy                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 4 |

| <b>Course Contents</b>                  | <p>Scope: Due to the growing interest in sustainable energy production, this course presents the fundamentals of geothermal resource exploitation. Students will gain a general understanding of what a geothermal resource is and of the basic steps in their economic exploitation, including lifetime analysis, characterization of a geothermal reservoir, reservoir engineering and system design, basics of the operation and maintenance of geothermal systems, and geothermal field management, as well as some environmental aspects.</p> <p>Contents:</p> <ul style="list-style-type: none"> <li>- Introduction to geothermal energy</li> <li>- Geology and geomechanics</li> <li>- Reservoir characterization</li> <li>- Design of a geothermal system</li> <li>- Geothermal reservoir engineering</li> <li>- Numerical modeling of geothermal doublets</li> <li>- Techno-economic assessment of geothermal systems</li> </ul>                                                                                               |   |
| <b>Study Goals</b>                      | <p>After successfully completing this course you will be able to:</p> <ul style="list-style-type: none"> <li>Classify geothermal systems based on their different geological settings</li> <li>Describe and apply geomechanical principles related to geothermal systems</li> <li>Describe solute and heat transfer in porous media by mathematical equations and explain their role in different geothermal systems (Darcy flow, conductive and convective heat transfer, diffusion and advection equations)</li> <li>Develop a 2D and 3D Finite Element (FE) model in COMSOL describing a direct use geothermal system by implementing real world data</li> <li>Design a prototype geothermal system: <ul style="list-style-type: none"> <li>-Choose the appropriate location and well configuration</li> <li>-Assess the system lifetime, power, generated energy and stochastic economic output</li> <li>-Justify your geothermal development choices from an energy, engineering and economic point of view</li> </ul> </li> </ul> |   |
| <b>Education Method</b>                 | <ul style="list-style-type: none"> <li>- Lectures</li> <li>- Computer practicals</li> <li>- own study</li> <li>- group work</li> <li>- excursion (half day) (depending on class size and operator availability)</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |

| <b>Course Contents</b>                 | <p>Multiphase reactor types: Fixed beds, trickle beds, fluidized beds, bubble columns, slurry reactors, microreactors, structured (monolith) reactors, electrocatalytic reactors.</p> <p>Engineering aspects: Flow regimes, mass transfer, conversion models. Hatta number, reaction enhancement. Residence time distribution. Catalytic reactors structured in time and space. Unifying concepts.</p> <p>Design aspects: reactor selection, decoupling of kinetics and transport phenomena, combination of reaction and separation, reaction coupling, separating catalytic steps, controlled energy input, circularity of materials.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Study Goals</b>                     | <ol style="list-style-type: none"> <li>1. The student is able to describe for each of the archetypes of multiphase reactors, the various embodiments with practical relevance.</li> <li>2. The student is able to use the scientific literature to find relevant information for the various reactor types.</li> <li>3. The student is able to analyse a multiphase reactor and to describe the physical and chemical process steps in words.</li> <li>4. The student is able to explain the basic measurement techniques used in studying multiphase reactors.</li> <li>5. The student is able to write down the mass, energy, and momentum balances for the overall system and the steps identified under objective 3.</li> <li>6. The student is able to implement customary models in the balances mentioned under 5, such that a system of equations describing the reactor is obtained.</li> <li>7. The student is able to simplify the system of equations based on a quantitative analysis and identification the rate-determining steps.</li> <li>8. The student is able to use Python to solve the systems of equations numerically for the basic types of reactors.</li> <li>9. The student is able to use the developed models to analyse defined cases.</li> <li>10. The student is able to present, both orally and in writing, the outcomes of modeling, calculations, and evaluation.</li> </ol> |   |
| <b>Education Method</b>                | <p>Each lecture will give a short overview of a specific multiphase reactor type (only 45 minutes). The slides available on Brightspace. You will get references to papers and/or chapters from textbooks that give more information about the reactor type. These will be made available via Brightspace.</p> <p>After the lecture, an assignment (about 8 hours work) will be available via Brightspace for the specific reactor type treated. These assignments are made in teams of four students; this number may be changed depending on the number of participants. You are free to choose which software package you want to use for making the assignments, but Python is recommended.</p> <p>After two weeks, each team hands in a detailed solution of the problem on paper the day before the discussion before the announced deadline. Moreover, each team prepares a summary of the solution for presentation in PowerPoint. Please bring this presentation on a memory stick. Each week, a few teams present their solution; the instructors choose the student that is presenting. The other teams challenge this solution.</p>                                                                                                                                                                                                                                                                  |   |
| <b>Computer Use</b>                    | In this course we use Python.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Literature and Study Materials</b>  | All material is provided via Brightspace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Assessment</b>                      | <p>The final grade consists of:</p> <ul style="list-style-type: none"> <li>* the solution to the assignments</li> <li>* an individual part; the nature of this part will depend on the number of participants</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |

| <b>Course Contents</b>                 | <p>This course provides the fundamentals for conceptually designing processes of chemical and energy conversion plants, where basic unit operations such as reactions, energy conversion, heat and mass transfer, separations, etc. are designed, modeled and optimized.</p> <p>The conceptual process design involves the design of the flow sheet, creating the topology of the process by the optimizing the sequence of reactors, separation units and energy conversion systems to achieve the required product specification in a sustainable and economically feasible way.</p> <p>In the course the students learn how to select, sequence and model the different unit operations as well as the selection and rough sizing of the required equipment. In addition the students will learn how to integrate the different units into a process flow sheet, and how to model, optimize and rank of the different design alternatives.</p> <p>During the course the students get a hands-on experience with modern process design tools (a.o. Aspen Plus), which will be used in a larger assignment in which a conceptual design of a sustainable, and (if possible) economically feasible process will be setup and simulated.</p> <p>The course includes the following elements:</p> <ul style="list-style-type: none"> <li>Intro; context and scope of conceptual process design;</li> <li>Modelling the thermodynamics of mixtures</li> <li>Modelling of key unit operations</li> <li>Hierarchical approach (Douglas method) to conceptual process design <ul style="list-style-type: none"> <li>o reaction and separation systems</li> <li>o homogeneous systems</li> <li>o heterogeneous systems</li> <li>o steam power plant system</li> </ul> </li> <li>Simulation and optimization</li> <li>Superstructures</li> <li>Costing and project evaluation</li> <li>Safety, Health and Environmental impact considerations</li> <li>Flow-sheet design using Aspen</li> <li>Presentation (pre-recorded) of the case studies</li> </ul> |   |
| <b>Study Goals</b>                     | <p>The student can conceptually design and optimize chemical process plants.</p> <p>More specifically, the student must be able to:</p> <ol style="list-style-type: none"> <li>1. describe the context and scope of a conceptual design of a chemical plant,</li> <li>2. model and design the most important unit operations of chemical/energy conversion process plants,</li> <li>3. make a conceptual process design using the hierarchical Douglas approach for process design</li> <li>4. select, sequence and model the different unit operations in the flowsheet of a chemical process plant and determine the main dimensions of the required reaction/separation equipment,</li> <li>5. apply process flowsheeting tools for the design and simulation of process flowsheets for a chemical plant including the recycle streams</li> <li>6. Use the process simulation tools to evaluate, optimize and rank the different design alternatives for a process.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |
| <b>Education Method</b>                | Lectures (plenary and working), assignments, pre-recorded presentations and oral examination                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Literature and Study Materials</b>  | <p>Lecture slides</p> <p>Book (selected chapters): Robin Smith<br/>Chemical Process Design and<br/>John Wiley &amp; Sons, U.S.A. (either first or second edition)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Assessment</b>                      | The examination will be as follows: Oral exam [50%, must be 6 or higher] + one presentation of the block scheme prerecorded [10%] and one final report on the process design [32%] and a presentation about it (prerecorded) [8%]. In case of unforeseen circumstances or measures resulting from COVID-19, the prescribed assessment will be: exactly the same. The assessment is Covid-19 independent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Enrolment / Application</b>         | <p>Registration:<br/>To participate in this course, registration via MyTUDelft is not needed.<br/>More information regarding registration for courses, the procedure, and current deadlines can be found on <a href="https://www.tudelft.nl/en/student/me-student-portal/education/related/registration-courses-and-examinations/courses">https://www.tudelft.nl/en/student/me-student-portal/education/related/registration-courses-and-examinations/courses</a>.</p> <p>To participate in midterms and endterms, (timely) registration for exams is obligatory. More information regarding registration for exams, the procedure, and current deadlines can be found on <a href="https://www.tudelft.nl/en/student/education/courses-and-examinations/examinations/registration-for-exams">https://www.tudelft.nl/en/student/education/courses-and-examinations/examinations/registration-for-exams</a>.</p> <p>*in some cases, there are entry requirements or additional criteria to be admissible to a course. These can be found in the OER/TER of the programme, <a href="https://www.tudelft.nl/en/student/me-student-portal/education/related/regulations">https://www.tudelft.nl/en/student/me-student-portal/education/related/regulations</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |

| <b>Course Language</b>                  | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Summary</b>                          | The course covers basic principles and methods required for the design and selection of heat and mass transfer equipment (for instance heat exchangers and thermal separation processes). This allows for the integration of heat & mass transfer principles to design process equipment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Course Contents</b>                  | <p>Thermal energy can be converted or stored. Heat exchangers are needed in either case.</p> <p>This course will cover:</p> <ul style="list-style-type: none"> <li>Fundamentals of heat &amp; mass transfer,</li> <li>Design of different types of heat exchangers (shell and tube, plate, finned tubes ), regenerators/recuperators, cooling towers, and furnaces,</li> <li>Fouling of heat exchanger surfaces,</li> <li>characteristics of equipment for various separation processes</li> <li>the role of mass transfer in the sizing and design of the separation equipment.</li> <li>Cost Analysis,</li> <li>Pinch Technology</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Study Goals</b>                      | <p>By the end of this course, youd be able to design and rate heat &amp; mass transfer equipment. This can help you, for instance, to:</p> <ul style="list-style-type: none"> <li>- Quantify heating and cooling processes and requirements in various industrial applications such as: metallurgy, waste processes, food, agriculture, desalinization, freeze-drying.</li> <li>- Explain design requirements for different industrial heating and cooling processes.</li> <li>- Analyze existing industrial heating and cooling processes.</li> <li>- Identify decarbonization solutions for existing industrial heating and cooling processes.</li> <li>- Design suitable components/facilities/technologies for industrial heating and cooling processes.</li> <li>- Can describe and formulate thermodynamics equations and models for the selection and design of thermal separation processes.</li> <li>- Comprehends the role of heat and mass transfer in the dimensioning of equipment for separation processes.</li> </ul>                                                                                              |   |
| <b>Education Method</b>                 | Lectures, assignments, self-study, team work, tutorials                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |

| <b>Expected prior knowledge</b>        | To start this course you need to have a good knowledge of BSc. level algebra and calculus, thermodynamics, chemistry, kinetics, basic reactor modelling (batch, plug flow, continuously well stirred reactor), basic process engineering (mass, energy, momentum balances), and physical transport phenomena. In case you think you miss some of this pre-existing knowledge, please perform selfstudy of the first six chapters of the book 'Biomass as a Sustainable Energy Source for the Future', Wiley (2015), eds. De Jong and Van Ommen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Summary</b>                         | Biomass is available in abundance on a global level; it is naturally stored solar energy in a wide diversity of chemical structures. Biomass is a renewable resource for heat, electricity, liquid fuels, chemicals and materials. Among the renewable energy sources, biomass can be stored most easily, however it is contingent on the resources characteristics. Due to the heterogeneous nature of biomass, several conversion technologies have been developed in the context of energy conversion chains, with combustion being the oldest performed by mankind. This course deals with the background, design and implementation of different technologies to thermochemically convert biomass into valuable products.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Course Contents</b>                 | In this course you will learn about the following aspects of biomass conversion based on thermo-chemical conversion technologies.<br><br><ul style="list-style-type: none"> <li>- Biomass Characterisation (biomass types, properties, analyses)</li> <li>- Pretreatment (harvesting, size reduction, drying, torrefaction)</li> <li>- Thermochemical conversion (combustion, gasification and pyrolysis; reactor types)</li> <li>- Transportation fuels / biorefinery (syngas conversion, economics)</li> <li>- Process design (structured design approach)</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |
| <b>Study Goals</b>                     | During this course, the students will gain knowledge of and insight into energy conversion technologies based on biomass thermo-chemical conversion processes for a wide range of applications, such as supply of electricity, heat and fuels. They will be provided with practical problems to solve and projects to perform in this field.<br><br>These main learning objectives can be broken down into several smaller learning objectives: <ol style="list-style-type: none"> <li>1) The student has knowledge on the typical biomass composition, related properties (like e.g. heating value, ash melting behaviour) and can critically identify and select fuel characterization techniques.</li> <li>2) The student is able to identify and perform basic capacity calculations related to thermo-chemical biomass conversion systems for small and larger scale (combined) heat and power generation, as well as systems for producing transportation fuel.</li> <li>3) The student is able to set up reaction equations (stoichiometry) for a wide range of energy supply related fuel conversion processes.</li> <li>4) The student can set up and perform heat and mass balance calculations regarding single phase and simple multi-phase biomass thermo-chemical conversion reactors and extended (downstream) systems for power, heat and fuels generation.</li> <li>5) The student knows how to perform basic ideal gas phase chemical reaction equilibrium calculations to calculate product compositions and extents of reactions given initial reaction mixture composition, pressure and temperature.</li> <li>6) The student can understand and describe reaction kinetic expressions and also apply them in order to solve (design) problems related to the conversion of fuels and the formation of emission components.</li> <li>7) The student demonstrates good knowledge of mass and heat transfer mechanisms and phenomena applied to the chemical conversion of both liquid and solid biomass (derived) fuels.</li> <li>8) The student can derive equations for idealised model reactors (well-stirred reactor and plug flow reactor concepts) and apply these simplified reactor concepts to solve engineering problems related to the thermo-chemical conversion of biomass fuels, in particular combustion, gasification, pyrolysis and hydrothermal liquefaction.</li> <li>9) The student is able to perform calculations concerning the conversion of small particles; important in this respect is the identification of the regime of conversion. Related dimensionless numbers such as the Thiele Modulus and the Biot number are key indicators in this respect.</li> <li>10) The student is able to understand the basics of thermo-chemical conversion processes and to translate this into designing and evaluating such (sometimes hybrid) systems, including their economic evaluation based on characteristic parameters like NPV, POT, and ROI.</li> <li>11) The student demonstrates good communication skills, both oral and written, concerning presentation of (applied) scientific results.</li> </ol> |   |
| <b>Education Method</b>                | This course consists of six 2-hour lectures, also using blended learning methods. Each lecture is followed by a 2-hour work session or excursion(s)/lab visit(s) in the same week. These sessions are focused on working out minor assignments including literature surveys, problem solving and working on the major assignment project. During the week of exams, you will present the results of the major assignment project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Course Relations</b>                | This course is a core course in the Waste & Combined Heat and Power profile.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Literature and Study Materials</b>  | Book: "Biomass, a sustainable energy source for the future", de Jong and van Ommen, Wiley., 1st edition, Wiley (2015).<br>Lecture slides                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Assessment</b>                      | The final grade of the course consists of the following components:<br>* the solution to the (up to three) minor assignments (team work) (40%)<br>* a larger final assignment (team work); (50%)<br>* evaluation of the final assignment's presentation; (10%)<br><br>Final grade calculation: $(0.4 * \text{minor group assignments}) + (0.5 * \text{larger group assignment}) + (0.1 * \text{presentation})$<br><br>Resit/ Repair opportunities:<br><br>In case of an insufficient final result, repair options may exist in accordance with Article 17A Times and number of examinations, sub 1, of the Teaching and Examination Regulations 2024-2025, for:<br>* minor assignments: submit 1 new minor assignment<br>* larger assignment: resubmit report<br>* Presentation: resit (new presentation)<br><br>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Course Contents</b>                 | <p>Due to temporal mismatch in availability and demand for heat, heat storage is needed. In this course you will learn that the need for storage is determined by the variations and mismatches in demand and supply profiles. Also, Power to heat is enabled by heat storage. Depending on the required storage requirements (volume, cycle length, temperature level) you will learn to design a heat storage system and quantify heat losses. The heat storage technologies covered in this course are:</p> <ul style="list-style-type: none"> <li>-Sensible heat storage: subsurface, pits, tanks</li> <li>-Latent heat storage: Phase change materials</li> </ul> <p>Because heat storage systems enable the use of heat sources, but are no heat sources themselves, the economics of heat storage is often complex. Therefore, the integration of heat storage in business cases is also covered in this course.</p>                                                                                                                      |   |
| <b>Study Goals</b>                     | <p>After taking this course you are able to:</p> <ul style="list-style-type: none"> <li>Assess the need for heat storage.</li> <li>Identify storage requirements for various supply-demand conditions.</li> <li>Select appropriate storage media for different conditions.</li> <li>Quantify and calculate heat convection, conduction and phase change heat transfer in various heat storage systems.</li> <li>Make a basic design and business case for different heat storage technologies, LCOE.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Expected prior knowledge</b>        | <p>Prior knowledge of algebra and calculus is required. In general, the typical master student in a STEM subject has mathematical competencies that exceed those required for this course.</p> <p>The course builds on some of the ideas covered in the SET course Economics and Regulations of Sustainable Energy Systems in Q1, especially the parts taught by Gideon Ndubuisi and Servaas Storm. We will review some of these ideas, but in general non-SET students will have to catch up.</p>                                                                                                                                                                                                                                                                              |   |
| <b>Course Contents</b>                 | <p>Why do markets create environmental problems? How and when can markets be harnessed to solve environmental problems? Are there environmental limits to economic growth? What should governments do to speed up the energy transition and fight the global climate crisis?</p> <p>This is a course in environmental and ecological economics designed for master students with little background in economics. It introduces students to key economic concepts and theories with respect to:</p> <ul style="list-style-type: none"> <li>- consumption and production</li> <li>- efficiency and welfare</li> <li>- economic growth and sustainability</li> <li>- the choice of environmental policy targets and instruments</li> <li>- integrated assessment models</li> </ul> |   |
| <b>Study Goals</b>                     | <p>After completing the course, students should be able to:</p> <ul style="list-style-type: none"> <li>- explain the main theoretical concepts used in environmental economics and how they relate to one another</li> <li>- explain how a market economy undervalues the environment</li> <li>- explain how environmental economists value the environment</li> <li>- apply economic theory to environmental problems such as climate change</li> <li>- evaluate economic policies for solving environmental problems such as climate change</li> </ul>                                                                                                                                                                                                                        |   |
| <b>Education Method</b>                | Classes, quizzes, and exercises.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Literature and Study Materials</b>  | <p>The main text is:</p> <ul style="list-style-type: none"> <li>- Harris &amp; Roach (2021) Environmental and Natural Resource Economics: A Contemporary Approach (5th ed.), Taylor &amp; Francis.</li> </ul> <p>The course goes beyond the textbook and covers selected topics in more depth, on the presumption that master students have learned how to learn and thus they can learn fast. Additional materials will be posted on Brightspace.</p>                                                                                                                                                                                                                                                                                                                          |   |
| <b>Assessment</b>                      | <p>The final grade is based exclusively on the performance in the final exam.</p> <p>In normal circumstances the assessment is based on a closed-book computer exam on campus, which includes multiple-choice questions. In case of unforeseen circumstances or due to measures resulting from COVID-19, the assessment will be based on an open-book exam.</p>                                                                                                                                                                                                                                                                                                                                                                                                                 |   |

