Schakelopleiding CME 2024

CME5050	Technical Writing CME bridging programme	2
Responsible Instructor	Drs. J.A. Weitenberg	
Instructor	M.J.Y. Wackers	
Contact Hours / Week x/x/x/x	2hrs	
Education Period	3	
Start Education	3	
Exam Period	3 4	
Course Language	English	
Course Contents	This course is meant for students in the bridging programme of the CME master programme who have finished their bachelors programme, but have not had a technical writing course in their bachelor education (e.g., Civil Engineering students from TU Delft, and Civil Engineering students from Dutch universities of applied sciences (hogescholen). Modern engineers are required to possess excellent communication skills. Not only do they need to know their business, but they also need to know how to communicate this business to other experts, decision makers, and implementers. They need to be able to write accessible technical reports and proposals and to hit the correct tone in professional correspondence. Prospective engineers will benefit from this course, which focuses on both the quality of the text and the writing process itself. The following subjects will be dealt with: - a systematic approach to writing; - requirements for technical reports and their components; - structuring texts on several levels; - writing convincingly; - writing "proper and appropriate" language; - reading and referring to scientific literature; - referencing. Five lectures and a teachers consultation will be used for instruction, feedback, and practice. Students will be required to hand in several assignments while they are working on the technical report that needs to be written to complete the course. Attendance is mandatory.	
Study Goals	After completing the course, the student will be able to: - Work systematically and efficiently on a writing task; - Write a technical text which is accessible to the target audience, including the use of attractive visuals; - Form an argumentative structure in their text, using sources when necessary; - Apply basic style rules for referring to sources, figures, and tables; - Structure a technical report using standard sections (e.g. introduction, conclusion, summary/abstract); - Write a readable technical text in English, using paragraphs and appropriate style, grammar, and spelling.	
Education Method	Lectures, teachers consultation, writing assignments, and peer feedback.	
Assessment	Written final report.	
Expected prior Knowledge	n.a.	
Academic Skills	See Study goals.	
Literature & Study Materials	Brightspace TU Write	
Judgement	For more information on grading, see article 14 in the Rules and Guidelines (RGBE): https://www.tudelft.nl/en/student/faculties/ceg-student-portal/education/education-information/educational-rules-and-regulations	
Permitted Materials during Exam	n.a.	
Collegerama	No	

CT2023	Programmeren in Python	3
Responsible Instructor	Dr. V.L. Markine	
Contact Hours / Week x/x/x/x	2/2/2/2	
Education Period	1 2 3	
Start Education	1 2 3	
Exam Period	1 2 3	
Course Language	Dutch	
Collegerama	No	

CTB2400	Numerical Mathematics	3
Responsible Instructor	Prof.dr.ir. C. Vuik	
Co-responsible for assignments	Dr.ir. D. den Ouden-van der Horst	
Education Period	4	
Start Education	4	
Exam Period	4 5	
Course Language	Dutch	
Expected prior knowledge	analysis, calculus, linear algebra, differential equations	
Parts	During the lectures the most important points are highlighted. Motivation for the various parts of the lectures/book are given. Exercises are discussed and explained. There is a lot of material available on the corresponding website for information, motivation, exercises and old exams.	
Summary	After the course the student is able to design a simple numerical method, analyses it and implement it. Furthermore, the student should be able to consider the results of numerical methods, analyse them and explain their behaviour. An oral and/or written report of these findings can be given by the student.	
Education Method	Lecture

Exam Period	none	
Course Language	English	
Parts	- Develop and execute a project plan; - Make a project analysis, including problem analysis, site analysis and stakeholder analysis and definition of the project scope; - Develop a design proposal; go through the full design cycle for a given case; - Realize the integration of the different engineering disciplines; - Elaborate specific parts or aspects; - Oral and written presentation of the design proposal.	
Summary	Integration and application of different civil engineering disciplines in a design project setting.	
Course Contents	Infrastructure projects are characterized by the complex setting in which they take place and the broad spectrum of involved technical disciplines: road, rail, structures, water, ground, etc. In other words: this kind of projects are multi-disciplinary and integral by definition. The planning and design process are executed in groups using a case assignment from practice. Systems engineering is an important method in this course. Subjects: - Project management, - Design approaches, - Structural engineering, - Systems engineering, - Economic and social aspects, sustainability, use and environment. - Risk management.	
Study Goals	- Develop and execute a project plan; - Develop a design proposal; go through the full design cycle for a given case; - Realize the integration of the different engineering disciplines; - Elaborate specific parts or aspects; - Oral and written presentation of the design proposal.	
Education Method	Project course with supporting lectures	
Course Relations	This course builds upon first year course CTB 1220 "Integraal Ontwerp en Beheer" and more generally upon knowledge gained in the first and second year of the Bachelor CT. This course uses and is relevant for all civil engineering disciplines.	
Literature and Study Materials	Will be made available through BrightSpace	
Assessment	Group reports (project plan, project analysis, design documents, final report), group presentations, and individual reports are assessed.	
Expected prior Knowledge	Third year BSc Civil Engineering	
Academic Skills	Collaboration in teams, presenting, reporting, information skills, awareness of societal impact of infrastructure projects	
Literature & Study Materials	Will be made available through Brightspace	
Judgement	For more information on grading, see article 14 in the Rules and Guidelines (RGE): https://www.tudelft.nl/en/student/ceg-student-portal/education/education-information/educational-rules-and-regulations	
Permitted Materials during Exam	n/a	
Collegerama	No	

IFEEMCS010400	Linear Algebra	5
Responsible Instructor	Dr. E. Emsiz	
Contact Hours / Week x/x/x/x	6/x/x/x	
Education Period	1	
Start Education	1	
Exam Period	1 2	
Course Language	Dutch English	
Expected prior knowledge	See the requirements of the specific MSc programma students are applying for.	
Summary	Course email: ifeemcs010400@tudelft.nl (please don't use personal email addresses)	
Course Contents	- Solving systems of linear equations (using Gaussian elimination) - Vectors in $\mathbb{R}^n$ - Linear dependence/independence - Matrix algebra (sum, product, inverse) - LU decomposition of a matrix - Linear transformations - Subspaces in $\mathbb{R}^n$ (basis, dimension); column space and null space - Determinants - Eigenvalues and eigenvectors - Diagonalization - Inner products and orthogonal sets - Orthogonal projections - Method of least squares and linear models - Symmetric matrices	
Study Goals	An important goal of the course is to make the student comfortable with fundamental notions from linear algebra. At the end of this course you will be able to understand the connections between these concepts. You may also be asked to come up with proofs for elementary properties (i.e. write down a consistent/correct short proof) and give a correct counterexample. After successfully completing the course you will be able to: - Solve systems of linear equations. - Identify if a system of linear equations is solvable, and if the solution is unique. - Show the equivalence between a vector equation, a matrix equation and a system of linear equations. - Give a geometric description of solutions sets of vector equations. - Determine the linear (in)dependence of a set of vectors and identify the (geometric) properties of linear dependence. - Identify if a transformation is linear and determine the standard matrix of a linear transformation. - Determine the matrix of geometric linear transformations. - Be able to perform matrix operations (sum, scalar multiple, multiplication, transpose) and describe the law-like properties of matrix multiplication and apply these properties. - Describe the properties of invertible matrices, determine the inverse of a non-singular matrix and apply these topics. - Give definitions of subspace, column space and null space of a matrix and determine a basis for a subspace. - Describe and apply the concept of dimension of a linear subspace, rank of a matrix and the rank theorem. - Determine the LU-decomposition of a matrix. - Determine the determinant of a matrix by applying the properties of a determinant. - Apply the properties of determinants (product, transpose, inverse). - Determine the eigenvalues and eigenvectors of a matrix. - Determine the algebraic and geometric multiplicity of a matrix. - Determine if a matrix is diagonalizable and if so, determine a diagonalization of the matrix. - Analyze the case of complex eigenvalues and eigenvectors. - Determine the matrix of a linear transformation with respect to a basis. - Calculate and apply properties of the inner product in the context of orthogonality and orthogonal sets. - Calculate the orthogonal projection on a subspace. - Determine an orthogonal basis of a subspace by means of the Gram-Schmidt process. - Explain the normal equation of the least-squares method and apply the least-squares method to linear models. - Explain and calculate the orthogonal diagonalization of symmetric matrices and describe the spectral theorem for symmetric matrices.	
Education Method	Colstruction	
Literature and Study Materials	Book: David C. Lay et. al., Linear Algebra and its Applications, Global Edition, 6/E. - Slides on Brightspace. - Prelecture videos. - Online homework assignments. - Book exercises - Old exams on Brightspace.	
Assessment	Disclaimer: information may change depending on the developments around the coronavirus. Final score: F IF the midterm score M is higher than the score E for the exam AND $E \geq 5.0$ THEN $F = 0.25 M + 0.75 E$ ELSE $F = E$ All grades are rounded to 1 decimal place. Note that the midterm is not mandatory (and cannot be resited). For the resit the midterm is not relevant anymore.	
Permitted Materials during Tests	None	
Test and result scale	1-10	
Co-Instructor	Dr.ir. R.F. Swarttouw	