| TPM0931SET                             | Sustainable Energy Innovation and Transitions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 4 |

| <b>Course Contents</b>                 | <p>This course deals with transitions towards sustainability and with theoretical frameworks and strategies for analysing and influencing such transitions. The theoretical frameworks and strategies taught in this course are Strategic Niche Management (SNM), Functions of Innovation Systems (FIS), the Multilevel Perspective, Backcasting and Transition Management. The course focuses on niches around sustainable innovations at the sectoral level as part of larger transitions at the (inter)national level. Since the course is part of the SET program, the lectures and papers focus in particular on sustainable energy innovations and the sustainable energy transition.</p> <p>This course is the first course in the SET Economics &amp; Society profile. It can also be followed by other MSc students as an elective. Due to overlap, is not allowed to follow this course if you have already followed course TPM033A or 4413TRIG.</p>                                                                                                                                                                                                                                                                                    |   |
| <b>Study Goals</b>                     | <p>After this course, the student:</p> <ol style="list-style-type: none"> <li>1. has knowledge of: <ul style="list-style-type: none"> <li>* the most relevant innovation theories to analyse transitions towards sustainability: functions of innovation systems, strategic niche management, transition theory and the multilevel perspective.</li> <li>* the key characteristics of the strategies strategic niche management, backcasting and transition management, which can be applied to explore and facilitate transitions towards sustainability.</li> </ul> </li> <li>2. has insight in: <ul style="list-style-type: none"> <li>* the opportunities, limitations, strengths and weaknesses of the intervention strategies and the innovation theories and concepts.</li> </ul> </li> <li>3. has experience and basic skills in: <ul style="list-style-type: none"> <li>* exploring and evaluating niche developments and innovation processes which aim to contribute to the sustainable energy transition.</li> <li>* formulating research questions.</li> <li>* writing a coherent, well-structured and well argued academic report.</li> <li>* critically reflecting on work of others and on their own work.</li> </ul> </li> </ol> |   |
| <b>Education Method</b>                | <p>This course consists of lectures, homework assignments and a project assignment consisting of group work and individual work. In the project assignment student groups analyse a self-chosen sustainable energy niche. The technology in the niche must have the potential to radically change the energy sector and must be in the phase of first introduction the niche phase. The aim of the analysis is to assess the current status of the niche in question, identify bottlenecks and opportunities, and propose a strategy for enabling further growth of the niche.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Literature and Study Materials</b>  | <p>Scientific articles which are made available via the TU library or via Brightspace.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Assessment</b>                      | <p>Students are evaluated based on the group report (75% of the final grade) and on the individual assignment report (25% of the final grade). Both reports must be completed with at least grade 5.0. Furthermore, students have to deliver weekly homework assignments and participate actively in the lectures. All marks will be expressed on a scale of 1 to 10.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |

| <b>Expected prior knowledge</b>        | No specific knowledge is required prior to entering the course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Course Contents</b>                 | <p>This course is aimed at high-tech entrepreneurs who have great ideas which they like to implement in established organizations, through intrapreneurship or corporate venturing, or use to start and grow themselves new companies. The course is specifically focused on the business opportunities related to new energy technologies. New, emerging, sometimes radically different energy technologies provide significant opportunities for alternative products and services, new business models and new ways of working for more efficient approaches to resource exploitation and energy production and consumption. Yet to harness these opportunities, it often requires to abandon existing paradigms and search in landscapes more distant from current ones. Entrepreneurial activity is a key driver here and the need to develop the skills to develop and act on innovative business opportunities is increasingly vital. By using evidence-based content, methods, and models this course guides you in the analyses of new venture opportunities by assessing and investigating the commercial potential of implementing new technologies either from a social challenge or technology perspective. Opportunity recognition, product-service innovation, sustainable business modelling, and new venture growth dynamics in the context of networks of established firms and the wider stakeholders are core elements of this course.</p> <p>This course is the third course in the SET Economics &amp; Society profile.</p>                                                                                                                                                                                                                                                                                               |   |
| <b>Study Goals</b>                     | <p>Our goal is to demystify the new venture process, and to help you build the skills to identify and act on innovative opportunities now, and in the future. Upon finishing the course you will be able to:</p> <ol style="list-style-type: none"> <li>1. understand how entrepreneurial ideas in the energy sector are shaped and what influences the development of them into viable sustainable business opportunities in the context of both start-ups and corporate venturing;</li> <li>2. understand the role of the innovation process, how it depends on the technology and institutional context and be able to apply the generic pattern of development and diffusion for radically new high-tech products or systems;</li> <li>3. understand the principles of market segmentation, and apply different niche-strategies to commercialize radical new high-tech products;</li> <li>4. understand and apply various methods for developing sustainable/ circular business models for the creation of successful new ventures or innovate existing business models and transform them into desired ones;</li> <li>5. Understand different circular economy barriers and strategies, and apply different circular strategies to make business models more circular;</li> <li>6. understand the growth stages of new ventures and the role of network-based facilitators, the networks of established firms in the energy sector and the role of stakeholder management.</li> </ol>                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Education Method</b>                | The course is organized into 8 sessions (8 weeks) into 3 learning blocks with an assessment at the end of each. Each session consists of a mixture of lecturing, and discussions of cases, literature and assignments, and presentations. Assignments provide you with opportunities to integrate and apply learnings from each learning block.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |

New York, USA</p> <p>Journal articles: Will be posted on Brightspace-site.<br/>Slides presented in class: Will be posted on Brightspace-site.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Assessment</b>                      | <p>The assessment is composed of several elements:</p> <ol style="list-style-type: none"> <li>1. Active participation during the lectures and learning block assignments. You will be assessed based on the active participation, completing assigned readings, and on time assignment submission of each learning blocks. This will account for the 30% of the final grade.</li> <li>2. Group report and final presentation. Proposed group assignment. This consists of two parts. The first part is about analysing the business model of a start-up, identify how the business model works and reflect on it by the literature and come with suggestion to improve or adapt it to new technological opportunities. Then the second part is to identify an established firm in the energy sector that is related to the field of the start-up and analyse for this established firm what the corporate venturing activities are that they have to support new innovations either through internal venturing or by acquiring external ventures. Then analyse how the start-up could contribute to the large firm in terms of making strategic or operational transitions into new energy systems and vice versa what the benefits are for the start-up to become a venture within the established firm. Students will present and submit a final report and will be judged on their ability to understand both theoretical and practical aspects of bringing a technology to the market, and to analyse energy-related business challenges and opportunities in the field of entrepreneurship and innovation. The group grade will be adjusted for individual participation. This will account for the 40% of the final grade.</li> <li>3. Individual: Theory quizzes (30%)</li> </ol> <p>All marks will be expressed on a scale of 1-10.</p> |   |
| <b>Enrolment / Application</b>         | All students across the various faculties of the Delft University of Technology can take this course by directly enrolling into Brightspace. No other means of registration, such as the app MyTuDelft are needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |

| <b>Summary</b>                         | <p>The energy system transition towards a sustainable, low carbon future is led by decarbonisation, decentralisation, and digitalisation. Power grids are undergoing a fast-paced process of digitalisation for enhanced monitoring and control capabilities and grid intelligence. However, the increased integration of digital technologies, such as the next generation of Operational Technologies (OTs) and digital substations, implies a new risk as Information Technology (IT) OT systems for smart grids are vulnerable to cyber attacks. Furthermore, the combination of heterogeneous, co-existing smart and legacy technologies generates significant vulnerabilities and cyber security challenges. Examples of cyber security incidents related to power grids already exist around the world. On December 23, 2015 cyber attacks were conducted on the power grid in Ukraine that resulted in power outages, which affected 225,000 customers. More sophisticated cyber attacks on the Ukrainian power grid followed on December 17, 2016 resulting in a power outage in the distribution network where 200 MW of load was unsupplied. The complexity of cyber attacks on power systems is on the rise. They can initiate cascading failures and result in a catastrophic blackout. A power outage can disrupt the entire energy chain including water supply, heating, and gas networks. Without power, hospitals and other critical services are severely affected. A disruption of service may lead to financial loss, damages, chaos, or even a loss of lives. With respect to security of supply and reliability of the future energy system provision, special attention is needed for new vulnerabilities and cyber threats that come with digitalisation. Accordingly, the cyber security aspects are critical for a further power grid digitalisation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Course Contents</b>                 | <p>This course aims to assess and improve the cyber security of smart grids. It discusses the stakeholders of and complexities in critical infrastructures such as electrical power systems. It analyses the typical IT-OT system architectures for grid monitoring and control and explains the main cyber security concepts and policies. The course provides essential knowledge to analyse cyber security threats, threat vectors, and vulnerabilities of IT OT systems for power grids. It examines the kill chain stages of the cyber attack process on industrial control systems. The course analyses the impact of cyber attacks on power system operation in terms of loss of load, equipment damage, cascading effects, and risk of a blackout. The course studies the state-of-the-art security controls and best practices for threat intelligence management and incident response to defend against cyber attacks and effectively mitigate their impact on power system operation.</p> <p>This course focuses on cyber security of Information Technology (IT) Operational Technologies (OT) networks used for power system operation. It starts with an overview of the smart grid and its industrial control systems (EMS/SCADA) and introduces computer networks and cyber security. Next, the course will introduce the cyber kill chain method for cyber security investigation and intelligence-driven defence. Kill chains are used to understand, anticipate, recognise, and combat cyber attacks and advanced persistent threats. The course uses the kill chains of the 2015/2016 cyber attacks on Ukrainian power grid as real-world study cases throughout the course. The main IT-OT system vulnerabilities and cyber threats are analysed. The course covers threats such as passive and active reconnaissance, social engineering, and malware. It investigates various threat vectors on host and network security and advanced cyber attacks targeting power grids. The impact on power system operation is analysed. The course discusses the state-of-the-art security controls to defend and mitigate cyber attacks on power grids such as access controls, authentication management, cryptography, firewalls, secure communication protocols, network segmentation, and intrusion detection and prevention systems. The best practices to improve power grid resilience to cyber attacks are discussed, i.e., threat intelligence management, incident response, and wide area monitoring, protection and control. This course provides a deep dive into core cyber security concepts for power grids such as cryptography (symmetric and asymmetric encryption), hash functions, digital signatures, and cyber-physical anomaly detection using machine learning techniques. Cyber security demonstrations on power grids will be conducted for students in Control Room of the Future (CRoF) technology centre.</p> |   |
| <b>Study Goals</b>                     | <p>At the end of the course, you will be able to:</p> <p>LO1: Analyse cyber security threats, threat vectors, and vulnerabilities of Information Technology (IT) and Operational Technology (OT) systems used for power grid monitoring and control.<br/> LO2: Examine kill chain stages of the cyber attack process on cyber-physical power systems.<br/> LO3: Analyse the impact of cyber attacks on power system operation (instability, cascading failures and blackout).<br/> LO4: Develop security controls using machine learning to detect, prevent and mitigate cyber attacks and cyber secure the future power grids.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |

| <b>Expected prior knowledge</b>        | Basic knowledge on the first and second law of thermodynamics (a short introduction to this will also be provided during the lectures). Students who are missing this we explain the most important concepts again)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Summary</b>                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Course Contents</b>                 | <p>The course consists of the following content:</p> <ul style="list-style-type: none"> <li>-Introduction of thermodynamic cycles for heating and cooling. The working field of refrigeration and heat pumps;</li> <li>-Overview of the most important refrigeration / heat pumps systems: Mechanically driven heat systems, thermally driven systems, solid state systems and gas cycles. Comparison of these systems;</li> <li>-Components of refrigeration and heat pump cycles (compressors, valves, condensers, evaporators, turbines etc.);</li> <li>-analysis of cooling and heating cycles using the 1st and second law of thermodynamics, exergy analysis;</li> <li>-gas liquification;</li> <li>-techno-economic analysis of refrigeration and heat pump cycles;</li> <li>-Working fluids. Refrigerants for mechanical vapour compression; refrigerating machines: limits of application, evaluation of ODP and GWP;</li> <li>-Gas cycle refrigerating machines. Gas-phase cycles;</li> <li>-Magnetic refrigeration / heat pumping;</li> </ul>                                                                                                                                                                                                             |   |
| <b>Study Goals</b>                     | <p>By the end of this course, the students are able to:</p> <ul style="list-style-type: none"> <li>explain, reproduce and apply thermodynamic concepts in relation to refrigeration machines and heat pumps, considering their economic and environmental impact.</li> <li>recognize and apply the working principles, specific characteristics and application range of the most relevant methods to generate cooling and heating.</li> <li>explain and apply the concepts of gas liquefaction</li> <li>perform an energy and exergy analysis of refrigeration machines and heat pumps.</li> <li>evaluate the impact of the alternative concepts for refrigerating machines and heat pumps.</li> <li>sizing of heat pump and refrigeration equipment.</li> <li>perform techno-economic analysis of heat pumps and refrigeration systems.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                 |   |

| <b>Course Contents</b>                 | <p>This course is aimed at understanding the dynamics of buildings thermal behavior and at learning how to optimize their design and operation through thermal modeling, &amp; simulation. You will learn to solve problems like: how to shift or reduce peak heating demand to obtain a better match with a renewable energy system. What is thermally more efficient: a heavy concrete building or a light timber-frame building? How effective is night ventilation in warm periods? This course will provide you with answers to questions relating to dynamic thermal behavior in buildings. Amongst others you will learn about:</p> <ul style="list-style-type: none"> <li>- Energy chain from supply to demand and design steps</li> <li>- Basics of thermal comfort</li> <li>- Energy flows in buildings (transmission, ventilation &amp; infiltration, solar heat gains and internal heat gains)</li> <li>- Energy balance</li> <li>- Steady state simulations for peak load and energy usage estimates in pre-design (1 node energy balance model)</li> <li>- Transient simulation: The role of inertia in construction; setting up dynamic balance equations (Fourier equation), setting up a suitable RC network (multi-node energy balances); Solving the equations through finite difference and through transfer functions</li> </ul> <p>This is accompanied by many exercises to understand the optimization of building characteristics and peak shaving/shifting. The course ends up with an overview of energy conversion systems that can be used to supply the needed heating and cooling to buildings.</p> |   |
| <b>Study Goals</b>                     | <p>By the end of this course you will be able to:</p> <ul style="list-style-type: none"> <li>- explain how the heating and cooling needs of a building are determined by diverse building design parameters, weather, occupancy and comfort preferences of occupants.</li> <li>- translate this knowledge into design calculations (using steady state and transient balances) to optimize the energy demand towards zero energy buildings, to size the heating and cooling equipment, and to provide a good indoor thermal comfort.</li> </ul> <p>More specifically, you will be able to:</p> <ul style="list-style-type: none"> <li>- derive the mathematical equations describing the thermal performance of the various building components.</li> <li>- combine these equations to simulate the whole building system.</li> <li>- use dynamic simulations to answer questions about the optimal energy design, heating and cooling capacities, energy use, comfort.</li> <li>- translate the fuzzy term "comfort" into design requirements</li> <li>- simulate how thermostat control allows for peak shaving and shifting.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Education Method</b>                | <p>The course is built around a case study that runs like a common thread between the different course items. The case study is a self-paced individual assignment divided into 4 parts, that are discussed during workshops.</p> <p>Type of contact: Lectures, videos, guided exercises, 3 workshops and excursion. Sometimes we flip the classroom.</p> <p>Number of contact hours/week: 4</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Assessment</b>                      | <p>Formative assessment: 4 assignments with answers for self-study. Each of the assignments is discussed during workshops sessions of 2 hours.</p> <p>Summative assessment: Written exam (50% of grade) + Midterm quiz (50% of grade). The midterm quiz relates closely to the formative assignments.</p> <p>An average grade of 6 (rounded to the nearest 0.5) AND a minimal grade of 5 for the written exam are required to pass.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |

| <b>Summary</b>                          | The course covers basic principles and methods required for the design and selection of heat and mass transfer equipment (for instance heat exchangers and thermal separation processes). This allows for the integration of heat & mass transfer principles to design process equipment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Course Contents</b>                  | <p>Thermal energy can be converted or stored. Heat exchangers are needed in either case.</p> <p>This course will cover:</p> <ul style="list-style-type: none"> <li>Fundamentals of heat &amp; mass transfer,</li> <li>Design of different types of heat exchangers (shell and tube, plate, finned tubes ), regenerators/recuperators, cooling towers, and furnaces,</li> <li>Fouling of heat exchanger surfaces,</li> <li>characteristics of equipment for various separation processes</li> <li>the role of mass transfer in the sizing and design of the separation equipment.</li> <li>Cost Analysis,</li> <li>Pinch Technology</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Study Goals</b>                      | <p>By the end of this course, youd be able to design and rate heat &amp; mass transfer equipment. This can help you, for instance, to:</p> <ul style="list-style-type: none"> <li>- Quantify heating and cooling processes and requirements in various industrial applications such as: metallurgy, waste processes, food, agriculture, desalinization, freeze-drying.</li> <li>- Explain design requirements for different industrial heating and cooling processes.</li> <li>- Analyze existing industrial heating and cooling processes.</li> <li>- Identify decarbonization solutions for existing industrial heating and cooling processes.</li> <li>- Design suitable components/facilities/technologies for industrial heating and cooling processes.</li> <li>- Can describe and formulate thermodynamics equations and models for the selection and design of thermal separation processes.</li> <li>- Comprehends the role of heat and mass transfer in the dimensioning of equipment for separation processes.</li> </ul>                                                                                              |   |
| <b>Education Method</b>                 | Lectures, assignments, self-study, team work, tutorials                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Computer Use</b>                     | Standard engineering packages including ASPEN                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |

| <b>Course Contents</b>                 | <p>Computer simulation is central to energy system planning and operational decision-making. This course introduces advanced concepts and notions of modeling and simulation applied to energy systems. The course is divided into four themes: energy systems simulation, co-simulation, digital twins, and stochastic simulation. The first theme presents energy systems simulation concepts, including the different time-domain simulation models (dynamic, steady-state, scenario-based). In the second theme, challenges related to integrating different simulation models are presented, including topics such as data exchange, standardization, and APIs. The third theme presents the concept of digital twins, providing a detailed architecture for its implementation. The difference between digital twins and (co)simulation models is also presented. Finally, the fourth theme presents how to represent uncertainty when modelling and an introduction to Montecarlo simulation.</p>                                                                     |   |
| <b>Study Goals</b>                     | <p>At the end of the Energy Systems Simulation and Digital Twins course, you will be able to:</p> <p>[LO1] Categorize energy systems simulations according to model and solver properties.<br/> [LO2] Selecting simulation scope (e.g., time horizon, geography) and detail in accordance with application requirements.<br/> [LO3] Design a co-simulation including synchronization sequence and interface.<br/> [LO4] Implement a digital twin architecture for an energy systems application.<br/> [LO5] Implement and analyze the effect of aleatory and parametric uncertainty on simulation outcomes.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Education Method</b>                | <p>The course consists of lectures, assignments, and a project. The lectures introduce different topics, while the project requests students to apply the material studied in the lecture. Assignments are given each week to practice the concepts from the lecture or extend them before using such concepts in the project. During the practicums, students get to work on the project each week. Project milestones are organized in order to monitor the progress. The assignments and the project are done in groups.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Literature and Study Materials</b>  | <p>Supporting scientific papers, tutorials, and notes are published weekly on Brightspace.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |
| <b>Assessment</b>                      | <p>The grade is formed based on the student's and teams performance. A half-way project presentation is organized in Week 5 (Practicum 5) to monitor progress, accounting for 20% of the final grade. The final project presentation (oral exam) in Week 9 accounts for 60% of the final grade, while the project reports account for 20% of the final grade. In order to successfully complete the course, the students need to score a passing grade on all project aspects and during the oral exam. All students must participate in the completion of milestones. The final report is a document that combines the content of all intermediate milestones. Submission of the final report is mandatory for a passing grade.</p> <p>In case of an insufficient final result, repair options may exist in accordance with Article 17A &amp;#150; Times and number of examinations, sub 1, of the Teaching and Examination Regulations 2024-2025.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5).</p> |   |

| <b>Expected prior knowledge</b>        | Very basic programming skills in any programming language, elementary knowledge of probability theory and statistics.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Summary</b>                         | This course will teach students the fundamentals of Machine Learning and how these can be applied to sustainable energy systems with focus on digital technologies. After this introduction to Machine learning covering selected topics of fundamentals, the students can make use of this course by taking further courses within the scope of digital energy technologies, further machine learning courses and engage in thesis work that uses AI.                                                                                                                                                 |   |
| <b>Course Contents</b>                 | The course covers the following:<br>- statistical Learning (supervised/unsupervised),<br>- supervised regression,<br>- neural Networks,<br>- designing machine learning workflows<br>- physics-informed learning for energy applications<br>- learning with inductive bias in grids                                                                                                                                                                                                                                                                                                                    |   |
| <b>Study Goals</b>                     | After this course, students will be able to<br>1. describe machine learning concepts,<br>2. compare concepts of effective learning in the energy system domain<br>3. Apply machine learning training strategies using calculations and analysis of energy system problem.<br>4. design elements of an machine learning workflow for the energy system                                                                                                                                                                                                                                                  |   |
| <b>Education Method</b>                | Lectures, homework, project, and office hours.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Course Relations</b>                | This course is mutual exclusive with the course EE4C12. Students can not take this course if they have taken the course EE4C12.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Assessment</b>                      | Written exam (100% of grade). Passing the homeworks and project is a prerequisite to be eligible for taking the written exam.<br><br>In case of an insufficient final result, repair options may exist in accordance with Article 17A Times and number of examinations, sub 1, of the Teaching and Examination Regulations 2024-2025.The repair option is to resubmit the individual project or homework within 10 days after announcing the homework or project pass/fail grade.<br><br>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5). |   |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Course Contents</b>                 | <p>Due to temporal mismatch in availability and demand for heat, heat storage is needed. In this course you will learn that the need for storage is determined by the variations and mismatches in demand and supply profiles. Also, Power to heat is enabled by heat storage. Depending on the required storage requirements (volume, cycle length, temperature level) you will learn to design a heat storage system and quantify heat losses. The heat storage technologies covered in this course are:</p> <ul style="list-style-type: none"> <li>-Sensible heat storage: subsurface, pits, tanks</li> <li>-Latent heat storage: Phase change materials</li> </ul> <p>Because heat storage systems enable the use of heat sources, but are no heat sources themselves, the economics of heat storage is often complex. Therefore, the integration of heat storage in business cases is also covered in this course.</p>                                                                                                                      |   |
| <b>Study Goals</b>                     | <p>After taking this course you are able to:</p> <ul style="list-style-type: none"> <li>Assess the need for heat storage.</li> <li>Identify storage requirements for various supply-demand conditions.</li> <li>Select appropriate storage media for different conditions.</li> <li>Quantify and calculate heat convection, conduction and phase change heat transfer in various heat storage systems.</li> <li>Make a basic design and business case for different heat storage technologies, LCOE.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |

| <b>Expected prior knowledge</b>        | ME45111SET or equivalent (knowledge about Heating and Cooling demand of Buildings)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |
| <b>Course Contents</b>                 | <p>In this course you will learn how to decide on efficient combinations of energy conversion systems accounting for available heat sources, and how to distribute and control air and energy flows in buildings whilst minimizing carbon emissions and optimizing thermal comfort. To do this, you will learn about:</p> <ul style="list-style-type: none"> <li>- Rational no regret use of heat sources in relation to acceptable temperature levels in buildings &amp; neighbourhoods, depending on buildings insulation standard</li> <li>- Relationship between building systems and large-scale outdoor systems (like ATES or geothermal)</li> <li>- Air handling systems and properties of Humid air. Humidification/de-humidification, and related energy use</li> <li>- Distribution of heat/cold by air systems and low/high temperature</li> <li>- Distribution of heat/cold by hydronic systems and low/high temperature</li> <li>- Distribution of heat/cold by mixed systems</li> <li>- Room emitters and thermal comfort</li> <li>- Basics of control in HVAC systems</li> <li>- Thermal buffers and zoning</li> <li>- Designing a complete renewable-based energy systems for a a building (energy demand, energy supply, distribution)</li> <li>- Example of a complex building including heat pump, ATES, solar collectors, PV, free air cooling and distribution to multiple rooms</li> </ul> |   |
| <b>Study Goals</b>                     | <p>By the end of the course you will be able to:</p> <ul style="list-style-type: none"> <li>- Make substantiated no-regret choices of heat sources to be used in cities and buildings, depending on geographic availability (supply), acceptable temperature levels in the buildings under consideration (demand), and principles relating to rational use of energy sources.</li> <li>- Describe the different ways to distribute heat and cold in buildings, either through air systems or through hydronic (water) systems and their advantages and disadvantages.</li> <li>- Create zones with similar suitable temperature levels compatible with heat sources, distribution and room emitters, accounting for health &amp; comfort and use of renewables.</li> <li>- Engineer required capacity for, and distribution to the zones present in building.</li> <li>- Make a basic design for control engineering and thermal buffering in HVAC systems (Heating, Ventilation and Air Conditioning systems).</li> <li>- Make a complete renewable-based energy design of a building, including an ATES system, at the level of preliminary design</li> </ul>                                                                                                                                                                                                                                                  |   |
| <b>Education Method</b>                | Lectures, workshops, exercises, 2 weeks group work on integration of systems, excursion                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Assessment</b>                      | <p>Formative assessment: a series of short assignments with answers for self-study.</p> <p>Summative assessment: Midterm online exam (75% of grade) and groupwork on integrated design, assessed by short report and presentation (25% of grade). The midterm exam relates closely to the formative assignments.</p> <p>An average grade of 6 (rounded to the nearest 0.5) AND a minimal grade of 5 for the midterm quiz are required to pass.</p> <p>Resit/ Repair opportunities:<br/>In case of an insufficient final result, repair options may exist in accordance with Article 17A Times and number of examinations, sub 1, of the Teaching and Examination Regulations 2024-2025, for:</p> <ul style="list-style-type: none"> <li>- Online midterm quiz: written resit</li> <li>- Group project: resubmit report</li> </ul> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |

| Program Structure 1 | <p>For more information about the List of Electives, see the Brightspace Organisation of the Master Sustainable Energy Technology.</p> <p>The elective space should be used for one of more of the following purposes:</p> <ul style="list-style-type: none"> <li>To gain work experience (SET3822 Internship MSc SET, 15 credits),. Please note: The internship has a maximum fulltime duration of three months, this includes writing the final report. The internship cannot be part of a graduation project and it is not allowed to carry out both your internship and your thesis at the same company.</li> <li>To gain research experience (SET4399 Extra Project, max. 15 credits),</li> <li>To broaden their knowledge of the SET field,</li> <li>To deepen knowledge of the SET profiles (profile electives),</li> <li>To gain entrepreneurship skills (max. 6 credits),</li> <li>To further develop language skills (max. 3 credits).</li> </ul> <p>See the most up to date list of automatically approved elective courses on the Brightspace page of MSc SET. Other courses will be taken into consideration if and when submitted to the Board of Examiners.</p> |

| <b>Course Contents</b>                 | <p>The Joint Interdisciplinary Project aims to prepare students to contribute to impactful technological solutions for industrial/governmental R&amp;D and support one or more of the Global Sustainable development Goals or ToPsectoren in the Netherlands. Interdisciplinary and Intercultural teams of students work a dedicated ten weeks on a complex problem to realise an innovative and viable (primarily)technical solution. Team deliverables include a report, prototype, concept model and a business case to instigate continued developments. A company coach and JiP staff provide team guidance. Along the way, the companies and TU Delft offer students academic and industry expertise. The projects demand sound engineering working knowledge and experience with interdisciplinary and systems theory, knowledge and mindsets of innovation and entrepreneurial behaviour. The project brief is provided by renowned companies like Airbus, Embraer, Huisman, VanOord, Royal Haskoning DHV, Tahmo, Nationale Politie, Erasmus MC, and KLM.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |    |
| <b>Study Goals</b>                     | <p>Meta-cognitive abilities attributable to interdisciplinary learning</p> <p>LO 1: Demonstrate disciplinary grounding, showing synthesis and integration of different disciplinary scientific and professional (technological) knowledge systems and critical evaluation skills of the approaches used to solve complex problems (ILO:K)</p> <p>Scientific and intellectual development</p> <p>LO 2: Demonstrate the ability to carry out the analysis and evaluation of ethical, scientific and societal consequences of the proposed innovation (ILO: I)</p> <p>Research and design capabilities</p> <p>LO3: Demonstrate the ability to create reasonable and relevant output, in accordance with the academic standards of well conducted research, design, modelling and technical approaches for the problem addressed within JIP. (ILO: I,J)</p> <p>Collaboration and communication in an interdisciplinary team</p> <p>LO 4: Demonstrate behavioural competences and skills relevant for interdisciplinary teamwork and effective communication with different stakeholders (ILO: K)</p> <p>Self-adjustment and reflection capabilities</p> <p>LO 5: Demonstrate to carry out regular reflections on professional and personal development and being able to improve upon those reflections (ILO: K)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |    |
| <b>Education Method</b>                | <p>Full-time project work in an interdisciplinary team of about five students. The project work is interspersed with some just in time seminars and workshops about specialized subjects, methods or practical situations that play an essential role in interdisciplinary project work.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |    |
| <b>Assessment</b>                      | <p>Students will meet (online) during the module and discuss their project with professionals, the company, and academia. The JIP core team will also guide the team process. The module includes three review sessions:</p> <p>Problem statement review the teams are required to present the scope of their problem in the form of a two-pager report. The main activity during this review is the team presentation of the academic staff, company coaches, JIP core staff and teams within the same cluster. The formative and 360 grades feedback means giving a head start in the execution of the project. The input is based on a rubric addressing interdisciplinary teamwork, scientific and technical rigour, responsible /ethical engineering, innovation and communication skills.</p> <p>Midterm review The teams present multiple solution concepts in a four-page report and a presentation to the academic staff, company coaches, JIP staff and students within the same cluster. Teams should demonstrate that the feedback based on the rubric has been considered and incorporate into the work leading up to the mid-term review. However, the Midterm review uses the same criteria as the problem definition, re-evaluated at a deeper level.</p> <p>In addition to the review sessions, the JiP team monitors individual growth. The monitoring is done by reviewing a team blog, which shows the team's progress to peers in JIP and beyond. The team blog is meant to get feedback and keep track of the decisions students have made while working together concerning the project and team process. The individual process is realised by a 360-degree team feedback tool and team sessions to jointly evaluate the team process and improve the individual professional and collaborative attitude. (4 Team blogs/4 Personal Reflection blogs/ 4 time 360-degree team feedback)</p> <p>Summative assessment on module level</p> <p>Final review the presentation is behind closed doors and is open for academic staff, JIP staff and the company coach(es).</p> <p>Note that; the grade for the project report/presentation/prototype/model/design (80% of the final grade) will only be given if the two earlier reports (the two-pager on the problem statement review and the four-pager of the midterm review) are handed in as well. The items are assessed according to a rubric addressing interdisciplinary teamwork, scientific and technical rigour, responsible /ethical engineering, innovation and communication skills. The assessors (company, academic and Jip staff) will score the rubric independently, after which a final grade is calibrated and discussed with the entire committee. The Problem def/mid-term reviews and the growth that has occurred during the process are incorporated in the final grade. The committee consists of minimally, the company coach, one academic staff member with expertise on the topic, 1 (academic chair), 1 Jip staff. Often an additional expert from the field and academic staff member is added.</p> |    |

The minimum grade for the summative assessment is  $\geq 5.8$ .