IFEEMCS010500	Probability and Statistics	3
Responsible Instructor	Dr. C. Kraaikamp	
Responsible Instructor	Dr. R.J. Fokkink	
Contact Hours / Week x/x/x/x	x/x/4/x or x/x/x/4	
Education Period	3 4	
Start Education	3 4	
Exam Period	3 4 5	
Course Language	Dutch English	
Expected prior knowledge	Linear Algebra, Calculus for Engineering part 1 and part 2 or Calculus for Science part 1 and part 2.	
Course Contents	Graphical and numerical summaries of data Introduction to probability Some elementary combinatorics to find probabilities Conditional probability; Bayes' rule; stochastic (in)dependence Random variables; probability mass function; density function; distribution function Standard distributions: Binomial, Poisson, Geometric, Normal, Uniform, Exponential, Pareto Expectation and variance; transformations; Jensen's inequality Multivariate random variables; joint distributions; joint and marginal density functions; (in)dependence of random variables Covariance and correlation Chebychev's inequality; Law of Large numbers; Central Limit Theorem Sampling theory and statistical models; mean, sample variance, histogram, empirical distribution function, boxplot Theory of Estimators: Bias, Efficiency, Mean squared error Linear Regression: univariate and multivariate, goodness of fit Introduction to statistical learning Confidence intervals of Mean and Proportion; t-distribution Testing theory: Type I/II Error, p-value, significance level, critical region One sample t-test	
Study Goals	At the end of the course, you will be able to: - compute (conditional) probabilities - use discrete and continuous random variables - use joint random variables - compute expectation and (co)variance - apply the law of large numbers and the central limit theorem - analyse data by means of graphical and numerical summaries - formulate a statistical model - estimate parameters - perform a linear regression analysis - construct a confidence interval - formulate and carry out hypothesis tests - Use a computer program to perform elementary simulation and data analysis	
Education Method	Interactive lectures, pre-lecture videos, exercises	
Literature and Study Materials	Book: Mathematical introduction to Probability and Statistics, Dekking et al.	
Assessment	One midterm (week 5) on Part 1: Probability Theory and one endterm (week 10) on Part 2: Statistics. Final grade is the average of both tests. To pass the course, the grade for part 2 needs to be at least 4 or higher.	
Permitted Materials during Tests	1) Formula sheet to be used for exams of Probability and Statistics 2) Any kind of calculator	
Remarks	Please note that this course is available in Q3 and in Q4.	
Co-Instructor	Dr. C. Kraaikamp	
Co-Instructor	Dr. R.J. Fokkink	

IFEEMCS012100	Calculus for Engineering, part 1	3
Responsible Instructor	Dr. E. Emsiz	
Contact Hours / Week x/x/x/x	4/x/x/x	
Education Period	1	
Start Education	1	
Exam Period	1 2	
Course Language	Dutch English	
Expected prior knowledge	See the requirements of the specific MSc programma students are applying for.	
Co-Instructor	Dr.ir. N.P.K. Chan	

IFEEMCS012200	Calculus for Engineering, part 2	3
Responsible Instructor	Dr. E. Emsiz	
Contact Hours / Week x/x/x/x	x/4/x/x	
Education Period	2	
Start Education	2	
Exam Period	2 3	
Course Language	Dutch English	
Co-Instructor	Dr.ir. N.P.K. Chan	

IFEEMCS012300	Calculus for Engineering, part 3	3
Responsible Instructor	Dr.ir. R.F. Swarttouw	
Contact Hours / Week x/x/x/x	x/x/4/x	
Education Period	3	
Start Education	3	
Exam Period	3 4	
Course Language	Dutch English	
Expected prior knowledge	Calculus for Engineering 2 (IFEEMCS012200) or a similar course.	
Course Contents	Line integrals and surface integrals. Integral theorems of Green, Stokes and Gauss. Sequences and series. Power series and Taylor series.	
Study Goals	After this course the student should be able to 1. find parametrizations of curves and surfaces (in 2D and 3D); 2. calculate a line integral or a surface integral of a function or a vector field; 3. mention the physical interpretation of these line and surface integrals; 4. define and formulate the physical meaning of concepts like gradient, curl and divergence; 5. calculate line and surface integrals via one of the integral theorems (Green, Stokes, Gauss) 6. determine whether a sequence is convergent or divergent, for example by calculating its limit; 7. determine whether a series is convergent or divergent with a test for convergence: Integral Test, (Limit) Comparison Test, Ratio or Root Test; 8. determine the interval of convergence of a power series; 9. determine the Taylor series of a simple analytic function, for example $\sin(x)$, $\cos(x)$, $\exp(x)$, $\ln(1+x)$, $\arctan(x)$, $(1+x)^a$.	
Education Method	Lectures (per week 2x2 hours).	
Books	Calculus, Volume 1, 2 and 3. Edwin Herman, Gilbert Strang. ISBN-13 978-1-947172-13-5, 978-1-947172-14-2, 978-1-947172-16-6 This is an open source book that also will be made available (for free) via Brightspace.	
Assessment	On-campus exams. Partly digital, partly written. See Brightspace for more details. There will be two partial exams, of 90 minutes each: - The first partial exam is about vector calculus; - The second partial exam is about sequences and series. The final grade is the average of the grades for the two partial exams. There is only one resit, about the complete course, that lasts 180 minutes. It is NOT possible to resit only one partial exam.	
Permitted Materials during Tests	A formula sheet (see Brightspace). NO calculators allowed.	
Co-Instructor	Dr. F.J. van de Bult	

WI1909TH	Differential Equations	3
Responsible Instructor	Drs. I.A.M. Goddijn	
Contact Hours / Week x/x/x/x	0/4/0/0	
Education Period	2	
Start Education	2	
Exam Period	2 3	
Course Language	Dutch	
Expected prior knowledge	Calculus and Linear Algebra	
Course Contents	Linear differential Equations, Systems of first order, linear and not-linear differential equations, Partial differential equations and Fourier series.	
Study Goals	Learning a number of mathematical techniques necessary for solving various technical-physical model equations.	
Education Method	Colstruction	
Books	Elementairy Differential Equations and Boundary Value Problems, Global Edition ISBN-13: 978-1-119-38287-4 (preferable) or Elementairy Differential Equations and Boundary Value Problems, International Adaptation ISBN-13: 978-1-119-82051-2	
Assessment	Exam with open questions. Due to circumstances (such as Covid-19) this can become an online exam, even in a different format. In case of insufficient results a repair option may exist in accordance with Article 2, Examination requirements, Clause 4, of the Implementation Regulations 2023-2024.	
Permitted Materials during Tests	Announced during lectures and on Brightspace