Process grade is 20%

The team blog/personal blog is evaluated according to a rubric on interdisciplinary teamwork, professional development, academic attitude, personal leadership. The deliverables are subject to a knockout system. Meaning the grade is insufficient if not delivered. Students cannot finalise the project without handing in the obligatory work.

| <b>Expected prior knowledge</b>        | Familiarity with transport phenomena (e.g. a course on heat transport), basic fluid dynamics, elementary differential equations, and introductory electrochemistry. Ideal preparation include the courses ME45201, CH3513, or SET3110. A previous course on fuel cells, batteries, or similar, or additional self-study may also be sufficient.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Course Contents</b>                 | <p>Electrochemistry plays a pivotal role in the transition towards a sustainable energy future. Renewable electrical energy can be stored in batteries or used to synthesise chemicals or fuels in electrochemical reactors, like an electrolyser producing hydrogen. This course will introduce to a student, the knowledge and skills required to understand, model and optimize such electrochemical devices.</p> <p>Content overview:</p> <p>Porous electrode theory, multiphase flow, and transport models will be used to derive analytical current-voltage relations of various electrochemical devices including fuel cells, batteries, redox flow batteries, and electrolysers.</p> <p>Some of the topics that will be discussed in this course include:</p> <ul style="list-style-type: none"> <li>- The Nernst-Planck equations for ionic transport in binary electrolytes.</li> <li>- Porous electrode theory using the concept of an electrochemical Thiele modulus.</li> <li>- The flooded agglomerate and relative permeability models for gas diffusion electrodes.</li> <li>- The single particle and Newman's P2D battery models.</li> <li>- A vertical current and gas distribution model for electrolysers.</li> </ul>                           |   |
| <b>Study Goals</b>                     | <p>After successful completion of this course, the student is able to independently:</p> <ol style="list-style-type: none"> <li>1. explain and apply porous electrode theory.</li> <li>2. derive 0D, 1D, and 2D mathematical models to describe the current-voltage relationship of various electrochemical cells including flow, multiple phases, and porous electrodes.</li> <li>3. optimize an electrochemical cell design with respect to, for example, energy efficiency.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Education Method</b>                | Two lecture hours + two exercise hours per week.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Course Relations</b>                | This course is a natural sequel to ME45201, CH3513, and SET3110 for students interested in analytical modelling of electrochemical systems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Books</b>                           | Electrolysers, Fuel Cells and Batteries: Analytical Modelling. (J.W. Haverkort) <a href="https://doi.org/10.59490/tb.93">https://doi.org/10.59490/tb.93</a> (open access)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Assessment</b>                      | Written exam.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |

| <b>Expected prior knowledge</b>       | Basic thermodynamics. Basic chemistry and knowledge of kinetics is not required, but will be helpfull                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Course Contents</b>                | One of the main challenges that mankind faces in the 21st century is the energy transition from fossil fuels and feedstocks to renewable sources. Most renewable energy sources, such as solar and wind energy, are intermittent. Therefore, large scale energy storage is required to successfully increase the share of these renewable energy sources. One way of achieving this is by storing energy using electrochemical systems and devices. This course introduces the principals of electrochemical energy storage and conversion to students new to field. Examples of topics discussed during this course are the thermodynamics and kinetics of electrochemical systems, transport phenomena, the electrochemical double layer, electrocatalysis and an introduction to electrochemical methods and measurements. We will discuss these topics in the light of electrochemical applications such as batteries, electrolyzers and fuel cells.                                   |   |
| <b>Study Goals</b>                    | <p>After successful completion of this course, the student is able to independently:</p> <ol style="list-style-type: none"> <li>1. Apply electrochemical nomenclature to describe the electrochemical cell and electrochemical measurements;</li> <li>2. Explain the concept of the electrochemical double layer and mass transport in the electrolyte;</li> <li>3. Apply basic principles of electrochemical thermodynamics, such as the Nernst equation, overpotentials and (standard) equilibrium potentials;</li> <li>4. Apply basic principles of electrochemical kinetics, such as the Tafel equation and the Buttlar-Volmer model;</li> <li>5. Explain the principles that determine the electrocatalytic performance of materials;</li> <li>6. Interpret scientific literature reports on electrochemical energy storage and conversion systems and devices.</li> <li>7. Explain the working principles of different fuel cell, electrolyzers and battery technologies.</li> </ol> |   |
| <b>Education Method</b>               | Combination of two to four lecture hours per week and self-study. Homework assignments will be given after every lecture and will be discussed in class.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |
| <b>Course Relations</b>               | A suitable follow-up course may be ME45203: Electrolyzers, Fuel Cells and Batteries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Literature and Study Materials</b> | Study materials will be the lecture slides, homework exercises and practice exams.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Books</b>                          | Part of the lectures have large overlap with the book 'Electrochemical Engineering' by Fuller and Harb, which is recommended reading but not required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Assessment</b>                     | The method of assessment will be a written exam. If campus examination is not possible the prescribed assessment will be as follows: oral exam and presentation on a literature report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |

| SET3822                                | Internship SET                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 15 |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |    |
| <b>Course Contents</b>                 | <p>The Internship SET (SET3822) is a project on a sustainable energy engineering topic performed at a company or institute, either in the Netherlands or abroad. The internship has a study load of 15 EC, which is equivalent to a maximum full-time duration of 3 months, this includes writing the final report.</p> <p>General guidelines are that it should concern a design, model, system integration or methodology implementation, or an experimental study relevant for the company involved. The topic of the project should fall within at least one of the profiles of the chosen profile cluster. Literature study can only be a minor part of the internship.</p> <p>When carrying out Internship SET (SET3822) at a company or institute, the following conditions apply:</p> <ul style="list-style-type: none"> <li>- The student joins in with the company or institute culture in general, including sharing the company-established balance between on-site and online work.</li> <li>- The student joins in with the day-to-day running of the company or institute similar to regular employees. This includes having regular consultation and interaction with colleagues and manager(s), and access to and use of the company-specific resources and tools applicable to the internship. Such resources and tools can be physical/on-site (e.g. measurement equipment, company machines and infrastructure) as well as virtual (online, software tools, databases, ...).</li> </ul> |    |
| <b>Study Goals</b>                     | <p>There are five main learning objectives (LO) for Internship SET (SET3822):</p> <p>LO1: The student is able to contribute to research and development in a company within the field of sustainable energy technology.</p> <p>LO2: The student is able to report the results to the company supervisor and the TU Delft supervisor.</p> <p>LO3: The student is able to communicate and collaborate in a professional environment.</p> <p>LO4: The student is able to describe the effect of sustainable energy innovations on the society.</p> <p>LO5: The student is able to reflect on their own role and the added value of the internship to their study programme.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |    |
| <b>Education Method</b>                | <p>Project</p> <p>The Internship SET (SET3822) follows certain steps:</p> <ol style="list-style-type: none"> <li>1. Orientation</li> <li>2. Kick-off meeting</li> <li>3. Delivering the final report</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |    |
| <b>Prerequisites</b>                   | <p>In order to ensure that students start the internship with a solid skill set, the student can apply for Internship SET after the third quarter of the first year of the MSc SET programme. Before starting the internship, the student needs to have an Individual Exam Programme (IEP) approved by the Board of Examiners and the courses of the first three quarters of the first year of the MSc SET programme must have been completed. A student can also start when at least 45 credits of the Master's degree course work as stated in the IEP have been completed.</p> <p>Before starting the project, the student, the responsible supervisor, the company supervisor and the profile leader agree that the student will conduct an internship project under the responsibility of the responsible supervisor, with the support of the company supervisor. The student and responsible and company supervisor:</p> <ul style="list-style-type: none"> <li>- Agree on a starting date;</li> <li>- Agree on what is expected during the kick-off meeting.</li> </ul> <p>The agreements are written in the Internship Application Form. This form needs to be signed by the student, the responsible supervisor, and the relevant profile leader, and then submitted to the Internship Office. This is done just before the kick-off meeting.</p>                                                                                                                                                  |    |
| <b>Assessment</b>                      | <p>The student needs to write a technical report during the internship and send it to the company supervisor and the TU Delft supervisor on the final day of the internship.</p> <p>The student needs to write a reflection note and a testimonial and send these documents, together with the technical report, to the internship office, on the final day of the internship.</p> <p>The company supervisor needs to send the evaluation within two weeks after the end of the internship to the TU Delft supervisor.</p> <p>The TU Delft supervisor needs to send the TU evaluation and the company evaluation to the internship office, within two weeks after receiving the evaluation from the company supervisor.</p> <p>When the internship office has received the two reports and the two assessment forms, the grade will be processed within a week.</p> <p>The Internship Grading Scheme will be used as a guideline to determine the mark. Please, consult the Brightspace page Internship SET for the detailed grading scheme.</p> <p>The TU Delft supervisor is responsible for the final grading. The internship will be graded with a pass or a fail (not numerically).</p> <p>Resit/ Repair opportunities:<br/>In case of an insufficient final result, repair options may exist in accordance with Article 17A Times and number of examinations, sub 1, of the Teaching and Examination Regulations 2024-2025, for:<br/>- Report: resubmit deliverable</p>                               |    |
| <b>Special Information</b>             | <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5).</p> <p>The project needs to be carried out according to MSc SET guidelines of Delft University of Technology. This is safeguarded by the requirement to have a responsible supervisor who is on the SET green list for the most relevant profile.</p> <p>NB: Internship SET (SET3822) can never be part of a Graduation Project (SET3901) and it is not allowed to carry out both an internship and the graduation project at the same company.</p> <p>The Internship SET (SET3822) is subject to strict rules and procedures. Enrol in the Brightspace page Internship SET for more information. One can find the step-by-step guide explaining all procedures, forms, and additional information e.g. about grants and funding for internships abroad.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |    |

| <b>Course Contents</b>                 | <p>Extra Project (SET4399) is a small research project on a sustainable energy engineering topic carried out within a research group at Delft University of Technology. The project has a maximum study load of 15 EC, with an equivalent maximum full-time duration of 3 months, this includes writing the final report.</p> <p>General guidelines are that it should concern a design, model, system integration or methodology implementation, or an experimental study relevant for the research group involved. The topic should fall within at least one of the profiles of the chosen Profile Cluster. Literature study can only be a minor part of the project.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Study Goals</b>                     | <p>There are five main learning objectives (LO) for Extra Project (SET4399):</p> <p>LO1: The student is able to contribute to research and development within the field of sustainable energy technology in a TU Delft research group.</p> <p>LO2: The student is able to report the results in a comprehensive manner to the TU Delft supervisor.</p> <p>LO3: The student is able to communicate to and collaborate with members of the research group.</p> <p>LO4: The student is able to describe the effect of the research and its relationship with sustainable energy innovations on society.</p> <p>LO5: The student is able to reflect on their own role and the added value of the project to their study programme.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Education Method</b>                | <p>Project</p> <p>The Extra Project (SET4399) follows certain steps:</p> <ol style="list-style-type: none"> <li>1. Orientation</li> <li>2. Kick-off meeting</li> <li>3. Delivering the final report</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Prerequisites</b>                   | <p>In order to ensure that students start the project with a solid skill set, the student can apply for the Extra Project after the third quarter of the first year of the MSc SET programme. Before the application for Extra Project (SET4399), the student needs to have an Individual Exam Programme (IEP) approved by the Board of Examiners and the courses of the first three quarters of the first year of the MSc SET programme must have been completed. A student can also start when at least 45 credits of the Master's degree course work as stated in the IEP has been completed.</p> <p>Before starting the project, the student, the responsible supervisor and the profile leader agree that the student will conduct a research project under the responsibility of the responsible supervisor. The student and responsible supervisor:</p> <ul style="list-style-type: none"> <li>- Agree on the starting date;</li> <li>- Agree on what is expected during the kick-off meeting.</li> </ul> <p>The agreements are written in the Extra Project Application Form. This form needs to be signed by the student, the responsible supervisor and the Director of Studies (for students within the Electrical Energy track) or the master coordinator (for students within the Heating &amp; Cooling track). This is done just before the kick-off meeting.</p> |   |
| <b>Assessment</b>                      | <ul style="list-style-type: none"> <li>- The student needs to write a scientific report during the Extra Project and send it to the TU Delft supervisor on the final day of the project.</li> <li>- The student needs to write a reflection note and a testimonial and send these documents, together with the scientific report, to the responsible instructor, on the final day of the project.</li> <li>- The TU Delft supervisor needs to send the assessment form to the responsible instructor, within two weeks after receiving the documents from the student.</li> <li>- When the responsible instructor has received the two reports and the assessment form, your grade will be processed within a week.</li> </ul> <p>Please, consult the Brightspace page SET4399 Extra Project for the detailed grading scheme.</p> <p>The Extra Project will be graded with a pass or a fail (not numerically).</p> <p>Resit/ Repair opportunities:<br/>In case of an insufficient final result, repair options may exist in accordance with Article 17A Times and number of examinations, sub 1, of the Teaching and Examination Regulations 2024-2025, for:</p> <ul style="list-style-type: none"> <li>- Report: resubmit deliverable</li> </ul>                                                                                                                               |   |
| <b>Special Information</b>             | <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5).</p> <p>The project needs to be carried out according to MSc SET guidelines of Delft University of Technology. This is safeguarded by the requirement to have a responsible supervisor who is on the SET green list for the most relevant profile.</p> <p>NB: Extra Project (SET4399) can never be used as preparation for a Graduation Project (SET3901).</p> <p>The Extra Project is subject to strict rules and procedures. Enrol in the Brightspace page SET4399 Extra Project for more information. One can find the step-by-step guide explaining all procedures, forms, and additional information e.g. about the assessment.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Co-Instructor</b>                   | Dr.ir. J.M. Bloemendal                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |

| WM0320TU                               | Ethics and Engineering                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 3 |

| <b>Course Contents</b>                 | You will explore the ethical and social aspects and problems related to technology and to your future work as professional or manager in the design, development, management or control of technology. You will be introduced to and make exercises with a range of relevant aspects and concepts, including professional codes, philosophical ethics, individual and collective responsibilities, value pluralism and relativism, responsibility within organisations, responsible conduct of companies and the role of law. You will analyse legal, political and organisational backgrounds to existing and emerging ethical and social problems of technology, and you will explore possibilities for resolving, diminishing or preventing these problems.                                                                                                                  |   |
| <b>Study Goals</b>                     | <p>After having completed the course you:</p> <ul style="list-style-type: none"> <li>can better recognise and analyse ethical and social aspects and problems inherent in technology and in the work of professionals and managers active in the design, development, management and control of technology.</li> <li>have insight into how these ethical and social aspects and problems are related to legal, political and organisational backgrounds.</li> <li>are able to explore and assess possibilities for solving or diminishing existing and emerging ethical and social problems that attach to technology and the work of professionals and managers.</li> <li>are better prepared to perform your future work as a professional or manager in the design, development, production and control of technology in an ethical and socially responsible way.</li> </ul> |   |
| <b>Education Method</b>                | A series of 6 lectures and 5 interactive work sessions with partial assessment, concluded with a written test.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Literature and Study Materials</b>  | Chapters from the Reader Ethics and Engineering, available at Nextprint and as PDF files on Brightspace; articles available as PDF on Brightspace; Powerpoint slides, materials used in the working groups, and lecture notes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Assessment</b>                      | <p>Written exam (60%, individual grade), presentation and active participation during the working group sessions (40%, same grade for all members of a presentation group).</p> <p>In order to pass the course, a minimal grade of 5.5 should be obtained *both* in the exam *and* in the working group, and the average grade should be higher than 5.75.</p> <p>It is possible to re-take the exam without re-taking the working groups, in this case the working group grade will be kept. If you re-take the exam, it is also possible to re-attend the working groups to improve the final grade.</p> <p>These partial grades are only valid for 1 academic year, meaning that if one or both are not passed during resit, both assessments need to be retaken the following academic year.</p>                                                                            |   |
| <b>Enrolment / Application</b>         | Enrolment via Brightspace is required for this course. This is needed in order to plan the workgroups. Please enroll as soon as possible and check Brightspace for more information on the enrolment on the enrolment procedure and timeline. The Brightspace page will be activated a couple of weeks before the start of the course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Remarks</b>                         | The course is run twice each year in the first and third quarter. The course is identical to the initial part of the course WM0329TU (6 ects).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |

| <b>Course Contents</b>                | This speaking course focuses on the language and skills students need to participate successfully at the university. Students will engage in a number of activities both inside and out of the classroom - to practise and improve their English. The vocabulary focus will be on general academic language, so that after the course students can interact with more confidence in an academic setting.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Study Goals</b>                    | The aim of the course is to develop language skills needed for the university environment. You will learn phrases and words for a range of skills needed here, for example participating in discussions; rephrasing and explaining; giving an opinion, (dis)agreeing, making suggestions; describing and presenting a concept.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Education Method</b>               | Group and pair work, combined with assignments to do at home. Feedback on course components is given by the course lecturer and other students                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Literature and Study Materials</b> | To be announced in Brightspace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Practical Guide</b>                | You can only take this course when you have taken our Placement Test, and received a Course Recommendation for this course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Assessment</b>                     | <p>We offer this Placement Test regularly. The Course Recommendation that you receive is valid for a year. This means, for example, that you can take the test in October, and sign up for a course that starts in April.</p> <p>Class participation and weekly assignments. An 80% attendance rate is obligatory, which means you may only miss one session. To keep your place in the group you must attend the first session.</p> <p>The assignments must be submitted each week before the deadline set by the instructor.</p> <p>You can drop the course with no penalty before the second session. Be aware of your "commitment" from the start, as you will still receive a grade [NV: Niet Verschenen--Not Attending], in Osiris even if you stop coming to class after session 2.</p>                                                                  |   |
| <b>Enrolment / Application</b>        | <p>Before enrolling in a group you must first take our Placement Test. This is not an actual test but a tool to ensure that you are taking the course that is the most suitable for your level of English.</p> <p>For more information on this 'test' please visit our website: <a href="https://www.tudelft.nl/tbm/itav/onderwijs/english-unit/placement-test">https://www.tudelft.nl/tbm/itav/onderwijs/english-unit/placement-test</a></p> <p>Enrolment for the course (and the Placement Test) is via Brightspace. Type 'TPM301C'(or 'Placement Test') in Course search (Catalog). Make sure you select the correct academic year and quarter. Register in the course AND in a group that suits your schedule.</p> <p>You do not need to register for this course in Osiris.</p> <p>Please note that you must also enrol in a group to reserve a place.</p> |   |
| <b>Remarks</b>                        | <p>You can drop the course with no penalty before the second session. Be aware of your "commitment" from the start, as you will still receive a grade [NV: Niet Verschenen--Not Attending], in Osiris even if you stop coming to class after session 2.</p> <p>The course will only be offered if there is a sufficient number of participants.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |

| <b>Course Contents</b>                 | <p>This speaking course focuses on expanding and improving the language students need to participate at the university. A particular focus point of the course is the vocabulary needed at a higher level of English, both in an academic and a more general context.</p> <p>A range of sources for language input is offered, such as podcasts, videos, websites, or (academic) articles.</p> <p>The sessions revolve around student interaction.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Study Goals</b>                     | <p>The first aim of the course is to improve and expand the language skills needed at a higher level of English. These include paraphrasing and sharing information with others, using polite language, giving feedback, and presenting information.</p> <p>Another study course goal is to expand and improve the students' general vocabulary.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |
| <b>Education Method</b>                | Group and pair work, combined with (individual) assignments to do at home. Feedback on course components is given by the course lecturer and other students.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Literature and Study Materials</b>  | To be announced in Brightspace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Practical Guide</b>                 | This is a course for both BSc and MSc students who would like to expand and improve their English language skills.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Assessment</b>                      | <p>Class participation and weekly assignments. An 80% attendance rate is obligatory, which means you may only miss one session. To keep your place in the group you must attend the first session.</p> <p>The assignments must be submitted each week before the deadline set by the instructor.</p> <p>You can drop the course with no penalty before the second session. Be aware of your "commitment" from the start, as you will still receive a grade [NV: Niet Verschenen--Not Attending], in Osiris even if you stop coming to class after session 2.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Enrolment / Application</b>         | <p>Before enrolling in a group you must first take our Placement Test. This is not an actual test but a tool to ensure that you are taking the course that is the most suitable for your level of English. When you have taken our Placement Test you will receive a course recommendation. With this recommendation you can sign up for this course. You can only register for courses that are recommended to you, or do not require a Placement Test.</p> <p>For more information on this 'test' please visit our website: <a href="http://www.itav.tudelft.nl">www.itav.tudelft.nl</a></p> <p>Enrolment for the course (and the Placement Test) is via Brightspace. You do not need to register for this course in Osiris.</p> <p>Please note that you must also choose a group to reserve a place in the class. Type 'TPM302B' in Course search (Catalog). Please make sure you select the correct academic year and quarter. Register in the course AND in a group that suits your schedule.</p> |   |
| <b>Remarks</b>                         | <p>The course will only be offered if there is a sufficient number of participants.</p> <p>Please note that it is not a presentation course.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Elective</b>                        | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Course Contents</b>                 | This course is designed for students who have started their MSc thesis or are about to start on their graduation project. The main focus is on the writing process, which means that matters such as grammar, academic style and precision of formulation are considered at length. Particular attention is also paid to the importance of structure and organising ideas. Aspects of the writing process will be backed up by weekly reading and writing assignments.                                                                                                                                                                                                                                                      |   |
| <b>Study Goals</b>                     | The course is primarily designed for students working on their Masters thesis. As the name of the course indicates, the focus throughout is on writing. Samples of your academic writing will be corrected in considerable detail and you will be taught how to structure your thesis. Plenty of tips will be given on ways of perfecting your English and invigorating your writing. Your systematic mistakes will be pointed out to you so that you can become critical about your own writing and go on to do your own editing.                                                                                                                                                                                          |   |
| <b>Education Method</b>                | Learning by doing and learning from lectures, corrections, peer review and tutor feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Books</b>                           | Academic Writing for Graduate Students, Essential Tasks and Skills ,3rd edition by John M. Swales & Christine B. Feak. ISBN: 978-0-472-03475-8                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Assessment</b>                      | <p>Continuous assessment. Participants are to submit a number of text analysis and writing assignments in which they demonstrate their writing skills and their understanding of text composition and academic English.</p> <p>You may not submit texts that were previously submitted for any other course. Students who submit their weekly assignments late, repeatedly miss deadlines or lack commitment may be asked to leave the course.</p> <p>An 85% attendance record is required. This means students may miss no more than one session (preferably none).</p> <p>Students will receive their course credits when their work shows sufficient progress and weekly deadlines and all other conditions are met.</p> |   |
| <b>Special Information</b>             | Enrolment is through Brightspace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Remarks</b>                         | The course will only be offered when there is sufficient demand. If there are not enough enrolments, the course may be cancelled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |

| <b>Course Contents</b>                 | The Writing Academic English using AI course is designed to elevate students' writing proficiency through the strategic use of AI tools. Students learn the conventions of academic writing, such as text structure, paragraph structure, sentence structure, grammatical variation, and formal-vs-informal words. They will practise editing and proofreading with AI, focusing on improving grammar, style, and coherence. They also learn to critically evaluate the AI-generated responses. Additionally, the course will cover ethical considerations in the use of AI in writing, ensuring students understand issues related to plagiarism and data privacy.                                                                  |   |
| <b>Study Goals</b>                     | This course aims to familiarise students with academic writing conventions and show them how to use large language models to improve their writing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Education Method</b>                | This is a 7-week course with one lesson a week.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Literature and Study Materials</b>  | Course material will be announced in Brightspace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Books</b>                           | Course material will be announced in Brightspace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Prerequisites</b>                   | <p>Before enrolling in this course you must first take our Placement Test. When you have taken our Placement Test you will receive a course recommendation. With this recommendation you can sign up for this course. You can only register for courses that are recommended to you, or do not require a Placement Test.</p> <p>Enrolment for the course (and the Placement Test) is via Brightspace. You do not need to register for this course in Osiris.</p> <p>Please note that you must also choose a group to reserve a place in the class. Type 'TPM306A' in Course search (Catalog). Please make sure you select the correct academic year and quarter. Register in the course AND in a group that suits your schedule.</p> |   |
| <b>Assessment</b>                      | Continuous assessment. Participants submit various writing assignments in which they demonstrate their writing skills and their ability to critically evaluate the output given by AI tools.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Remarks</b>                         | The course will only be offered if there is a sufficient number of participants.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |

| <b>Parts</b>                            | Preparing lessons at home by reading, listening and repeating Dutch texts, speaking during conversation class. Continual testing through listening tests and gap filling tests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Course Contents</b>                  | Dutch Elementary 1 is a basic Dutch language course aimed at every day communication. You will learn the language through reading, analysing and listening to texts on various topics as preparation for the lessons. The lessons themselves will be mainly devoted to speaking. Regular testing is also part of this course.                                                                                                                                                                                                                                                                                                                                                                   |   |
| <b>Study Goals</b>                      | The goal of this course is to acquire basic Dutch language skills on CEF level A1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Education Method</b>                 | Interactive group sessions, individual work through online course materials.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Literature and Study Materials</b>   | Bondi Sciarone e.a., "Nederlands voor buitenlanders. De Delftse Methode". Text book. 5th revised edition.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Assessment</b>                       | The final grade is compiled of grades for speaking skills during class and several tests and assignments during the course period: listening tests and written gap filling tests. Attendance also contributes to the final grade.<br>If this final grade is not sufficient, students sit a written exam, a speaking test or a combination of both. These tests take place after the regular course period.                                                                                                                                                                                                                                                                                      |   |
| <b>Permitted Materials during Tests</b> | No materials admitted during tests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |
| <b>Enrolment / Application</b>          | --- for MSc/BSc students ---<br>There is a two-step-enrolment procedure.<br>1: Enrolment in Preliminary program for Dutch Elementary 1 course This programme takes place one week before the actual course. It is meant for receiving information about the learning method. On top of that, you will self-study the first two texts and sit the introductory test. If you pass, you can enrol for the actual course Dutch Elementary 1.<br>2: Enrolment in the actual course Dutch Elementary 1 (WM1115TU)<br>You can enrol for one of the groups.<br><br>--- for others (PhDs, employees) ---<br>Go to the website <a href="http://www.dm.tudelft.nl">www.dm.tudelft.nl</a> for registration. |   |

| <b>Required for</b>                     | After this course, participants can continue learning in Dutch Intermediate 1 (course code WM1117TU)                                                                                                                                                                                                                                                                                                       |   |
| <b>Expected prior knowledge</b>         | A completed course Elementary 1 (WM1115TU). It is also possible to enrol if you have a similar level: CEF A2. In that case you have to sit a level test. Contact <a href="mailto:delftsemethode@tudelft.nl">delftsemethode@tudelft.nl</a> .                                                                                                                                                                |   |
| <b>Parts</b>                            | Preparing lessons at home by reading, listening and repeating Dutch texts, speaking during conversation class. Continual testing through listening tests and gap filling tests.                                                                                                                                                                                                                            |   |
| <b>Course Contents</b>                  | Dutch Elementary 2 is the second part of a basic Dutch language course aimed at every day communication. You will learn the language through reading, analysing and listening to texts on various topics as preparation for the lessons. The lessons themselves will be mainly devoted to speaking. Regular testing is also part of this course.                                                           |   |
| <b>Study Goals</b>                      | The goal of this course is to acquire basic Dutch language skills on CEF level A2.                                                                                                                                                                                                                                                                                                                         |   |
| <b>Education Method</b>                 | Interactive group sessions, individual work through online course materials.                                                                                                                                                                                                                                                                                                                               |   |
| <b>Literature and Study Materials</b>   | Bondi Sciarone e.a., "Nederlands voor buitenlanders. De Delftse Methode". Text book. 5th revised edition.                                                                                                                                                                                                                                                                                                  |   |
| <b>Assessment</b>                       | The final grade is compiled of grades for speaking skills during class and several tests and assignments during the course period: listening tests and written gap filling tests. Attendance also contributes to the final grade.<br>If this final grade is not sufficient, students sit a written exam, a speaking test or a combination of both. These tests take place after the regular course period. |   |
| <b>Permitted Materials during Tests</b> | No materials admitted during tests.                                                                                                                                                                                                                                                                                                                                                                        |   |

| <b>Course Language</b>                  | Dutch                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Required for</b>                     | After this course, participants can continue learning in Dutch Intermediate 2. This is a paid course, also for students and will not give you ECTS credits.                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Expected prior knowledge</b>         | A completed course Elementary 2 (WM1116TU). It is also possible to enrol if you have a similar level: CEF A2+. In that case you have to sit a level test. Contact <a href="mailto:delftsemethode@tudelft.nl">delftsemethode@tudelft.nl</a> .                                                                                                                                                                                                                                                                                                         |   |
| <b>Parts</b>                            | Preparing lessons at home by reading, listening and repeating Dutch texts, speaking during conversation class. Continual testing through listening tests and gap filling tests.                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Course Contents</b>                  | Dutch Intermediate 1 is the second part of a basic Dutch language course aimed at every day communication. You will learn the language through reading, analysing and listening to texts on various topics as preparation for the lessons. The lessons themselves will be mainly devoted to speaking. Regular testing is also part of this course.                                                                                                                                                                                                   |   |
| <b>Study Goals</b>                      | The goal of this course is to acquire basic Dutch language skills on CEF level A2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |
| <b>Education Method</b>                 | Interactive group sessions, individual work through online course materials.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| <b>Literature and Study Materials</b>   | Wesdijk en Blom Sciarone e.a., "Tweede Ronde, herziene editie. Nederlands voor buitenlanders. De Delftse Methode". Text book.                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Assessment</b>                       | The final grade is compiled of grades for speaking skills during class and several tests and assignments during the course period: listening tests and written gap filling tests. Attendance also contributes to the final grade.<br>If this final grade is not sufficient, students sit a written exam, a speaking test or a combination of both. These tests take place after the regular course period.                                                                                                                                           |   |
| <b>Permitted Materials during Tests</b> | No materials admitted during tests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |

| <b>Summary</b>                         | <p>This course examines how large corporations engage startups to tap into new markets, technologies and business models.</p> <p>You will develop knowledge and skills to analyse strategic situations of existing corporates and how they innovate through engaging startups. The course provides an eye on corporate startup engagement from both the corporate and startup perspective.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Course Contents</b>                 | <p>Large international organizations often find themselves in a luxurious position compared to small start-ups. They have more financial capital, access to markets, and more technological knowledge. However, large international organizations are confronted with increasing external turbulence, technological advancement and globalization, which puts their luxurious position in jeopardy. At the same time the luxurious position constrains them to depart from present activity and focus on radical new innovations. Hence, corporates try to renew themselves through internal entrepreneurial behaviour, but also by initiating start-ups and acquiring start-ups to experiment with new technology. Many times, these start-ups originate in academic environments. Therefore we pay specific attention to the emergence of academic start-ups and how corporate organizations provide incubation facilities and venture capital support to engage startups to renew themselves.</p> <p>This course examines the various forms of corporate entrepreneurship and the relationship with corporate strategy in particular. You will develop knowledge and skills to analyze strategic situations and design the most appropriate solutions in terms of corporate entrepreneurship strategy and organization.</p> |   |
| <b>Study Goals</b>                     | <p>Understand the concept of corporate entrepreneurship; the contexts, the forms, and the relationship with strategic management</p> <p>Analyze strategic situations and design appropriate corporate entrepreneurship strategies and organizations</p> <p>Analyse the contribution of internal and external ventures in the renewal of large corporates</p> <p>Understand the emergence of academic spin-offs and how they relate to the technology development of large established organisations</p> <p>Identify the various key actors that facilitate and support the emergence of new business ventures and academic spin-offs</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Education Method</b>                | <p>Each session consists of a mixture of lecturing, and discussions of cases, literature and assignments, and presentations. Each student will be expected to be present during lectures (two times a week), actively participate during the lectures, complete assigned readings, read posted lectures, listen to thought leader presentations and submit written assignments when due.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |
| <b>Literature and Study Materials</b>  | <p>Journal articles:<br/>Will be posted in Brightspace</p> <p>Slides presented in class:<br/>Will be posted in Brightspace</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Practical Guide</b>                 | <p>Given the interactive nature of this course, attendance at classes is mandatory. Only very serious grounds for absence (such as illness accompanied with doctors note) are acceptable. Holidays and (paid or voluntary) work obligations do not count as acceptable reasons for absence. This is a full-time course with scheduled holidays. Unjustified non-attendance will result in expulsion from this course.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Assessment</b>                      | <p>The assessment includes three components.</p> <p>1) The first component is a team level online presentation of a case analyses of an existing company. Each team will analyse a practical company case provided to you and based on literature of a specific lecture session you will present your findings online in class (40%)</p> <p>2) The second component is a written report of a large firm in which you will analyse with your team the startup engagement activities this firm has put in place to renew itself. The report is an analyses of the company activities w.r.t. corporate venturing and an reflection of these activities by making use of literature. The report accounts for 40% of the final grade.</p> <p>3) The third component is an individual analyses of a startup that is involved in the corporate startup engagement activities of your team case company. It reflects on the motivation for the startup engagement from both startup and corporate perspective. It accounts for 20% of the final grade.</p>                                                                                                                                                                                                                                                                             |   |
| <b>Enrolment / Application</b>         | <p>All students across the various faculties of the Delft University of Technology can take this course.</p> <p>==&gt; You can directly enroll in Brightspace.</p> <p>==&gt; If you need to use the mytudelft app, you may see that you cannot register to this course. BUT that information is for the exam, which does not apply to this course, since there is no exam. Hence, you can register and enroll in Brightspace.</p> <p>==&gt; You may need approval from your exam committee, when you take this course within you elective space. But please register also in Brightspace and we can plan the course.</p> <p>==&gt; You can always take this course as an extra course, not part of your elective list, and it will be included in grade list.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Special Information</b>             | <p>Each student team will present during the lectures, actively participate during the lectures, complete assigned readings, read posted lectures, listen to thought leader presentations and submit written assignments when due.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |

| Course Contents                 | Turning Technology into Business (TTiB) aims to equip participants with a strong conceptual foundation to actively understand the dynamic process of technology-based entrepreneurship. Participants learn how business strategies are best formulated and how (through entrepreneurship) technology can create value. TTiB consists of seven lectures, introducing the theoretical backgrounds of technological, market and business analyses. A unique aspect of TTiB is that existing technologies (developed and patented by the TU Delft) are used as case subjects. The patent project is the focal point of the curriculum. Each group of 4-5 students will be assigned an original patent, and is expected to evaluate the commercial potential of this technology. This includes choosing promising applications (products) for the technology, and making recommendations for the most suitable business model to commercialize the technology. The patent project should provide a coherent and structured answer to the central question: which strategy is most likely to generate business from this patent? In addition to equipping participants with a thorough knowledge of the course subject, the section Technology, Strategy & Entrepreneurship (TSE) hopes that this course will be the starting point for a variety of university spin-offs in which the students will participate. To accommodate this, TSE offers the course TPM420A- Ready to Startup! |   |
| Study Goals                     | This course aims to equip students with a strong conceptual foundation to an active understanding of two domains:<br>(1) The dynamic process of technological innovation through concepts such as technology life-cycles, dominant design, disruptive technologies, Schumpeterian competition and the diffusion of innovations<br>(2) How business strategies are formulated and, through entrepreneurship, technology can create value. This multi-faceted process of technology commercialization process is addressed in terms of assessing technology position, discovering market opportunities, competitive analysis, appropriability and the various modes of entrepreneurship.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| Education Method                | 7 interactive lectures, participant-centered case studies, homework assignments, classroom assignments, individual group coaching.<br>Final Presentations in February.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| Literature and Study Materials  | Will be provided during the course                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| Assessment                      | Each group (of 4 or 5 students) writes a report on their findings, analysis and recommendations for the technology (patent) they used as a case for this course. On the Final Day, the group has to give a 10 minute oral presentation.<br>The report makes up 80% of the final grade. The final grade is summative.<br>This team grade will be modified according to the individual student's class contributions and his/her performance within the group (peer review).<br>There is no resit possibility.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| Enrolment / Application         | MAXIMUM CAPACITY is limited to 75 participants. Register on BrightSpace from October 1.<br>Because of the huge popularity of this course, there is a selection procedure which consists of pre-course assignments. One of these assignments is a letter of motivation: why do you want to participate in this course? Based on the motivation and the other pre-course assignments, the final selection of 75 participants will be made.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |

| <b>Summary</b>                         | <p>This course is offered twice in a year; First starting week 3/4 of Q1 and ending in Q2 and second starting week 3/4 of Q3 until end Q4</p> <p>Ready to Startup (RtS) is an elective master course that has been the crown jewel of entrepreneurial education at TU Delft for over two decades. Bringing together business experts and students eager to start companies, it has one simple goal: turn engineers into successful founders.</p> <p>RtS focuses predominantly on Business Strategy: gaining market traction, prototyping, growing the team, devising a financial plan and fundraising strategy, protecting IP, and foundational activities (setting up a company, sharing ownership, etc.)</p> <p>The course has the prerequisite that teams should be formed and have a business ideas that they want to further analyse and validate. It is meant for students who plan to start a company.</p> <p>After RtS, teams must be at the level required for YES!Delft incubation and Delft Enterprises investments.</p> |   |

| <b>Study Goals</b>                     | <p>At the end of the course, you will be able to</p> <ul style="list-style-type: none"> <li>- Reflect on your current business model and identify further necessary validation activities. Analyse market entry strategies and consider alternative models.</li> <li>- Learn how to negotiate, attract first users, and seek endorsement of stakeholders (such as investors and advisors).</li> <li>- Plan your core operational activities such as company foundation, IP protection, product development strategy and team development</li> <li>- Devise financial plans and appropriate fundraising strategies</li> <li>- Convey a convincing narrative of your business and be able to provide constructive feedback to other startup plans.</li> <li>- Demonstrate effective entrepreneurial behaviour by making swift decisions based on newly gathered information and adjusting your model accordingly.</li> </ul>                                                                                                          |   |
| <b>Education Method</b>                | <p>The course is spread out over 12 in-person sessions on Wednesday afternoon (13h30-17h30), where the core elements of a startup plan are presented. You work on assignments that are aimed at specific elements of the core startup plan, and you will by apply them to your startup project and present your findings during the course.</p> <p>In this way you make evident progress with your startup. The course combines state of the art business methods, translated to the needs of starting entrepreneurs, with consults from practitioners. Topics are discussed using case studies. You will present your progress, provide peer-feedback as well as receive advice from mentor experts. The course ends with a Final Day, consisting of a jury pitch and handing in your business plan.</p>                                                                                                                                                                                                                           |   |
| <b>Literature and Study Materials</b>  | Handouts and literature are available trough in Brightspace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Prerequisites</b>                   | Enthusiasm, entrepreneurial spirit and a good business idea.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Assessment</b>                      | <p>The course has 4 grading components.</p> <ul style="list-style-type: none"> <li>- Business plan: final report (40%)</li> <li>- Financial plan (10%)</li> <li>- Final Day performance (30%)</li> <li>- Overall progress: homework and attendance (20%)</li> </ul> <p>In general, you are only allowed to miss one lecture (with a valid reason submitted beforehand). Furthermore, we will monitor your progress during the course, with an official assessment halfway through the course.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |
| <b>Enrolment / Application</b>         | <p>Application process you need to register in advance to the course.</p> <p>Teams of students with clear ideas about a business they want to start supported with evidence that it addresses a need, will have priority to enter.</p> <p>==&gt; You can directly enroll in Brightspace.</p> <p>==&gt; If you need to use the mytudelft app, you may see that you cannot register to this course. BUT that information is for the exam, which does not apply to this course, since there is no exam. Hence, you can register and enroll in Brightspace.</p> <p>==&gt; You may need approval from your exam committee, when you take this course within your elective space. But please register also in Brightspace and we can plan the course.</p> <p>==&gt; You can always take this course as an extra course, not part of your elective list, and it will be included in grade list.</p>                                                                                                                                        |   |

| <b>Summary</b>                         | This course is designed to provide the student with a fundamental understanding of combustion processes and their application within advanced propulsion and power technologies. The goal is to reach a knowledge on how to improve the efficiency and mitigate pollutant formation of practical combustion systems. Since currently about 90% of the worldwide energy usage (e.g. transportation, electricity generation, heating) is provided by combustion, it is of the utmost importance to continue developing highly efficient combustion technologies with the lowest possible level of emissions. This is especially true for aero engines, whereby the use of combustion engines will continue in the foreseeable future.                                                                                                                                                                                                                                                          |   |

| <b>Study Goals</b>                     | <p>Write chemical equations and perform stoichiometry calculations.<br/>         Compute heating values of fuels, enthalpies of formation and adiabatic flame temperature.<br/>         Apply principles of thermodynamics to analyse reacting mixtures at chemical equilibrium.<br/>         Describe the fundamentals of the physics involved in premixed- and diffusion flames, laminar and turbulent.<br/>         Discuss the physics related to turbulent reacting flows and chemistry interaction.<br/>         Explain experimental measurement techniques and their role in understanding combustion.<br/>         Discuss critical mechanisms for improving the efficiency and reducing the emissions of air-breathing combustion systems.<br/>         Provide phenomenological descriptions of pollutant formation of conventional combustion systems.<br/>         Elaborate on the potential and challenges related to the use of alternative fuels in combustion systems.</p> |   |
| <b>Education Method</b>                | The course consists of weekly lectures and exercise sessions (practicals). In addition, the students are required to complete a project assignment and perform a laboratory exercise. The project assignment is relevant to practical combustion systems for aerospace applications. The laboratory exercise deals with the investigation of methane or hydrogen laminar flames. The students will gain hands-on experience in designing the experimental matrix, acquiring data, performing data analysis and writing a technical report. Both laboratory exercise and assignment are mandatory to be admitted to the oral exam.                                                                                                                                                                                                                                                                                                                                                            |   |

| <b>Study Goals</b>                      | This course deals with experimental and theoretical aspects of kinetics and reactor theory. After the course, the student will be able to:<br>- formulate kinetic models for mechanisms of complex reactions<br>- interpret kinetic studies and use reactor measurements to validate such models<br>- describe and model complex reactors with diffusion, dispersion and heat effects<br>- propose reactor designs based on kinetic insights                                                                                                    |   |
| <b>Education Method</b>                 | Lectures, homework (theoretical and computer based, often use of Python).                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Computer Use</b>                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Literature and Study Materials</b>   | Chemical Reactor Analysis and Design Fundamentals, James B. Rawlings & John G. Ekerdt, among others<br>+ Course Handouts                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Assessment</b>                       | The final grade is based on:<br>- Mid-term computer exam (35%);<br>- Final written exam (50%) that is based on theory (no coding/programming);<br>- Results of multiple exercises/homeworks that involve analytical problems and programming (15%).<br><br>Re-examination is possible for both the mid-term computer exam and final written exam. The weight within the final grade will be the same as in the first exam, 35% and 50 %, respectively. Only the exam with the highest grade will be considered for the final grade calculation. |   |
| <b>Permitted Materials during Tests</b> | During mid-term computer exam, course slides will be provided as supporting material.                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |

| <b>Expected prior knowledge</b>        | Microbial diversity, Black box kinetics of growth/ product formation, mass balances, transport phenomena.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Course Contents</b>                 | <p>The FTEB course is divided into two sections: Microorganism characterization (i), and Bioreactor design (ii). Microorganism characterization deals with stoichiometry, kinetics, and thermodynamics of microbial processes in the field of FT and EB. Specific attention is paid to identification of parameters and parameter sensitivity. The bioreactor design section includes batch, fed-batch and continuous bioreactor operation. Specific attention is paid to mixing, gas-liquid mass transfer, biofilm and other biomass retention based bioprocesses, as well as integration of different microorganisms in a single process configuration. All lectures are supplemented with practical examples.</p> <p>Students will elaborate in groups of 3-4 students a case study that should result eventually in the design of a bioprocess. As in the lecture series, students will first elaborate the properties of the microorganisms required and subsequently on the implementation in the bioreactor. Both parts of the case study will be discussed during poster presentations.</p> |   |
| <b>Study Goals</b>                     | <p>After this course the students are able to analyse and design fermentation and environmental bioprocesses.</p> <p>Most relevant transferable skills:</p> <ul style="list-style-type: none"> <li>- Problem solving</li> <li>- Teamwork</li> <li>- Communication</li> <li>- Responsibility</li> <li>- Time management</li> <li>- Presentation skills</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Education Method</b>                | Lectures and a case study                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |
| <b>Literature and Study Materials</b>  | Lecture notes, lecture slides and relevant scientific papers, which will be provided via Brightspace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |
| <b>Assessment</b>                      | Case study (group work) and exam (individual). The scores for the case study and the exam determine for 50% the final grade. The minimum exam score to pass is 5.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |

| <b>Expected prior knowledge</b>         | A BSc-course in Fluid Dynamics and Heat Transfer or in Transport Phenomena.<br>Basic math in 1D (Taylor series & ODE's) and in multiple-dimensions (vector analysis & PDE's) in the BSc-ME in ME or equivalent; basic understanding of Fourier series.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Course Contents</b>                  | <p>In this course the concepts &amp; mathematics of heat transfer in the engineering context are treated. Elementary understanding of the three modes of heat transfer: conduction, convection and radiation, will be briefly reviewed during the first two lectures.</p> <p>During the remainder of the course, the underlying physics will be emphasized and advanced mathematical formulations will be explained. A large focus in the course will be on the analysis of heat transfer in real-life integrated systems.</p> <p>Subjects in order of appearance:</p> <ul style="list-style-type: none"> <li>- A refresher on the underlying thermodynamics; energy, enthalpy, specific heats and phase change enthalpy.</li> <li>- A refresher on Conduction, Convection and Radiation.</li> <li>- Integral and differential energy balances in a 1-D and multiple-D continuum; absorption, reaction and dissipation as source terms.</li> <li>- Stationary conduction: cooling fins, multi-dimensional conduction and Laplaces equation; boundary conditions; analytical techniques &amp; numerical techniques; relaxation.</li> <li>- Phase change as a boundary phenomenon; melting and solidification fronts; Jakob number &amp; Stefan condition.</li> <li>- Instationary conduction: Fourier and Biot number; boundary conditions; analytical techniques &amp; numerical techniques; stability criteria.</li> <li>- Forced &amp; Free convection: Nusselt, Stanton, Prandlt &amp; Peclet numbers; Analysis &amp; the physics behind empirical correlations. The role of boundary conditions.</li> <li>- Radiation: radiative exchange between grey bodies, solar radiation, spectral characteristics, surface characteristics.</li> </ul> |   |
| <b>Study Goals</b>                      | <p>More specifically: The student is able to</p> <ol style="list-style-type: none"> <li>1. Distinguish between the different modes of heat transfer, and divide real-life systems into subsystems of elementary heat transfer modes in a qualitative and quantitative manner.</li> <li>2. For all of the below; give the physical interpretation of contributors and terms in balances in words and in sketches.</li> <li>3. Set up appropriate integral and differential energy balances for one- and multidimensional instationary conduction.</li> <li>4. Justify and apply simplifications and define the appropriate boundary conditions, including problems containing phase changes, i.e. Stefan conditions.</li> <li>5. Indicate mathematical solution strategies - both analytical and numerical, and apply those for standard geometries.</li> <li>6. Distinguish between different modes of convective heat transfer, and distinguish between the different physical mechanisms underlying empirical correlations.</li> <li>7. Estimate the magnitude of radiative heat transfer, distinguish between thermal and short-wave properties and spectral distributions, qualify and quantify the role of surface properties in real-life applications.</li> </ol> <p>Indicate implications when more detailed distributions of convective heat transfer are involved.</p>                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Education Method</b>                 | <ul style="list-style-type: none"> <li>- Lectures (2x2 hours per week) including experiments &amp; computer demonstrations.</li> <li>- After each lecture, book assignments, as well as custom assignments are given. Solutions will also be provided.</li> <li>- Weekly instruction hours (2 hours per week), during which students can discuss heat transfer problems with the instructors and/or during which instructors show how to solve an assignment.</li> <li>- Total number of contact hours: 6 hours per week.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Computer Use</b>                     | Computers are used for demonstrations of the lecture material during the course on the basis of TU Delft software. Students are invited to solve assignment problems using Matlab/Python/Maple - in some cases using given code, in others to start from scratch.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Literature and Study Materials</b>   | <p>Book: as a lead "Basic Heat and Mass Transfer" or just called "Mills" is used:<br/>A.F. Mills and C.F.M. Coimbra, 3rd edition, Temporal Publishing, ISBN 978-0-9963053-0-3 (available through MechEng study association 'Gezelschap Leeghwater'.</p> <p>The 2nd edition as by Pearson is out of print but still widely available; it is identical, but cheaper, and of lousy bookbinding quality. Derived versions like "Basis Heat Transfer", or "Heat Transfer" by Anthony Mills are nearly identical.</p> <p>Alternative books on heat transfer from your Bachelor's course (including Cengel &amp; Incropera) can be used as well, but you might want to check with the teacher; just bring it to the first Instruction if it's not standard.</p> <p>Lecture slides, short videos, Matlab scripts &amp; other study materials required will be provided via Brightspace.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |
| <b>Assessment</b>                       | The assessment consists of a hand-written closed-book exam, which you will have to complete in a pre-determined timeslot of 3 hours. You are allowed to bring the equation sheet posted on Brightspace; you are also allowed to make your own notes on the equation sheet itself.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Permitted Materials during Tests</b> | Only a non-programmable non-graphical calculator like Casio fx-82 MS is accepted.<br>One (1) equation sheet of 2 sides A4 can be taken and/or is provided.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |

| Course Language                  | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| Course Contents                  | A multiphase flow is the simultaneous flow of two or more immiscible phases of matter like gasses, liquids and/or solids. Such flows are important in many environmental and industrial processes and equipment. Examples are transport of food and production of pharmaceuticals, dredging, steel making, refineries and chemical- and nuclear power plants, sediment transport in rivers, cavitation, etc. This course, inspired by these processes, gives a broad introduction to the fundamental fluid mechanics of such flows. Topics include: classification of multiphase flows into dispersed and separated multiphase flows, relevant dimensionless numbers, stability of two-phase flows, modelling approaches, flow pattern maps, physics of droplets, bubbles, and particles; dynamics of particle-laden flow, effects of turbulence, experimental techniques and computational methods for multiphase flows. Examples will be given of the use of multiphase flow theory in industrial applications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |
| Study Goals                      | <p>At the end of this course the student is able to:</p> <p>1.a classify multiphase flows into separated and dispersed flows, including solid particles, gas bubbles and/or liquid droplets.<br/>1.b describe similarities and differences between the dynamics of solid particles, gas bubbles and liquid droplets.<br/>1.c formulate appropriate interfacial conditions for a fluid/fluid and a fluid/solid interface.<br/>1.d formulate relevant dimensionless numbers for multiphase flows.<br/>1.e explain the concept of dynamic similarity of multiphase flows.</p> <p>2.a understand the stability mechanisms of two-phase flows such as for instance a liquid jet in a gas (Rayleigh-Plateau instability) and two horizontal fluid layers in relative motion with each other (Kelvin-Helmholtz instability).<br/>2.b classify gas/liquid pipe flows into various flow patterns, dependent on the superficial gas and liquid velocities. And explain physical mechanisms for the transition between those patterns.</p> <p>3.a understand averaging methods to describe macroscopic behavior of multiphase flows.<br/>3.b apply simplified 1D (cross-section averaged) models.</p> <p>4.a describe the settling of a solid sphere under gravity in a stagnant fluid in terms of the Archimedes number and the fluid/solid mass density ratio.<br/>4.b describe possible interactions between solid particles and turbulence of the carrier phase.<br/>4.c describe the dynamics of characteristic particle-laden flows such as sediment transport through a pipe.</p> <p>5.a explain changes in the shape of a rising gas bubble in a stagnant fluid dependent on the Reynolds number, Eotvos number and Morton number.<br/>5.b estimate the terminal rise velocity of a bubble in a stagnant liquid from the equation of motion and an appropriate model for the drag.<br/>5.c give physical mechanisms for the breakup of bubbles/droplets in turbulence.<br/>5.d Explain the dynamics and mechanisms of cavitating flows</p> <p>6. describe the merits and shortcomings of different experimental methods for multiphase flows.</p> <p>7. describe the merits and shortcomings of different numerical methods for simulating multiphase flows.</p> |   |
| Education Method                 | Oral lecture                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| Assessment                       | Paper presentation (20%)<br>Written exam (80%)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |

| <b>Expected prior knowledge</b>        | WB2542 (thermofluids), ME45042 or ME45043 (advanced fluid dynamics), WBMT2049 T2 and T3 or similar (basic numerical analysis), some elementary programming skill (python, matlab or any other)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Course Contents</b>                 | <p>This is a course on computational fluid dynamics related to process and energy systems. Some elementary knowledge of numerical methods (discretisation of a derivative, numerical solution of ordinary differential equations) is assumed. See expected prior knowledge.</p> <p>In general the course will cover:</p> <ol style="list-style-type: none"> <li>(1) general conservation equations for mass, heat and momentum transport (Navier-Stokes equations)</li> <li>(2) numerical solution of multi-dimensional, stationary and time-dependent problems as encountered in low-speed CFD applications; <ol style="list-style-type: none"> <li>(2.1) numerical schemes for temporal discretization;</li> <li>(2.2) numerical schemes for spatial discretization;</li> <li>(2.3) imposition boundary conditions</li> </ol> </li> <li>(3) turbulence modeling</li> <li>(4) wave equation</li> <li>(5) numerical methods for high-speed (compressible) flows</li> <li>(6) high performance computing</li> </ol>                                                                                                                                                                                                                                                            |   |
| <b>Study Goals</b>                     | <p>After learning the content of the course the student will have the following capabilities:</p> <ol style="list-style-type: none"> <li>(1) Describe the two most popular methods in commercial CFD, finite differences and finite volumes</li> <li>(2) solve simple demonstrative problems in fluid flow and heat transfer by programming them in python or matlab, using finite differences and finite volumes</li> <li>(3) recognize the effects of numerical methods on the solution, such as numerical diffusion and numerical dispersion and to explain how to make these effects smaller</li> <li>(4) recognize numerical instability, to list several ways to avoid it and to analyze stability of simple methods analytically</li> <li>(5) solve fluid flow and heat transfer problems with the commercial CFD package Fluent or the open source CFD package OpenFOAM, which includes the following: set up a calculation, generate a simple grid, set appropriate boundary conditions, choose suitable discretisation, interpret and validate the results. Alternatively, in some cases, instead of using a commercial package, students can decide to write and validate their own code which they will use for calculating a fluid mechanics problem.</li> </ol> |   |
| <b>Education Method</b>                | Lectures, practical exercises (2x2 hours per week)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |

| <b>Study Goals</b>                     | After this course, you will be able to calculate phase and material properties in thermodynamic equilibrium for multi-phase and/or multi-component mixtures under ideal and non-ideal process conditions. You will be able to use equations of state and activity coefficient models, and to calibrate and validate those models using thermodynamic data.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
| <b>Education Method</b>                | Lectures, optional homework, review session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Computer Use</b>                    | homework assignments require scientific computing tools such as python, Matlab (or comparable) and basic programming methods such as for loops                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |

| <b>Course Language</b>                 | English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Course Contents</b>                 | <p>This course has two focus points: 1. agent-based modelling and 2. complex adaptive systems theory for ABM.</p> <p>Firstly, you will develop agent-based modelling skills by creating an agent-based model in a small group. This course is not meant as an introduction to basic programming, or a thorough introduction to Python/Mesa, but will rather focus on understanding the concepts of agent-based modelling and how model design choices affect the model created and how it can be used. Additional reading materials are provided for self-study in getting up to speed in basic programming, Python, and Mesa, as well as refresher exercises in the practical sessions. There will be a weekly lecture focused on agent-based modelling theory. In addition, there will be a weekly practical session focused on further developing your agent-based modelling skills.</p> <p>Secondly, there will be weekly lectures focusing on complex adaptive systems theory for agent-based models. Different characteristics of these systems, theoretical concepts and their applications will be discussed. Further reading will be offered to broaden your view and deepen your understanding.</p> |   |
| <b>Study Goals</b>                     | <p>After following this course, the student can:</p> <ol style="list-style-type: none"> <li>1. understand, modify and create agent-based simulations in Python with the Mesa library.</li> <li>2. identify relevant properties of a system and determine whether the system can be classified as a complex adaptive system or not.</li> <li>3. apply the definitions of complex adaptive system properties, as listed in the course topics, to different types of socio-technical systems and agent-based models</li> <li>4. reflect on the traditional engineering systems thinking from the complex adaptive systems-perspective and understand the implications of changing the traditional perspective.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Education Method</b>                | <p>This course consists of a series of lectures and a modeling project.</p> <p><b>Lectures</b><br/>Lectures introduce the theoretical concepts and their application for agent-based models and complex adaptive systems. All the lectures form the basis for the practical sessions, as well as the knowledge for the theoretical exam.</p> <p><b>Modelling project</b><br/>You will be creating an agent-based model in a small group. The project deliverable consists of the simulation code and a report documenting the problem statement, model design, performed experiments and data analysis.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |
| <b>Computer Use</b>                    | The course involves developing and experimenting with simulations in Python with the Mesa library.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Assessment</b>                      | <p>The final grade of the course is based 50% on the written theory exam and 50% on the modelling project (simulation + report).</p> <p>Both parts must be completed with a passing grade (at least 5.75) in order to pass the course.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |

| SEN1531                                | Design of Integrated Energy Systems                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 5 |

| <b>Expected prior knowledge</b>        | The SEN Energy Track modules taught in Q1 and Q2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Course Contents</b>                 | <p>Students are challenged to tackle an integrated energy system design problem in the form of a modelling project. Students are expected to come up with a creative (set of) design(s). Afterwards, they evaluate the expected performance of one or more of these designs as a future system or improvement to existing energy systems.</p> <p>The design challenge is complex and can only be met: 1) by taking into account dynamics on the short and long term, 2) by tapping into relevant knowledge on technological developments, 3) by using various quantitative analyses, 4) by considering various parts of the value chain, in terms of energy, mass, financial and information flows and 6) by relating and addressing the multi-actor and multi-level complexities.</p> <p>The quantitative analyses are to be executed with a set of quantitative tools, some used in earlier courses in the Energy Track, some developed by research institutes and companies, and others used in ongoing academic research at the faculty, made available for this course.</p> |   |
| <b>Study Goals</b>                     | <p>By the end of this course you should be able to:</p> <ul style="list-style-type: none"> <li>Apply the main steps needed for the design of integrated energy systems</li> <li>Discuss the design space of integrated energy systems, consisting of multiple carriers, multiple relevant geographical and temporal scales, and multiple sectors</li> <li>Conceptualize key processes that affect the performance of an integrated energy system that play out on short, medium and long term</li> <li>Select and use quantitative simulation models for designing integrated energy systems</li> <li>Reflect on aspects that are placed outside the design space, i.e. the relationship to food, water, built environment, etc.</li> </ul>                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Education Method</b>                | <p>The core task within this module is to carry out a group project in which an integrated energy system is designed and evaluated by using various models. Groups of students use various models and interact with model experts: teachers, researchers but also various companies are involved.</p> <p>There are lectures and visiting hours for debating modelling choices and details, but also for reflection and debate on modelling and simulation. Students do peer review and present their results for each other and for model experts. This enables academic reflection as well as direct interaction with the potential work field.</p>                                                                                                                                                                                                                                                                                                                                                                                                                             |   |
| <b>Literature and Study Materials</b>  | <p>A reader is provided with the approach applied and descriptions of all the models available.</p> <p>Various energy transition models and simulations are made available for use in the projects. Some were introduced in earlier courses, some are extracted from ongoing energy research at the TU Delft, and others come from various companies in the field that do their own energy system modelling and analysis.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
| <b>Assessment</b>                      | <p>An individual grade will be assigned on the basis of the following inputs:</p> <ul style="list-style-type: none"> <li>- The group project report that describes the integrated energy systems design including an assessment of its expected performance</li> <li>- An individual appendix with a personal reflection and description of contribution to the project</li> <li>- The contribution to peers, through peer review and discussions</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |

| <b>Expected prior knowledge</b>        | <p>PLEASE NOTE: As of academic year 2025-2026 this course will be DISCONTINUED. The (identical) course SEN154a in Q4 will be open as elective.</p> <p>Students need to have sufficient prior knowledge in the fields of energy technology, economics and policy. They should be familiar with concepts such as intermittency, Carnot efficiency, BEVs, energy vs power, network externalities, sunk costs, fixed and variable costs, ROI and NPV.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Course Contents</b>                 | <p>This module addresses the changing technological and societal characteristics of future energy systems.</p> <p>Contemporary energy systems are confronted with technical and socio-economic developments, such as the climate crisis, renewable technologies, ICT-based control innovations, energy scarcity and environmental concerns. These changes will affect operational roles and responsibilities, market structures and actors interests, and business models for energy services. Moreover, they may require new forms of governance to ensure reliable operations that meet socio-economic performance criteria. The course discusses the technical and socio-economic aspects of future energy systems, dealing with issues like the integration of new forms of distributive solar PV or large-scale off-shore wind energy into existing networks, various forms of sustainable energy sources, alternative energy carriers, storage methods, and the dynamics of transition processes.</p> |   |
| <b>Study Goals</b>                     | <p>At the end of this module the students know:</p> <ul style="list-style-type: none"> <li>- Which technical and societal developments can be expected in the energy sector.</li> <li>- How new energy technologies and societal developments may reshape operational roles and responsibilities, energy markets and business models, and governance arrangements.</li> <li>- How to compare and analyze future energy systems, develop plausible transition paths towards them, and estimate the potential of new energy technologies within various scenarios.</li> </ul> <p>At the end of this module the students can:</p> <ul style="list-style-type: none"> <li>- Formulate descriptions of the technical and societal characteristics of future energy systems.</li> <li>- Make a conceptual design of an energy system, given certain demands.</li> <li>- Formulate a balanced advice on issues in the energy sector.</li> </ul>                                                                    |   |
| <b>Education Method</b>                | Interactive sessions, self-study, online & class exercises, class discussion. Reading material: scientific papers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Assessment</b>                      | Individual written exam (on the computer, on campus) consisting of essay questions. Any reference material on paper and/or in pdf format on memory stick is allowed; no internet access other than to the examination site is allowed. Sufficient participation in the online exercises (one exercise may be missed) is a prerequisite for taking the exam, but not for the resit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |

| <b>Course Contents</b>                | <p>Environmental Ethics is an elective course that TU Delft students, or study abroad/exchange students, from any degree program are invited to take. No prior knowledge or experience with ethics or philosophy is assumed.</p> <p>This course introduces key ideas, arguments, and concepts from Environmental Ethics, the area of philosophy concerned with the nonhuman world. Through the weekly meetings, readings, and course assignments, we'll consider questions like:</p> <ul style="list-style-type: none"> <li>--- Do nonhuman entities (plants, animals, ecosystems, etc.) have moral value?</li> <li>--- Is there really such a thing as 'nature,' existing separately from humans?</li> <li>--- What is biodiversity, and how should we conserve it?</li> <li>--- Who benefits when environments are protected, and who is harmed?</li> <li>--- What makes climate change a moral issue, and what should we do to address it?</li> <li>--- Are we living in the Anthropocene, and if so, what does that mean about how we should live?</li> </ul> <p>We'll also think about what environmental ethics means for engineers specifically, asking questions like:</p> <ul style="list-style-type: none"> <li>--- How can thinking environmentally attune us to others in space and time, and what responsibilities do engineers have to do this?</li> <li>--- How do other traditions of thought (feminism, indigenous philosophies) consider human/nonhuman relations, and what might these, alongside environmental ethics, contribute to how engineers and engineering practices think about the nonhuman world?</li> </ul> <p>Students are encouraged to pursue their own personal and/or professional interests throughout the course. Students choose the topic of their final assignment.</p> <p>This course can be taken for 3ECTS, as described below, or for 5ECTS, with the addition of a course paper. (For the 5ECTS option, please see course TBM013B)</p> |   |
| <b>Study Goals</b>                    | <ol style="list-style-type: none"> <li>1. Describe key concepts in environmental ethics</li> <li>2. Apply environmental ethical concepts and ideas to new problems, topics, media</li> <li>3. Understand and analyze the social and ethical dimensions of climate change and related issues of mitigation, adaptation, and climate engineering</li> <li>4. Work in groups to develop, feedback, and present a small project (in tutorials)</li> <li>5. Critically reflect about your relation to the environment (as an engineer and person)</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |
| <b>Education Method</b>               | <p>This course is held in person.</p> <p>The course meets weekly (weeks 4.1-4.7) with two required tutorials in weeks 4.4 &amp; 4.6.</p> <p>All meetings are a mix of lecture, discussion, and in-class activity. Most weeks reading or viewing is required ahead of the meeting.</p> <p>Attendance of the weekly meetings is strongly encouraged: quizzes are given most weeks, and participation is also graded as part of the course (see assessment for more information).</p> <p>all course materials will be provided via Brightspace.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Literature and Study Materials</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Prerequisites</b>                  | none                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Assessment</b>                     | <p>Assessment:</p> <p>The 3ECTS course is assessed through several parts/assignments, described below. There is no exam.</p> <ul style="list-style-type: none"> <li>25% - weekly quizzes (in class, no option to retake missed quizzes. Best 5 out of 6, graded individually)</li> <li>25% - written responses (individual)</li> <li>25% - tutorial activity (designed and presented in small groups in course tutorials, graded per group)</li> <li>10% - stakeholder feedback</li> <li>15% - participation (engagement in class meetings and/or in Brightspace discussions, feedback on other groups' work in tutorial, graded individually)</li> </ul> <p>Final Grades:</p> <p>The final grade is calculated according to the weights indicated above. To pass the course, the final grade has to be 5.75 or higher. All partial grades have to be 5.0 or higher.</p> <p>There is no resit because there is no exam. However, partial grades are valid for all parts and can be carried from one year to the next if students do not pass or complete all parts of the course. This is only allowed for insufficient or incomplete grades, not to improve passing grades.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |

| <b>Course Contents</b>                 | <p>Cost-benefit analysis (CBA) has become a widely used (often mandatory) tool for public policy decision making on infrastructural projects or environmental and climate policies. Through CBA, the potential current and future gains and losses of proposed projects, programmes and policies are identified, and then converted into monetary units in order to make them comparable with alternatives. In essence, certain decision rules of CBA help determine whether the project or programme under consideration is desirable from a societal perspective.</p> <p>CBA comprises not only the private costs and benefits, which individual actors or entities (e.g. project, firm, industry) take into account in their cost calculations and decisions but also the wider social costs and benefits. Many of the social costs and benefits are of a non-financial nature. For instance, in the construction of a new highway, besides the financial aspects such as toll revenues or construction costs, it is imperative to also assess the non-financial benefits such as increased safety (lives saved, accidents avoided) and non-financial costs such as the environmental damage (noise, soil sealing, loss of natural habitat).</p> <p>Because CBA evaluates policy and/or project proposals from the point of view of the public interest, the market prices used in CBA are corrected for possible market distortions or failure (for example, unpriced environmental damage). Nevertheless, the application of CBA faces difficulties and limitations that need to be taken into account. What discount factors are to be applied to determine the present and future costs and benefits of a policy proposal? Why and how do the private benefits and costs of a policy proposal differ from the social benefits and costs? How, if at all, can environmental damage, or human health and life risks be expressed in monetary units? How can market prices be adjusted to account for external effects? How can alternative measures of welfare be used to identify the benefits and costs of a project?</p>                                                                                                                                                                                                                                                                                                                         |   |
| <b>Study Goals</b>                     | <p>At the end of the course, students are expected to acquire the ability to:</p> <ul style="list-style-type: none"> <li>- recognise contexts where CBA is a useful methodology to assess a project, along with its limitations.</li> <li>- understand the micro-economic foundations of CBA.</li> <li>- criticise and defend the CBA methodology from an ethical perspective.</li> <li>- recognise the different perspectives of CBA.</li> <li>- apply all the steps necessary to conduct a simple analytical CBA with given data.</li> <li>- interpret the results of a cost-benefit analysis.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |
| <b>Education Method</b>                | Lectures and in-class exercises                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| <b>Course Relations</b>                | This master-level course is part of the TPM Faculty's Economics & Finance specialization/elective package, but it can also be selected as a standalone elective course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| <b>Assessment</b>                      | <p>There are two mandatory types of the assessment and a formative assessment:</p> <ol style="list-style-type: none"> <li>1. An individual essay (30%) mandatory</li> <li>2. An individual written exam (60%) mandatory</li> <li>3. Two mini assignments (group work) (10%) formative</li> </ol> <p>Rules for the individual essay: The essay is mandatory. The minimum grade of the essay required for passing the course is 5.8. There is one resit attempt. The maximum grade students can achieve in the second attempt for the essay is a 6.0. Note that the second attempt for the essay is only meant for students who do not pass and NOT intended for students who have passed nor new students who would like to enrol in the course after the first attempt. Further details about the individual essay will be provided later in Brightspace.</p> <p>Rules for the exam: The final exam is mandatory and takes the form of a written exam. The minimum grade of the exam required for passing the course is 5.8. There is one resit attempt.</p> <p>Rules for mini assignments: Each of the two mini assignments is worth 5% of the grade. The mini assignments consist of a set of questions to be solved and submitted by students in groups at the specified deadline. Submissions of group works after the deadline are not accepted. For the purpose of the mini assignments, students are assigned to groups of approximately 5 students. The mini assignments are intended as a formative assessment. For this reason there is NO resit attempt. There is no minimum requirement for the mini assignments either. (If a group decides not to hand in any of the assignments the maximum number of points they can achieve is 90%.)</p> <p>Rules for the final grade: The final grade required for passing the course is 5.8. The final grade is established as the weighted average of the individual assessments calculated as:<br/> <math>\text{GRADE}_{\text{essay}} * 0.3 + \text{GRADE}_{\text{exam}} * 0.6 + \text{GRADE}_{\text{miniassignment}} * 0.1</math>.</p> <p>Only the final grade will be entered in OSIRIS. Please register for the exam in OSIRIS on time (see: <a href="https://www.tudelft.nl/en/student/education/courses-and-examinations/examinations/registration-for-examinations">https://www.tudelft.nl/en/student/education/courses-and-examinations/examinations/registration-for-examinations</a>).</p> |   |
| <b>Elective</b>                        | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |

| <b>Course Contents</b>                 | <p>This course offers theoretical fundamentals of international entrepreneurship. You create a case study of an existing start-up (born global) analysing its entrepreneurial journey and how it fits the broad technology development process. This course helps you prepare for a wide array of career paths, from starting or joining an international start-up to academic research on the topics of International entrepreneurship.</p> <p>Throughout the course you will develop the skills to analyse the emergence of innovative business opportunities and how these are exploited. Using proven content, methods, and models for new venture opportunity assessment and analysis, you will learn how to analyze the commercial potential of implementing new technologies either by analyzing social challenges or analyzing the value of technology for various user applications. Innovation, opportunity recognition, strategic decision making, business modelling, internationalization marketing and growth stages of high-tech start-ups are core elements of the course.</p> |   |
| <b>Study Goals</b>                     | <p>Upon finishing the course you will be able to:</p> <p>LO 1 Analyse and apply the innovation process within startup firms and compare it to established firms.<br/> LO 2 Describe and apply opportunity identification process based on opportunity analysis canvas.<br/> LO 3 Identify and analysis international opportunities across different markets.<br/> LO 4 Describe and apply the born-global start-up growth process.<br/> LO 5 Demonstrate understanding of the entrepreneurial ecosystem, the main stakeholders and their role in the start-up process.<br/> LO 6 Explain and apply methods for developing business models for high-tech start-up and analyse how they can change over time.<br/> LO 7 Describe and analysis the barriers to internationalization and evaluate the niche strategies.<br/> LO 8 Analyse an existing born-global start-up and present your findings about the dynamics of its growth.</p>                                                                                                                                                         |   |
| <b>Education Method</b>                | <p>The course is organized into 8 sessions (8 weeks) into 3 learning blocks with an assessment at the end of each. Each session consists of a mixture of lecturing, and discussions of cases, literature and assignments, and presentations. Assignments provide you with opportunities to integrate and apply learning from each learning block. A final presentation and final report based on a startup-case analyses provided by a team of students will close the course.</p> <p>Book:<br/> Trott, P., Hartmann, D., Scholten, V., van der Duin, P., &amp; Ortt, J. R. (2015). Managing technology entrepreneurship and innovation. | <b>Expected prior knowledge</b>        | No prior knowledge is required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |
| <b>Summary</b>                         | <p>In this course, you do not study entrepreneurship, you become an entrepreneur. Working in a team, you identify a business opportunity using emerging digital technologies. Applications can range from mobility, cyber security to predictive maintenance etc. You will test its validity, and build a viable business model a roadmap from an idea to an innovation-driven company. On this journey, you will be coached by lecturers and learn practical insights from guest lecturers from industry and the startup ecosystem. After this course, you will be able to proactively assess the merit of a technology startup, whether you want to build one or join one.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Course Contents</b>                 | <p>You will focus on information and computing technologies (e.g AI, big data, blockchain) that are transforming traditional industries and societies at large.</p> <p>To analyse the opportunities for new startups we focus on entrepreneurial tools such as the opportunity canvas; value proposition development and customer empathy mapping, market segmentation and value chain analyses and the initial operations to develop a minimum viable product.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |
| <b>Study Goals</b>                     | <p>Develop a business Idea by identifying a relevant economic problem or unmet need that is addressed by digital solutions, and advanced information and computing technologies.</p> <p>Conduct primary and secondary market research in order to rigorously test the value of your business idea and to identify an appropriate market segment</p> <p>Analyse the competitive landscape and devise your products competitive advantage, given specific challenges of protecting IP in the digital world. Create a blueprint of your product.</p> <p>Identify relevant stakeholders in your startups ecosystem, outline the go-to-market strategy, and assess profitability. Understand how these strategies adjust when trying to implement your solution in well-established systems of traditional industries.</p> <p>Integrate and convincingly present all the aspects of your business idea into a coherent business model supported by collected evidence.</p> <p>Emulate effective entrepreneurial behaviour by rapidly gathering new information and acting on it by improving the business model.</p> <p>Evaluate your entrepreneurial skills and motivate constructive feedback through peer reviewing</p> |   |
| <b>Education Method</b>                | <p>You will work in teams which are formed in the first sessions of the course. One aspect of a startup will be discussed each week and you will apply into your own projece immediately. You will present your work, provide peer-feedback as well and receive advise from coaches. The course ends with a jury pitch and a 4-pager of the business proposition.</p> <p>Team coaching will help you validate the idea and we provide individual coaching for personal entrepreneurial development.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |
| <b>Books</b>                           | <p>The primary textbook for this course is an organic handbook by Bill Aulet: Disciplined Entrepreneurship: 24 Steps to a Successful Startup. Wiley, 2023.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| <b>Assessment</b>                      | <p>The assessment is based on your project.</p> <p>It includes class assignments and participation (40%), final business model report (30%), online pitch presentation (15%), and team evaluation (15%). Participation and Peer Evaluation grades pertain to each student. Class assignments, final business report, and pitch presentations are evaluated on a group level.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| <b>Enrolment / Application</b>         | <p>All students across the various faculties of the Delft University of Technology can take this course by directly enrolling into Brightspace. No other means of registration, such as the app MyTuDelft are needed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |

| <b>Course Contents</b>                 | <p>A sustainable business idea is a product, a process or a service that enables sustainability, where sustainability is defined as the capacity for the biosphere and human civilization to co-exist indefinitely.<br/>The course stimulates and assists students in creating a sustainable business idea and assessing the feasibility and the market potential thereof by testing it against prospective customers and key players in the specific industry of application.<br/>Students work together in teams which will be self-formed or if needed formed by the instructor with the aim to create optimal diversity.<br/>Each team needs to come up with an original sustainable startup idea, or a sustainable business idea connected to pressing sustainability challenges of our day.<br/>Each sustainable business idea must be technology-based we do not accept apps and definitely no consulting of any kind.</p> <p>The course consists of two interconnected parts:<br/>1. Students attend lectures and workshops.<br/>2. Teams carry out a feasibility study for their sustainable business idea.</p> |   |
| <b>Study Goals</b>                     | <ul style="list-style-type: none"> <li>- Students learn how to assess the market potential of a sustainable product, process, or service.</li> <li>- Students gain basic knowledge on the commercialization of a sustainable business idea.</li> <li>- Students learn about different business models and gain insight in how to choose a market opportunity in the value chain.</li> <li>- Students gain practical knowledge about starting up a business.</li> <li>- Students experience real business practice by feedback from both lecturers, external advisers and experienced entrepreneurs in particular.</li> <li>- Students learn how to give a convincing business presentation.</li> <li>- Students learn to be critical about their own business case and those of their fellow students.</li> <li>- Students learn how to make a proper evaluation of the feasibility of their idea and business plan.</li> </ul>                                                                                                                                                                                          |   |
| <b>Education Method</b>                | <p>We offer a mix of lectures, case studies, and coaching sessions.<br/>The class is fast-paced and interactive.<br/>Many of the classes are in the form of coaching sessions and team exercises, therefore class attendance is mandatory.<br/>Lectures and online content will provide students with general guidelines for each business model milestone.<br/>Depending on availability, we will bring guest speakers, usually entrepreneurs, with experience in the energy and sustainability industry.<br/>Team coaching will help students to validate their ideas and develop their entrepreneurial skills.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |

| Course Contents                 | <p>In this course, you do not study entrepreneurship, you become an entrepreneur. Working in a team, you identify a business opportunity, test its validity, and build a viable business model a roadmap from an idea to a sustainable innovation-driven company. On this journey, you will be helped by guest lecturers from industry and the startup ecosystem. After this course, you will be able to proactively assess the merit of a technology venture, whether you want to build or join one. While the starting point is tackling the societal and market problems and unmet needs, the solution ideas must be based on substantial scientific advances and cutting-edge engineering that can be used to build competitive advantage in the market (via patent for example). Feel free to bring your own ideas and technologies, but you do not need one to enjoy this course. All you need is curiosity about building a business on solid technological foundations.</p> <p>Fast-paced and interactive, the class consists of mostly coaching sessions and team exercises, therefore class attendance is very important. Online content and short in-class lectures provide you with general guidelines for each business model milestone. There will be weekly assignments, building blocks to a full-fledged business model. Final deliverables include: a logbook of primary market research (yes, youll do interviews!), business model report, and a pitch presentation in front of a jury of startup professionals.</p> <p>You start the course with forming teams around a market problem or unmet need. Then, you gradually build a business model, mainly by answering questions such as: Who are my customers and what value do I create for them? How big is this market? How should my minimum viable product look like? How do I build a competitive advantage in the market (e.g. by patenting)? How will I market and deliver this product to the customer? Can this be a profitable business? You seek answers through customer, stakeholder, and expert interviews, by developing step-by-step interview protocols and executing them.</p> |   |
| Study Goals                     | <ul style="list-style-type: none"><li>- Develop a business idea based on a relevant economic problem or unmet need.</li><li>- Conduct primary and secondary market research in order to rigorously test the value of your business idea and to identify an appropriate market segment</li><li>- Develop a blueprint of your product and map its position in a competitive landscape.</li><li>- Identify relevant stakeholders in your startups ecosystem.</li><li>- Formulate a business model and a go-to-market strategy.</li><li>- Perform initial assessment of the profitability of the business idea.</li><li>- Integrate and convincingly present all the aspects of your business idea into a coherent business model supported by collected evidence.</li><li>- Emulate effective entrepreneurial behaviour by rapidly gathering new information and acting on it by modifying the business model.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
| Education Method                | <p>The course offers a mix of online lectures, case studies, and coaching sessions. Depending on availability, we will bring guest speakers with relevant industry and entrepreneurial experience.</p> <p>Team coaching with industry experts will help you validate the idea and we provide individual coaching for personal entrepreneurial development.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |
| Assessment                      | <p>The grade is based on: final group report, final presentation, midterm presentation and short progress report, peer evaluation and active participation in the course. Also, to pass the course, participation and regular submission of class assignments is necessary. Active participation and peer evaluation are assessed for each student, the rest is evaluated on a group level.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |
| Enrolment / Application         | <p>All students across the various faculties of the Delft University of Technology can take this course by directly enrolling into Brightspace. No other means of registration, such as the app MyTuDelft are needed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |

| <b>Course Contents</b>                | <p>This course considers the challenges faced by operators when operating and planning electrical power systems in the face of uncertainty balancing cost, reliability and environmental objectives. The course specifically focuses on quantitative modelling of uncertainty and performing quantitative risk assessments to support decision making.</p> <p>The course starts with a description of uncertainties that are important to power system operation and planning, and common metrics for system performance. Case studies in power system reliability and system capacity planning are introduced. In this context, various approaches to modelling uncertainties are introduced. Historical data is used to create models for component reliability. Students will learn how to compute system level reliability measures from bottom-up reliability models, using enumeration approaches and Monte Carlo sampling. Special attention is given to the estimation sample variation using the normal assumption and bootstrap approaches. Finally, the impact of risk metrics and decision criteria on decision making is discussed, thereby giving students insight into the whole chain from measurements to models to model-based decision making.</p>                                                                                          |          |
| <b>Study Goals</b>                    | <p>After completing this course, students will be able to:</p> <ol style="list-style-type: none"> <li>1) Calculate commonly used reliability measures and interpret their values in the context of Western European power systems.</li> <li>2) Construct and use Markov models for component reliability.</li> <li>3) Follow prescribed steps to construct reliability models from failure and repair data.</li> <li>4) Calculate the reliability of model systems on the basis of constituent component models.</li> <li>5) Implement Monte Carlo sampling and bootstrapping methods to estimate risk measures and the accuracy of such estimates.</li> <li>6) Compare model representations of uncertainty, and illustrate these in the context of power system reliability and planning.</li> <li>7) Evaluate different grid development options using quantitative risk assessment and discuss how a decision for one option depends on the choice of risk measure and decision criterion.</li> </ol>                                                                                                                                                                                                                                                                                                                                                      |          |
| <b>Education Method</b>               | Lectures (8x 2 hours); Computer labs (8x 2 hours); additional exercises for self study.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |          |

| <b>Assessment</b>                     | <p>Completion with 'pass' mark of a small group assignment and computer lab exercise (with basic report) is required. The final grade is determined by a written exam (80%) and computer exercise with accompanying report (20%). A minimum mark of 5.0 must be attained for each component to pass. Component marks are given on a scale 0-10, rounded to the nearest 0.1 increment; the final grade is rounded to the nearest 0.5 increment.</p> <p>One resit opportunity is provided for the written exam. One repair opportunity is offered for the pass/fail assignments (two weeks after the initial deadline, unless agreed otherwise). A repair opportunity will also be offered for the graded exercise if the initial mark was between 4.0 and 5.7 (out of 10), with a deadline 3 weeks after the initial grade is announced. A maximum mark of 6.0 out of 10 can be obtained for the exercise through this route. If a student passes only part of the course in this academic year, all parts need to be retaken.</p> <p>In case of an insufficient final result, repair options may exist in accordance with Article 17A Times and number of examinations, sub 1, of the Teaching and Examination Regulations 2024-2025.</p> <p>Disclaimer: information may change depending on unforeseen circumstances or measures (see: TER Art 2, sub 5).</p> |          |

| <b>Expected prior knowledge</b>        | Basic programming skills in any programming language, elementary knowledge of probability theory and statistics                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Summary</b>                         | This course will teach students the fundamentals of Machine Learning and how these can be applied to electrical engineering applications. After this introduction to Machine learning covering the fundamentals, the students can make use of this course by either taking advanced ML courses or by applying their learnings to detailed track courses.                                                                                                                                                                                                                                                                                                                                                                        |   |

| <b>Course Contents</b>                 | This course presents the basic principles of High Voltage technology and practical application of this knowledge in the power industry. Proper design of High Voltage components requires knowledge and insight of electric fields and breakdown mechanisms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |
| <b>Study Goals</b>                     | By the end of the course students will be able to: <ul style="list-style-type: none"> <li>- Demonstrate insight in the relation between charge, electric field and voltage</li> <li>- Identify and calculate capacitive voltage distributions</li> <li>- Calculate and analyze electric fields using analytical and numerical methods</li> <li>- Describe the breakdown mechanisms in different insulation materials and the phenomena leading to this</li> <li>- Explain methods of field grading and field control</li> <li>- Describe impulse breakdown phenomena (for example lightning)</li> <li>- Evaluate the effect of combinations of materials and interfaces on electric fields</li> <li>- Remember maximum permissible field strengths in different materials and configurations</li> </ul> |   |
| <b>Education Method</b>                | Lectures, demonstrations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |
| <b>Literature and Study Materials</b>  | Kreuger, F.H., Industrial High Voltage. | <b>Course Contents</b>                 | IMPORTANT: as of the academic year 2024/2025 this course has been replaced by OE44170 - 'Offshore Renewables Technologies' (5 EC points)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
| <b>Study Goals</b>                     | This course will introduce the students to the technical aspects and detailed understanding of ocean energy technologies (including floating wind, wave, and tidal current). The course combines lectures on offshore renewable energy technologies, CO2 and energy storage. The students will participate in a realistic project teamwork with young industry coaches and working on actual cases with stakeholder and risk management assessment, modelling and energy extraction analysis from the offshore environment, including an overview of the project development of safe and reliable offshore energy technologies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
|                                        | by successfully completing the course you should be able to: <ul style="list-style-type: none"> <li>Explain and describe the physical principles of energy conversion for wave energy and tidal stream .</li> <li>Compare different marine renewable energy sources based on calculations of their energy content. A few examples of such sources include offshore wind, ocean waves, tidal currents</li> <li>Identify and evaluate the design considerations and technical challenges of offshore wind, wave and tidal energy technologies.</li> <li>Generate future-proof solutions for offshore energy projects with a focus on minimization of the CO2 footprint.</li> <li>Define technical, political, contractual, economic and operational constraints imposed on industrial projects throughout its entire life cycle.</li> <li>Explain the crucial importance of uncertainties and economics in the decision process in the course of developing a project.</li> <li>Apply basic project analysis and management techniques.</li> <li>Accommodate conflicting requirements in an offshore design environment.</li> </ul>                                                                                                                        |   |
| <b>Education Method</b>                | Lectures and project teamwork with industry coaches.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |
